1 About these operating instructions
   1.1 Manufacturer 10
   1.2 Laws, standards and directives 10
   1.3 Language 10
   1.4 For your information 10
      1.4.1 Warnings 10
      1.4.2 Markups 10
   1.5 Type number and model 11
   1.6 Frame number 11
   1.7 Identifying the operating instructions 11
   1.8 Aim of the operating instructions 12

2 Safety
   2.1 Residual risks 13
      2.1.1 Risk of fire and explosion 13
         2.1.1.1 Rechargeable battery 13
         2.1.1.2 Overheated charger 13
         2.1.1.3 Hot components 13
      2.1.2 Electric shock 14
         2.1.2.1 Damage 14
         2.1.2.2 Water penetration 14
         2.1.2.3 Condensation 14
      2.1.3 Risk of a crash 14
         2.1.3.1 Incorrect quick release setting 14
         2.1.3.2 Incorrect tightening torque 14
         2.1.3.3 Incorrect component 14
      2.1.4 Risk of amputation 14
      2.1.5 Key breaking off 14
      2.1.6 Malfunctions due to Bluetooth® 15
      2.1.7 Data privacy information 15
   2.2 Toxic substances 16
      2.2.1 Brake fluid 16
      2.2.2 Defective battery 16
   2.3 Requirements for the rider 16
   2.4 Vulnerable groups 16
   2.5 Personal protective equipment 16
   2.6 Safety guards 16
   2.7 Safety markings and safety instructions 17
   2.8 What to do in an emergency 17
      2.8.1 Dangerous situation in road traffic 17
      2.8.2 Leaked brake fluid 17
      2.8.3 Battery vapours emitted 18
      2.8.4 Battery fire 18

3 Description
   3.1 Proper use 19
      3.1.1 Improper use 20
   3.1.2 Permitted total weight (PTW) 21
   3.1.3 Environmental requirements 22
   3.2 Nameplate 24
   3.3 Components 25
      3.3.1 Overview 25
      3.3.2 Chassis 26
      3.3.2.1 Frame 26
      3.3.2.2 Steering system 26
3.3.2.3 Steering headset 26
3.3.2.4 Stem 26
3.3.2.5 Handlebars 27
3.3.2.6 Fork 27
3.3 Suspension 28
3.3.3.1 Rigid fork 28
3.3.3.2 Suspension fork 28

3.5.8 BOSCH PowerTube 750 battery 55
4 Transporting and storing
   4.1 Weight and dimensions for transportation  58
   4.2 Designated handles, lifting points  58
   4.3 Transportation  59
   4.3.1 Using the transport securing system  59
   4.3.2 Transporting the pedelec  59
   4.3.3 Shipping a pedelec  59
   4.3.4 Transporting the battery  59
   4.3.5 Shipping the battery  59
   4.4 Storing  60
      4.4.1 Break in operation  60
      4.4.1.1 Preparing a break in operation  60
      4.4.1.2 Carrying out a break in operation  60

5 Assembly
   5.1 Unpacking  61
   5.2 Required tools  61
   5.3 Commissioning  62
      5.3.1 Checking the battery  62
      5.3.1.1 Securing the PowerTube BS3 battery mount  63
      5.3.2 Preparing the wheel  64
      5.3.3 Installing the wheel in the SUNTOUR fork  65
      5.3.3.1 Screw-on axle (12AH2 and 15AH2)  65
      5.3.3.2 20 mm cross axle  66
      5.3.3.3 Q-LOC quick release  68
      5.3.4 Fitting the pedals  69
      5.3.5 Preparing the LIMOTEC seat post  70
      5.3.6 Checking the stem and handlebars  71
      5.3.6.1 Checking the connections  71
      5.3.6.2 Checking stem is firmly in position  71
      5.3.6.3 Checking the headset backlash  71
   5.4 Pedelec sale  71

6 Operation
   6.1 Risks and hazards  72
   6.2 Tips for a greater range  74
   6.3 Error message  75
      6.3.1 On-board computer  75
      6.3.1.1 Less critical errors  75
      6.3.1.2 Critical errors  75
      6.3.2 Rechargeable battery  75
   6.4 Instruction and customer service  76
   6.5 Adjusting the pedelec  76
      6.5.1 Preparing  76
      6.5.2 Pedelec adjustment procedure  77
      6.5.3 Determining the sitting position  78
      6.5.4 Adjusting the saddle  80
      6.5.4.1 Straightening the saddle  80
      6.5.4.2 Adjusting the saddle height  80
      6.5.4.3 Setting the saddle height with the remote control  81
      6.5.4.4 Adjusting the saddle position  82
      6.5.4.5 Adjusting the saddle tilt  82
      6.5.4.6 Checking saddle stability  82
      6.5.5 Handlebars  83
      6.5.5.1 Handlebar width  83
      6.5.5.2 Hand position  83
6.5.5.3 Adjusting the handlebars
6.5.6 Stem
6.5.6.1 Adjusting the handlebar height with quick release
6.5.6.2 Setting the quill stem
6.5.6.3 Adjusting the Ahead stem
6.5.6.4 Adjusting the angle-adjustable stem
6.5.7 Ergonomic handles
6.5.7.1 Checking handlebar stability
6.5.8 Tyres
6.5.9 Brake
6.5.9.1 Brake handle position
6.5.9.2 Brake handle tilt angle
6.5.9.3 Determining the grip distance
6.5.9.4 Retracting the brake linings
6.5.10 Tyres
6.5.10.1 Grip distance on a SHIMANO ST-EF41 brake lever
6.5.10.2 Grip distance on a SHIMANO ST-EF41 brake lever
6.5.11 Suspension
6.5.12 Fork sag
6.5.12.1 Adjusting the Suntour fork steel suspension
6.5.12.2 Adjusting the Suntour fork air suspension
6.5.13 Adjust the rear frame damper sag
6.5.13.1 Adjusting the Suntour rear frame damper
6.5.14 Fork rebound damping
6.5.14.1 Adjusting the Suntour fork rebound damping
6.5.15 Adjusting the rear frame damper rebound damper
6.5.15.1 Adjusting the Suntour rear frame damper
6.5.16 Compression adjuster on rear frame damper
6.5.16.1 Adjusting the Suntour compression adjuster
6.5.17 Lighting
6.5.17.1 Adjusting the lights
6.5.18 On-board computer
6.5.18.1 Creating a user account
6.5.18.2 Connecting the on-board computer with the smartphone
6.5.18.3 Update software
6.5.18.4 Activating activity tracking
6.5.18.5 Setting up the lock function (optional)
6.5.18.6 Inserting the display
6.5.18.7 Securing the on-board computer (optional)
6.5.18.8 Removing the on-board computer
6.5.18.9 Adjust on-board computer
6.5.18.10 Adjust on-board computer
6.5.18.11 Selects the language
6.5.18.12 Adjusting the clock
6.5.18.13 Adjusting the time format
6.5.18.14 Selecting units
6.5.18.15 Setting the brightness
6.5.18.16 Reset settings
6.6 Accessories
6.6.1 Child seat
6.6.2 Trailer
6.6.2.1 Approval for trailer with Enviolo hub
6.6.2.2 Approval for trailer with ROHLOFF hub
6.6.3 Mobile holder
6.6.4 Tubeless and airless tyres
6.6.5 Suspension fork coil spring
6.6.6 Pannier rack
6.6.7 Panniers and cargo boxes
6.7 Personal protective equipment and accessories for road safety
Contents

6.8 Before each ride  116
6.9 Straightening the quickly adjustable stem  117
6.10 Using the pannier rack  117
6.11 Raising the kickstand  118
6.12 Using the saddle  118
6.12.1 Using the leather saddle  118
6.13 Using the pedals  118
6.14 Using the multifunctional handlebars or bar ends  118
6.14.1 Using leather handles  118
6.15 Using the bell  118
6.16 Using the battery  119
6.16.1 Removing the battery  119
6.16.1.1 Inserting the battery  119
6.16.2 Charging the battery  120
6.17 Using pedelec with the electric drive system  121
6.17.1 Switching on the electric drive system  121
6.17.2 Switching off the electric drive system  121
6.18 Using the on-board computer  122
6.18.1 Using the diagnosis port  122
6.18.2 Charging the control panel battery  122
6.18.3 Using the riding light  123
6.18.4 Setting the brightness of indicators  123
6.18.5 Using the push assist system  123
6.18.6 Selecting the level of assistance  124
6.19 Brake  125
6.19.1 Using the brake lever  125
6.20 Gear shift  126
6.20.1 Using the derailleurs  126
6.21 Parking  127
6.21.1 Screwing in the quickly adjustable stem  128
6.21.2 Activating the lock function  129

7 Cleaning, servicing and maintenance

7.1 Before each ride  134
7.1.1 Checking the guards  134
7.1.2 Checking the frame  134
7.1.3 Checking the fork  134
7.1.4 Checking the rear frame damper  134
7.1.5 Checking the pannier rack  134
7.1.6 Checking the guards  134
7.1.7 Checking wheel concentricity  134
7.1.8 Checking the quick releases  134
7.1.9 Checking the suspension seat post  134
7.1.10 Checking the bell  135
7.1.11 Checking the handles  135
7.1.12 Checking the USB cover  135
7.1.13 Checking the lighting  135
7.1.14 Checking the brake  135
7.2 After each ride  136
7.2.1 Cleaning the lights and reflectors  136
7.2.2 Cleaning the suspension fork  136
7.2.3 Caring for the suspension fork  136
7.2.4 Cleaning the pedals  136
7.2.5 Cleaning the brake  136
7.2.6 Cleaning the suspension seat post  136
7.2.7 Cleaning the rear frame damper  136
7.3 Basic cleaning  137
7.3.1 On-board computer and control panel  137
7.3.2 Rechargeable battery  137

8 Maintenance

8.1 Initial inspection 159
8.2 Maintenance 159
8.3 Component-specific maintenance tasks 159
8.4 Carry out initial inspection 162
8.5 Maintenance instructions 163
8.5.1 Servicing the frame 170
8.5.1.1 Servicing the carbon frame 170
8.5.2 Checking the pannier rack 170
8.5.3 Servicing axle with quick release 170
8.5.4 Maintaining the stem 171
8.5.5 Servicing the gear hub 171
8.5.5.1 Adjusting the hub with cone bearing 171
8.5.6 Servicing the steering headset 172
8.5.7 Servicing the fork 172
8.5.7.1 Servicing the carbon suspension fork 173
8.5.7.2 Servicing the suspension fork 173
8.5.8 Servicing seat post 174
8.5.8.1 Servicing the carbon seat post 174
8.5.8.2 by.schulz suspension seat post 175
8.5.8.3 Suntour suspension seat post 175
8.5.8.4 eightpins NGS2 seat post 176
8.5.8.5 eightpins H01 seat post 182
8.5.9 Rear frame damper 186
8.5.9.1 FOX component-specific maintenance 187

9 Troubleshooting, fault clearance and repair

9.1 Troubleshooting and fault clearance 188
9.1.1 Drive system or on-board computer does not start up 188
9.1.2 Errors in assistance function 189
9.1.3 Battery errors 190
9.1.4 Display screen errors 191
9.1.5 Lighting does not work 191
Contents

9.1.6 Other errors 192
9.1.7 Suntour suspension fork 193
9.1.7.1 Rebound too fast 193
9.1.7.2 Rebounding too slowly 194
9.1.7.3 Suspension too soft on inclines 195
9.1.7.4 Excessively hard damping on bumps 196
9.1.8 Rear frame damper 197
9.1.8.1 Rebound too fast 197
9.1.8.2 Rebounding too slowly 198
9.1.8.3 Suspension too soft on inclines 199
9.1.8.4 Excessively hard damping on bumps 200
9.2 Repair 201
9.2.1 Original parts and lubricants 201
9.2.2 Replacing the lighting 201
9.2.3 Setting the front light 201
9.2.4 Checking tyre clearance 201
9.2.5 Replacing pedelec components if lock function is installed 202
9.2.5.1 Replacing a smartphone 202
9.2.5.2 Replacing the on-board computer 202
9.2.5.3 Activating the lock function after motor replacement 202

Thank you for your trust!

BULLS pedelecs are premium quality vehicles. You have made an excellent choice. Your specialist dealer will provide you with guidance and instruction and assemble your product. Your specialist dealer will also be happy to assist you in the future, whether you require maintenance, conversion or repair.

You are receiving these operating instructions with your new pedelec. Please take time to become familiar with your new pedelec. Use the tips and suggestions in the operating instructions. They will help you to enjoy your pedelec for a long time to come. We hope you have fun and wish you well on all of your rides!

Download the operating instructions onto your phone at the following link, so that you can use them when you are out riding:

tecdoc@zeg.de
1 About these operating instructions

1.1 Manufacturer

ZEG Zweirad-Einkaufs-Genossenschaft eG
Longericher Strasse 2
50739 Köln, Germany

Tel.: +49 221 17959 0
Fax: +49 221 1795931
E-mail: info@zeg.de

1.2 Laws, standards and directives

The operating instructions comply with the essential requirements specified in:

• Machinery Directive 2006/42/EC
• Electromagnetic Compatibility Directive 2014/30/EU
• ISO 20607:2018 Safety of machinery – Instruction handbook – General drafting principles
• EN 15194:2018 Cycles – Electrically power assisted cycles – pedelec bicycles
• EN 11243:2016, Cycles – Pannier racks for bicycles – Requirements and test methods
• ISO 17100:2016-05 Translation Services – Requirements for translation services.

1.3 Language

The original operating instructions are written in German. A translation is invalid without the original operating instructions.

1.4 For your information

Different markings are used in the operating instructions to make them easier to read.

1.4.1 Warnings

Warnings indicate hazardous situations and actions. You will find three warnings in the operating instructions:

WARNING

May lead to serious or even fatal injuries if ignored. Medium-risk hazard.

CAUTION

May lead to minor or moderate injuries if ignored. Low-risk hazard.

Notice

May lead to material damage if ignored.

1.4.2 Markups

You will find ten text markups in the operating instructions:

Table 1: Markups

Table 2: Type number, model and pedelec type

1.6 Frame number

Each frame has an individual frame number stamped on it (see Figure 2). The frame number can be used to associate the pedelec with the owner. The frame number is the most important identifier for verifying ownership.

1.7 Identifying the operating instructions

The operating instructions identification number is located in bottom left-hand corner of each page.

The identification number is composed of the document number, the version number and the release date.

**Identification number**  MY22B0a - 62_1.0_15.09.2021
1.8 Aim of the operating instructions

These operating instructions are not a substitute for personal instruction by the specialist dealer supplying the bike. These operating instructions are an integral part of the pedelec. Therefore, if it is re-sold at a later time, they must be handed over to the subsequent owner.

These operating instructions are mainly designed for riders and operators of the pedelec.

Paragraphs with a white background are intended to enable non-professionals to make safe settings on the pedelec, use it, clean it and identify and eliminate any faults.

Sections intended for technical staff are highlighted in blue and marked with a spanner symbol.

These paragraphs aim to allow trained technical staff (bicycle mechatronics engineers, bicycle mechanics or similar) to carry out initial assembly, adjustment, maintenance and repair safely.

Technical staff also need to read all sections for riders and operators to ensure they can provide a better customer service.

All documents in Section 11 need to be filled out whenever any work is performed on the vehicle (assembly report, maintenance report).

Table 3: Target groups-section matrix
2 Safety

2.1 Residual risks

2.1.1 Risk of fire and explosion

2.1.1.1 Rechargeable battery

The safety electronics may fail if the batteries are damaged or faulty. The residual voltage can cause a short circuit. The battery may self-ignite and explode.

- Only use and charge the battery and accessories if they are in perfect condition.
- Never open or repair the battery.
- Batteries with external damage must be removed from service immediately.
- If a battery is dropped or struck, remove it from service and keep it under observation for at least 24 hours.

If a charger is connected to the drive system when the drive system reports a critical error, the battery may be damaged permanently and may catch fire.

- Connect charger to error-free drive system only.

The battery is only protected from spray water. Penetration by water can cause a short circuit. The battery may self-ignite and explode.

- Never immerse battery in water.
- Take battery out of service if you suspect water has penetrated it.

Temperatures over 60 °C can also cause liquid to leak from the battery and the battery will become damaged. The battery may self-ignite and explode.

- Protect the battery against heat.
- Never store next to hot objects.
- Never expose battery to continuous direct sunlight.
- Avoid wide temperature fluctuations.

Chargers with excessive voltage damage batteries. This may cause a fire or an explosion.

- Only use approved batteries to charge.

Metal objects may interconnect the battery's electrical terminals. The battery may self-ignite and explode.

- Never insert paper clips, screws, coins, keys and other small parts into the battery.
- Place the battery on clean surfaces only. Prevent charging socket and contacts against contamination from dirt, sand and similar.

Faulty batteries are hazardous goods.

- Dispose of faulty batteries in the correct manner.
- Store battery in a dry place until disposal.
- Never store near flammable substances.

2.1.1.2 Overheated charger

The charger heats up when charging the battery. If the battery is not allowed to cool down sufficiently, it can cause a fire or burns to the hands.

- Never use charger on a highly flammable surface.
- Never cover the charger during charging.
- Never leave battery unattended during charging.

2.1.1.3 Hot components

The brakes and the motor may become very hot during operation. There is a risk of burns or fire in case of contact.

- Never touch the brakes or the motor immediately after a ride.
- Never place the pedelec on a flammable surface, such as grass or wood, directly after use.
2.1.2 Electric shock

2.1.2.1 Damage

Damaged chargers, cables and plug connectors increase the risk of electric shock.

► Check the charger, cable and plug connector before each use. Never use a damaged charger.

2.1.2.2 Water penetration

If water penetrates into the charger, there is a risk of electric shock.

► Never charge the battery outdoors.

2.1.2.3 Condensation

Condensation may form in the charger and in the battery when the temperature changes from cold to hot, causing a short circuit.

► Wait until both charger and battery are at room temperature before connecting them.

2.1.3 Risk of a crash

2.1.3.1 Incorrect quick release setting

Excessively high clamping force will damage the quick release and cause it to lose its function. Insufficient clamping force will result in unfavourable transmission of force. This can cause components to break. This will cause a crash with injuries.

► Never fasten a quick release using a tool (e.g. hammer or pliers).

► Only use the clamping lever with the specified set clamping force.

2.1.3.2 Incorrect tightening torque

If a screw is fastened too tightly, it may break. If a screw is not fastened enough, it may loosen. This will cause a crash with injuries.

► Always observe the indicated tightening torque on the screw or in the operating instructions.

2.1.3.3 Incorrect component

The wheels are designed exclusively for use with rim brakes or disc brakes. The wheel may break if an incorrect brake is used. This will cause a crash with injuries.

► Never use the wheel with a different brake.

2.1.4 Risk of amputation

The brake disc in disc brakes is so sharp that it can cause serious injuries to fingers if they are inserted into the brake disc openings.

► Always keep fingers well away from the rotating brake discs.

2.1.5 Key breaking off

If you leave a key inserted when riding or transporting the pedelec, it may break off or the locking system may open accidentally.

► Pull the key from the battery lock.
2.1.6 Malfunctions due to Bluetooth®

If you use the on-board computer with Bluetooth® and/or Wi-Fi®, it may cause interference with other devices, other equipment, aircraft, and medical devices, such as pacemakers and hearing aids.

Likewise, harm to people and animals in the immediate vicinity cannot be completely excluded.

► Never use the pedelec with Bluetooth® when in close proximity to medical devices, filling stations, chemical plants, areas at risk of explosion and in blasting zones.

► Never use pedelec with Bluetooth® in aircraft.

► Avoid operating for longer periods in close proximity to the body.

2.1.7 Data privacy information

When the pedelec is connected to the BOSCH diagnosis tool 3, data is transferred to BOSCH eBike Systems (Robert Bosch GmbH) on the use of the Bosch drive unit, including its energy consumption and temperature, to help improve the product.

You will find more information on the Bosch eBike website:

2.2 Toxic substances

2.2.1 Brake fluid
Brake fluid may leak out after an accident or due to material fatigue. Brake fluid can be fatal if swallowed or inhaled.
► Never dismantle the brake system.
► Avoid contact with skin.
► Do not inhale vapours.

2.2.2 Defective battery
Liquids and vapours may leak from damaged or faulty batteries. Excessively high temperatures may also cause liquids and vapours to leak from the battery. Such liquids and vapours can irritate the airways and cause burns.
► Never dismantle the battery.
► Avoid contact with skin.
► Do not inhale vapours.

2.3 Requirements for the rider
The rider must have adequate physical, motor and mental abilities to ride on public roads. A minimum age of 14 years is recommended.

2.4 Vulnerable groups
Keep batteries and the charger away from children and people with reduced physical, sensory or mental capacities or lacking in experience and knowledge.

If minors use the pedelec, a legal guardian must provide them with comprehensive instructions.

2.5 Personal protective equipment
► Wear a suitable helmet. The helmet must have a reflective strip or a light in a clearly visible colour.
► Wear sturdy shoes.
► Wear clothing which is as bright or retroreflective as possible. Fluorescent materials are also suitable. High-visibility jackets and straps on your upper body ensure even greater safety. Never wear a skirt. Always wear trousers which reach down to your ankles instead.

2.6 Safety guards
Three safety guards on the pedelec protect riders against heat or moving parts:
• Chain or belt guards prevent clothing from being pulled into the drive train.
• The motor cover on the motor casing protects against heat.
• Mudguards protect against dirt and water splashing up from the road.
► Never remove the guards.
► Check the guards on a regular basis.
► Take pedelec out of service if a guard is damaged or missing. Contact your specialist dealer.
2.7 Safety markings and safety instructions

The pedelec and battery nameplates contain these safety markings and safety instructions:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>!</td>
<td>General warning</td>
</tr>
<tr>

Table 5: Safety instructions

2.8 What to do in an emergency

2.8.1 Dangerous situation in road traffic

- If you encounter any hazards or dangers in road traffic, apply the brake on the pedelec until it comes to a halt. The brake acts as an emergency stop system in such cases.

2.8.2 Leaked brake fluid

- Remove those affected from the danger area to fresh air.
- Never leave those affected unattended.
- Immediately remove any clothing items contaminated with brake fluid.
- Never inhale vapours. Ensure sufficient ventilation.
- Wear gloves and safety gloves as protective equipment.
- Keep unprotected persons away.
- Take care with leaked brake fluid as it poses a slip hazard.
- Keep leaked brake fluid away from naked flames, hot surfaces and sources of ignition.
- Avoid contact with skin and eyes.

After inhalation

- Take in fresh air. Immediately consult a doctor in case of any discomfort.

After skin contact

- Wash affected skin with soap and water and rinse well. Remove contaminated clothing. Consult doctor in the event of pain or discomfort.

After contact with eyes

- Rinse eyes under flowing water for at least ten minutes with the lids open; also rinse under lids. Immediately consult a doctor in case of any pain or discomfort.
Safety

After swallowing

► Rinse out mouth with water. Never induce vomiting. Risk of aspiration.
► If a person is lying on their back and vomiting, place them in the recovery position. Seek medical advice immediately.

Environmental protection measures

► Never allow brake fluid to flow into the sewage system, water courses or groundwater.
► Notify the relevant authorities if fluid penetrates the ground, water courses or the sewage system.
► Dispose of leaked brake fluid in an environmentally responsible way in accordance with statutory regulations (see Section 10.1).
► The brake system must be repaired immediately if brake fluid leaks out. Contact your specialist dealer.

2.8.3 Battery vapours emitted

Vapours may be emitted if the battery is damaged or used improperly. The vapours may cause respiratory tract irritation.
► Get into fresh air.
► Consult doctor in the event of pain or discomfort.

After contact with eyes

► Carefully rinse eyes with plenty of water for at least 15 minutes. Protect unaffected eye. Seek medical advice immediately.

After skin contact

► Remove any solid particles immediately.
► Rinse the affected area with plenty of water for at least 15 minutes. Then dab the affected skin gently. Do not rub dry.
► Remove contaminated clothing immediately.
► Immediately consult a doctor if there is any redness, pain or discomfort.

2.8.4 Battery fire

The safety electronics may fail if the battery is damaged or faulty. The residual voltage can cause a short circuit. The battery may self-ignite and explode.

1 Keep your distance if the battery becomes deformed or starts to emit smoke.
2 If charging, remove the plug connector from the socket.
3 Contact the fire service immediately.
► Use Class fire extinguishers to put out the fire.
► Never extinguish damaged batteries with water or allow them to come into contact with water.

Inhaling vapours can cause intoxication.
► Stand on the side of the fire where the wind is blowing from.
► Use breathing apparatus if possible.
3 Description

3.1 Proper use

All check lists and instructions for actions in these operating instructions must be met. Approved accessories can be installed by specialist staff.

Use the pedelec when it is in perfect, proper working order only. National requirements may apply to the pedelec which the standard equipment may not meet. Different regulations apply across the country to the riding light, reflectors and other components when riding on public roads. The general laws and the regulations for the prevention of accidents and environmental protection in the respective country of use must be adhered to.

The rechargeable batteries are designed to supply power to the pedelec motor only. Never use the batteries for other purposes.

A compatible smartphone with the eBike Flow app, available from the Apple App Store or the Google Play Store, is required to use the on-board computer to its full extent.

Each pedelec is assigned a pedelec type, which determines its proper use, function and area of use.

<table>
<thead>
<tr>
<th>City and trekking bicycle</th>
<th>Cycle for children and young adults</th>
<th>Mountain bike</th>
<th>Racing bicycle</th>
<th>Cargo bike</th>
<th>Folding bicycle</th>
</tr>
</thead>
<tbody>
<tr>
<td>City and trekking bicycles are designed for comfortable, daily use and are suitable for riding on public roads.</td>
<td>Cycles for children and young adults are suitable for riding on public roads.</td>
<td>Mountain bikes are designed for sports use. Its specific design features are tyres with a thick tread, a reinforced frame structure and a wide transmission range.</td>
<td>Racing bikes are designed for fast rides on roads and paths with a good, undamaged road surface.</td>
<td>Cargo bikes are suitable for transporting loads on public roads on a daily basis.</td>
<td>Folding bicycles are suitable for riding on public roads.</td>
</tr>
<tr>
<td>Legal guardians must read the operating instructions before putting the bike into use. Tell children and young people what the operating instructions contain in a way appropriate to their age.</td>
<td>In addition to being physically fit, riders need time to adapt to using the pedelec. Appropriate training is required for its use. It is especially important to practice braking and riding around bends.</td>
<td>Mountain bikes are sports bikes and not a means of transport. In addition to being physically fit, riders need time to adapt to using the pedelec. Appropriate training is required for its use. It is especially important to practice braking and riding around bends.</td>
<td>Racing bikes are sports bikes and not a means of transport. Racing bikes are characterised by their lightweight structure and a design which is stripped to the minimum parts required for riding.</td>
<td>The transportation of loads requires skill and physical fitness in order to balance the additional weight. The very varied loading conditions and weight distributions require special practice and skill when braking and riding in bends.</td>
<td>Folding bikes can be folded together and thus save space when they are transported, e.g. in cars or on local transport.</td>
</tr>
<tr>
<td>Check the size of the pedelec every 3 months for orthopaedic reasons.</td>
<td>The strain on hands, wrists, arms, shoulders, the neck and back is considerable. Inexperienced riders tend to brake too hard and lose control as a result.</td>
<td>The frame geometry and the layout of the operating elements are designed to allow the bike to be ridden at high speeds. Learning how to ride slowly, apply the brakes and get on and off the bike safely takes practice due to the frame design.</td>
<td>The sitting position is athletic. The strain on hands, wrists, arms, shoulders, the neck and back is considerable. The sitting position requires a high level of physical fitness.</td>
<td>A longer period is required to adaptation to the length, width and turning circle. You need to be cautious when riding a cargo bike. You must pay attention to the traffic on public roads and the condition of the route accordingly.</td>
<td>The folding function of the folding bicycle makes it necessary to use smaller wheels and longer brake cables and Bowden cables. With increased strain, you should therefore expect a reduction in riding stability, braking power, comfort and durability.</td>
</tr>
</tbody>
</table>

Table 6: Proper use for every type of Pedelec
3.1.1 Improper use

Failure to adhere to the proper use poses a risk of personal injury and material damage. It is prohibited to use the pedelec in the following ways:

- when the electrical drive system has been manipulated
- riding with a damaged or incomplete pedelec
- riding over steps
- riding through deep water
- charging with an incorrect charger
- lending the pedelec to untrained riders
- carrying other people
- riding with excessive baggage
- riding with no hands
- riding on ice and snow
- improper servicing
- improper repair
- tough areas of use, such as professional competitions
- stunt riding or acrobatics.

Table 8: Type number, model and PTW
3.1.3 Environmental requirements

You can ride the pedelec within a temperature range between -5 °C and +40 °C. The electric drive system is limited in its performance outside this temperature range.

**Operating temperature**

-5... +40 °C

During winter use, especially at temperatures below 0 °C, we recommend that you don’t insert a battery charged and stored at room temperature into the pedelec until just before setting off. We recommend using thermal protection sleeves when riding longer distances at low temperatures.

Temperatures under -10 °C and over +60 °C must be avoided as a general rule. Never put the battery in a car in summer or store it in direct sunlight.

You must also keep within the following temperature ranges:

- **Transportation temperature**: +10... +40 °C
- **Storage temperature**: +10... +40 °C
- **Work environment temperature**: +15... +25 °C
- **Charging temperature**: +10... +40 °C

The nameplate contains symbols for the pedelec’s area of use.

- Check what tracks and roads you may ride on before setting off for the first time.

3.3.2 Chassis

The chassis comprises two components:

- Frame and
- steering system.

3.3.2.1 Frame

The frame absorbs all forces which act on the pedelec from body weight, pedalling and the ground. The frame also acts as a carrier for most components.

The frame geometry determines the pedelec’s ride performance.

3.3.2.2 Steering system

The steering system components are:

- Steering headset
- Stem
- Handlebars
- Fork.

3.3.2.3 Steering headset

The steering headset (also known as a bike headset or simply a headset) is the fork bearing system in the frame. A distinction is made between two different types:

- Conventional steering headsets for fork steerers with thread and
- Steering headsets for threadless fork steerers, what are known as headsets.

3.3.2.4 Stem

The stem is the connecting component between the handlebars and the fork steerer tube. The stem is used to adjust the handlebars to the rider. The stem is used to adjust the handlebar height and the gap between the handlebars and saddle (see Section 6.5.6).

Quickly adjustable stems

Quickly adjustable stems are an extension to the fork steerer. You can change the height and angle of quickly adjustable stems without any tools. Up to 3 settings can be adjusted, depending on the model:
3.3.2.5 Handlebars

The pedelec is steered using the handlebars. The handlebars are used to support the upper body and is the mount for most controls and displays (see Section 3.4.1).

![Figure 5: Handlebar dimensions](image)

The main structural dimensions of handlebars are:

1. Rise (height)
2. Width
3. Backsweep

3.3.2.6 Fork

The stem and handlebars are attached to the top end of the fork steerer. The axle is fastened to the fork ends. The wheel is fastened to the axle.

![Figure 6: Overview of fork](image)

1. Fork steerer
2. Side reflectors (optional)
3. Fork end
4. Fork leg
3.3.3  Suspension

Both forks and suspension forks are fitted in this model series.

3.3.3.1  Rigid fork

Rigid forks do not feature suspension. They transfer the used muscle and motor power to the road to optimum effect. Pedelecs with rigid forks consume less energy on steep roads and have a greater range than pedelecs with suspension.

3.3.3.2  Suspension fork

A fork deflects when a steel spring, air suspension, or both suspension types act on it. Unlike rigid forks, suspension forks improve contact with the ground and thus enhance comfort using two functions: suspension and damping. The suspension in a pedelec prevents an impact, such as one caused by a stone lying in the pedelec's path, from being channelled directly into the body via the fork. The impact is absorbed by the suspension system instead. This causes the suspension fork to compress.

After compressing, the suspension fork returns to its original position. If the bike has a damper, the damper will slow this movement down. It thus prevents the suspension system from springing back in an uncontrolled manner and the fork from oscillating up and down. Dampers which dampen compressive deflection movements, i.e. a compression load, are called compression dampers or compression dashpots.

Dampers which dampen rebound deflection movements, i.e. a rebound load, are called rebound dampers or dashpots.

The compression can be disabled in any suspension fork. A suspension fork will then behave like a rigid fork.

The stem and the handlebars are fastened to the fork steerer. The wheel is fastened to the axle.

Figure 7: Without suspension (1) and with suspension (2)
Negative deflection (sag)

The negative deflection (sag) is the percentage of total deflection that is compressed by body weight, including equipment (such as a backpack), the seating position and frame geometry. Sag is not caused by riding. The pedelec rebounds at a controlled speed if it is optimally adjusted. The wheel stays in contact with the ground when passing over bumps (blue line). The fork head, handlebars and body follow terrain (green line) when riding over bumps. The suspension motion is predictable and controlled.

Figure 8: Optimum fork riding performance

When optimally adjusted, the fork counteracts deflection on hilly terrain and stays higher in its deflection range. This makes it easier to maintain speed when riding over hilly sections of terrain.

Figure 9: Optimum fork riding performance on hilly terrain

When optimally adjusted, the fork deflects quickly and unhindered when the bike hits bumps and absorbs a bump. Traction is retained (blue line). The fork responds quickly to the bump. The headset and handlebars rise slightly when absorbing a bump (green line).

Figure 10: Optimum fork riding performance over bumps
**Rebound damping**
*Only applies to pedelecs with this equipment*

Rebound damping defines the speed at which the suspension rebounds after being loaded. Rebound damping controls the suspension fork extension and rebound speed, which, in turn, has an impact on traction and control.

Rebound damping can be adjusted to body weight, spring stiffness, deflection, the terrain and the rider's preferences.

If the air pressure or spring stiffness increases, the extension and rebound speeds also increase.

Rebound damping needs to be increased to achieve an optimal setting if the air pressure or spring stiffness are increased.

The damper rebounds at a controlled speed if the fork is optimally adjusted. The wheel stays in contact with the ground when passing over bumps (blue line).

The fork head, handlebars and body follow terrain (green line) when riding over bumps. The suspension motion is predictable and controlled.

---

![Figure 11: Optimum fork riding performance](image)

**Suspension fork compression adjustment**
*Only applies to pedelecs with this equipment*

The compression adjuster allows the rider to make quick adjustments to the fork's suspension behaviour to adapt to the changes in terrain. It is intended for adjustments made during the ride. The compression adjuster controls the compression lifting speed or the rate at which the fork deflects slow impacts. The compression adjuster affects the absorption of bumps and its efficiency when weight shifts or during transitions, cornering and uniform impacts caused by bumps, and when braking. When optimally adjusted, the fork counteracts deflection, stays higher in its deflection range and helps to maintain speed while riding on hilly parts of terrain. The fork deflects quickly and unhindered when the bike hits a bump and absorbs the bump. Traction is retained (blue line).

![Figure 12: Optimum performance on hilly terrain](image)
Steel suspension fork structure

2. Air valve cap
3. Fork steerer
4. Sag setting wheel
5. Rebound adjuster
6. Stanchion
3.3.3.3 Rear frame damper

A rear frame damper is primarily fitted to mountain bikes and helps to protect the pedelec and rider against impacts and vibrations caused by uneven ground. A rear frame damper deflects when a steel spring, air suspension, or both suspension types act on it.

Negative deflection (sag)

The sag is the percentage of total spring deflection that is compressed by the rider’s body weight, including equipment (such as a backpack), their seating position and frame geometry. Sag is not caused by riding.

The rear frame damper rebounds at a controlled speed if it is optimally adjusted. The rear wheel does not bounce off rough surfaces or the ground; it stays in contact with the ground instead (blue line).

The saddle is raised slightly if the bump is compensated and gently sinks downwards when the suspension deflects as soon as the wheel touches the ground after the bump. The rear frame damper rebounds in a controlled way, so that the rider remains sitting in a horizontal position when the next bump is absorbed. The suspension motion is predictable and controlled. The rider is not thrown upwards or forwards (green line).

Figure 15: Optimum rear frame damper ride performance

When optimally adjusted, the rear frame damper counteracts deflection, stays higher in its deflection range and helps to maintain speed when riding on hilly parts of terrain.

Figure 16: Optimum rear frame damper ride performance on hilly terrain
When optimally adjusted, the rear frame damper deflects quickly and unhindered when the bike hits bumps and absorbs a bump. Traction is retained (blue line).

The saddle rises slightly when absorbing a bump (green line).

Figure 17: Optimum rear frame damper ride performance over bumps
3.3.3.4 Suntour rear frame damper

The rear frame damper features air suspension, a compression damper and a rebound damper.

![Diagram of Suntour rear frame damper]

3. Air valve
4. Lockout lever
5. Total damper length
6. Negative deflection in the rear frame damper
7. Damper unit
8. O-ring
Rebound damping for rear frame damper
Only applies to pedelecs with this equipment

The rear frame damper rebounds at a controlled speed if it is optimally adjusted. The rear wheel does not bounce off rough surfaces or the ground; it stays in contact with the ground instead (blue line). The saddle is raised slightly if the bump is compensated and gently sinks downwards when the suspension deflects as soon as the wheel touches the ground after the bump. The rear frame damper rebounds in a controlled way, so that the rider remains sitting in a horizontal position when the next bump is absorbed. The suspension motion is predictable and controlled. The rider is not thrown upwards or forwards (green line). The rebound adjuster setting depends on the air pressure setting. A higher sag requires lower rebound damping.

Figure 19: Optimum rear frame damper riding performance

Rear frame damper compression adjuster
Only applies to pedelecs with this equipment

The compression adjuster controls the compression lifting speed or the rate at which the rear frame damper deflects in response to slow impacts. The compression adjuster affects the absorption of bumps and its efficiency when weight shifts or during transitions, cornering and uniform impacts caused by bumps, and when braking.

When optimally adjusted, the rear frame damper counteracts deflection, stays higher in its deflection range and helps to maintain speed when riding on hilly parts of terrain.

Figure 20: Optimum rear frame damper ride performance on hilly terrain
3.3.4 Wheel

The wheel comprises the wheel itself, an inner tube with a valve and a tyre.

3.3.4.1 Tyres

The tyre forms the outer section of the wheel. Tyres differ in their tread, depending on their intended use.

Tread

The tread has little influence on riding characteristics on a smooth road. In this case, the grip between the road and tyre is mainly due to the rolling friction between the rubber and the road surface.

Unlike cars, a pedelec will not aquaplane. The tread contact is much smaller and the contact pressure much higher. Theoretically, aquaplaning will not occur until speeds of 200 km/h are reached.

However, the tread is highly important on terrain. In this case, the tread creates an interlock with the ground. This is the only way possible to transmit the driving, braking and steering forces. The tread can also help improve control on dirty road surfaces.

If a tyre with a deep tread is used on asphalt, this may make an unpleasant noise when the brakes are used. In such a case, the specialist dealer needs to replace the tyre with a new one with a shallow tread.

Tyre pressure

The permitted pressure range is indicated on the side of the tyre. It is indicated in psi or bars.

The tyre is only able to support the pedelec if there is adequate tyre pressure. The tyre pressure must be adjusted to the rider and then checked on a regular basis.

Tyre size

The tyre size pressure range is indicated on the side of the tyre.

3.3.4.2 Rim

The rim is the metal profile on a wheel which holds the tyre, tube and rim band together. The rim is joined to the hub with spokes.

In rim brakes, the outer surface of the rim is used to brake.

3.3.4.3 Valve

Each wheel has a valve. Air is pumped into the tyre via the valve. There is a valve cap on each valve. The screw-on valve cap keeps out dust and dirt.
The pedelec has either:
- a conventional valve
- a Presta valve or
- a Schrader valve.

Dunlop valve
The Dunlop valve, also known as a conventional valve, is the valve in most widespread use. The valve insert can be replaced easily and air can be let out very quickly.

Presta valve
The Presta valve, also known as the French valve (FV) or Sclaverand valve, is the narrowest variant of all valves. The Presta valve requires a smaller hole in the rim, which is why it is especially suitable for the narrow rims on racing bikes. It is about 4 to 5 g lighter than a Dunlop or Schrader valve.

Schrader valve
The Schrader valve can be pumped at filling stations. Older and easy bicycle pumps are unsuitable for filling tyres via a Schrader valve.

3.3.4.4 Spoke
A spoke is a rod that connects the hub to the rim. The bent end of the spoke which is hooked into the hub is called the spoke head. A thread between 10 mm and 15 mm is attached to the other end of the spoke.

3.3.4.5 Spoke nipples
Spoke nipples are screw elements with an internal thread which fits onto the spoke thread. Fitted spokes are tensioned by tightening the spoke nipples. This straightens the wheel uniformly.

3.3.4.6 Hub
The hub is located in the centre of the wheel. The hub is connected to the rim and tyre with the spokes. An axle runs through the hub, connecting the hub with the fork at the front and with the frame at the rear.

The hub’s main task is to transfer the pedelec’s force of weight to the tyres. Special hubs on the rear wheel perform additional functions. There is a distinction between five types of hub:
- Hubs without additional features
- Brake hub, see Back-pedal brake
- Gear hub, also known as a hub gear
- Generator hub, see Hub dynamo
- Motor hub.
3.3.5 Braking system

A pedelec's brake system is primarily operated using the brake lever on the handlebars.

- If the left brake handle is pulled, the brake on the front wheel is applied.
- If the right brake handle is pulled, the brake on the rear wheel is applied.

The brakes are used as an emergency stop system and bring the bicycle to a halt quickly and safely in the event of an emergency.

The brake is applied using the brake lever either

- with the brake lever and shift cable (mechanical brake) or
- with the brake lever and hydraulic brake cable (hydraulic brake).

3.3.5.1 Mechanical brake

The brake lever is connected with the brake via a wire inside the shift cable (also known as a Bowden cable).

3.3.5.2 Hydraulic brake

The brake fluid is in a closed hose system. If the brake lever is pulled, the brake fluid transfers pressure to the brake on the wheel.

![Figure 27: Components in a brake cable](image)

- 1 Brake cable
- 2 Cable clip
- 3 Union nut
- 4 Cover cap
- 5 Knob
- 6 Insert pin

Figure 26: Bowden cable structure

Figure 27: Components in a brake cable
3.3.5.3 Disc brake

On a pedelec with a disc brake, the brake disc is screwed permanently to the wheel hub.

You increase brake pressure by pulling the brake lever. The brake fluid is used to transfer pressure through the brake cables to the cylinders in the brake calliper. The braking force is boosted by a speed reduction and applied to the brake linings. These apply the brake disc mechanically. If the brake lever is pushed, the brake linings are pressed against the brake disc and the wheel movement is decelerated until it comes to a stop.

Figure 28: Brake system with disc brake – example

1  Brake disc
2  Brake calliper with brake linings
3  Handlebars with brake lever
4  Front wheel brake disc
5  Rear wheel brake disc
3.3.6 Seat post

Seat posts are not designed to fasten the saddle but also to adjust exactly to the optimum sitting position. The seat post can:

- adjust the seat height in the seat tube
- adjust the saddle horizontally with a clamping mechanism and
- adjust the saddle angle by swivelling the entire saddle clamping mechanism.

Retractable seat posts feature a remote control on the handlebars, which can be used to lower the seat post – at a traffic light, for example – and raise it again.

3.3.6.1 Patent seat post

![Figure 29: Example of ergotec patent seat post with either one or two seat clamping screws](image)

Patent seat posts have a rigid link between the saddle and the post. Patent seat posts which are angled more markedly towards the rear are called offset seat posts. Offset seat posts provide a greater distance between the saddle and the handlebars.

In patent saddle posts, the saddle is attached to the head with one or two saddle clamping screws. It is recommended to lubricate the thread in these screws to ensure sufficient tension when tightening the screw.

Patent saddle posts are fastened into the seat tube with either a quick release or a screwable clamp.

![Figure 30: Example of a quick release](image)

3.3.6.2 Suspension seat post

Spring-loaded seat posts can reduce shock after one-time hard impacts, thus improving ride comfort significantly. However, suspension seat posts are not able to compensate for bumps in the road.

If the seat post is the only suspension element, the entire vehicle is a non-suspended mass. This has an unfavourable effect on loaded touring bikes or pedelecs with child trailers.

Suspension seat posts feature small, heavy-duty slide bearings, guides and articulated joints. If they are not lubricated on a regular basis, the sensitive response behaviour diminishes considerably, causing excessive wear.

The pre-tensioning in non-damped suspension seat posts must be adjusted in such a way that the suspension seat post does not deflect with just body weight. This prevents the suspension seat post from deflecting and bobbing intermittently at higher pedalling frequencies or if the rider pedals irregularly.

The spring stiffness can be set lower with damped suspension seat posts, thus making use of the negative deflection.
3.3.7 Mechanical drive system

The pedelec is driven by muscle power, just like a bicycle.

The force which is applied by pedalling in the direction of travel drives the front chain wheel. The chain or belt transmits the force onto the rear chain wheel and then onto the rear wheel.

The pedelec is equipped with either a chain or belt drive.

3.3.7.1 Chain drive layout

A chain drive is compatible with
• Back-pedal brake,
• Hub gear or
• Derailleur gears

3.3.7.2 Belt drive layout

A belt drive is compatible with
• Back-pedal brake and
• Hub gear

A belt drive is not compatible with derailleur gears.
3.3.8 Electric drive system

The pedelec has an electric drive system in addition to a mechanical one.

Figure 34: Diagram of an electric drive system with electric components

1 Front lamp
2 On-board computer
3.1 Integrated battery and/or
3.2 Frame battery and/or
3.3 Pannier rack battery
4 Rear light
5 Electric gear shift (alternative)
6 Motor
(7) A charger which is designed for the battery (not shown).

3.3.8.1 Motor

As soon as the muscle power required for pedalling passes a certain level, the motor is activated gently and assists the pedalling motion. The motor power always depends on the power used to pedal: Motor assistance is lower when little muscle power is used than when muscle power is used. This happens regardless of the level of assistance.

The motor switches off automatically as soon as the rider no longer pedals, the temperature is outside the permitted range, there is an overload or the shut-off speed of 25 km/h has been reached.

A push assist system can be activated. The speed depends on the selected gear. The motor continues to drive the pedelec as long as the rider presses the push assist button on the handlebars. The speed can be a maximum of 6 km/h in this case. The electric drive system stops when the push assist button is released. The pedelec does not have a separate emergency shut-off button. In the event of an emergency, the motor can be stopped by removing the on-board computer. The mechanical brakes are used as an emergency stop system and bring the bicycle to a halt quickly and safely in the event of an emergency.

3.3.8.2 Rechargeable battery

BOSCH batteries are lithium ion batteries which are developed and manufactured to the latest technical standards. Each battery cell is protected by a steel cup and encased in a plastic battery housing. Applicable safety regulations are met.

• The battery has an interior electronic protection circuit, which is specifically designed for the charger and the pedelec.
• The battery temperature is monitored at all times.
• The battery is protected against deep discharge, overcharging, overheating and short circuits by Electronic Cell Protection (ECP).

In the event of a hazard, a protective circuit switches the battery off automatically. In the event of a hazard, a protective circuit switches the battery off automatically.

The battery has a high energy content when charged. The code of practice for their safe handling is found in Section 2 Safety and Section 6.9 Rechargeable battery in the operating instructions. If the electric drive system is not used for 10 minutes and no button has been pressed on the on-board computer or the control panel, the electric drive system and the battery are automatically switched off to save energy.

The type and duration of operating conditions have a significant effect on the battery life. Just like any other lithium-ion battery, the battery will age naturally if it is not being used. The battery’s service life can be extended if the battery is well maintained and stored at the correct temperature. The charging capacity will decrease with age, even if the battery is maintained properly. If the operating time is severely shortened after charging, this is a sign that battery has reached the end of its useful life.

Battery performance is reduced when the temperature drops since this increases electrical
resistance. You should expect the range to be less than normal at low temperatures in winter. We recommend using thermal protection sleeves when riding longer distances at low temperatures. Each battery has its own lock.

### 3.3.8.3 Charger

Each pedelec is supplied with a charger. The following BOSCH charger may be used:

- the 4 A Charger BPC3400.

Observe the operating instructions in the Section 11.4 Documents.

### 3.3.8.4 Lighting

When the riding light is activated, the front light and rear light are switched on together at the same time.

### 3.3.8.5 Integrated battery

The following battery can be built into the pedelec:

![PowerTube 750](image)

6. Battery level indicator (battery)
7. Socket for charger plug
8. Battery housing
3.3.9 On-board computer

The control panel on the handlebars is the on-board computer. It controls the system and all messages on the display screen using seven buttons.

Figure 37: BOSCH LED Remote control panel

The eBike Flow app can be accessed via Bluetooth®.

The control panel has an internal lithium ion battery. The pedelec battery powers the control panel. If a sufficiently charged battery is inserted into the pedelec and the drive system switched on, the internal battery is charged.

3.3.9.1 Display

Figure 38: BOSCH Kiox300 display

The display shows the main drive system functions and the ride data.

The display switches off automatically if it is removed from its mount.
3.4 Description of controls and screens

Table 13: Overview of levels of assistance

2. ABS indicator (optional)

The ABS indicator lights up on pedelecs with an ABS system when they start up.

The ABS will switch off if the pedelec reaches a speed of 6 km/h.

If there is a fault, the ABS indicator lights up together with the indicator of the selected level of assistance, which will flash orange.

Press the Select button to acknowledge the fault and the flashing indicator for the selected level of assistance will go out. The ABS indicator remains lit to indicate that the ABS system is not in operation.

3. Battery level indicator (control panel)

The battery level indicator (control panel) shows the battery charge level. You can also see the battery charge level on the LEDs on the battery itself.

Each blue bar on the indicator signals 20% capacity and each white bar 10% capacity. The top bar indicates maximum capacity. The two lower indicators will change colour if the capacity is low:

<table>
<thead>
<tr>
<th>Bars</th>
<th>Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 × blue</td>
<td>100...91%</td>
</tr>
<tr>
<td>3 × blue + 1 × white</td>
<td>90...81%</td>
</tr>
<tr>
<td>2 × blue</td>
<td>80...71%</td>
</tr>
<tr>
<td>1 × blue + 1 × white</td>
<td>70...61%</td>
</tr>
<tr>
<td>3 × blue</td>
<td>60...51%</td>
</tr>
<tr>
<td>2 × blue + 1 × white</td>
<td>50...41%</td>
</tr>
<tr>
<td>2 × blue</td>
<td>40...31%</td>
</tr>
<tr>
<td>1 × orange</td>
<td>30...21%</td>
</tr>
<tr>
<td>1 × orange</td>
<td>20...11%</td>
</tr>
<tr>
<td>1 × red</td>
<td>10%...reserve</td>
</tr>
<tr>
<td>1 × red, flashing</td>
<td>Reserve...empty</td>
</tr>
</tbody>
</table>

Table 14: Battery level indicator (control panel)

The uppermost bar will flash if the battery is charging.

3.4.2.1 System message

The control panel indicates whether a critical or less critical error has arisen in the drive system.

The error messages generated by the drive system can be read in the eBike Flow app and by the specialist dealer.

The rider can use a link in the eBike Flow app to display all information on errors and assistance on eliminating errors.

You will find more information and a table containing all system messages in Section 6.2.
3.4.2.2 Creating a user account

The rider needs to register on a PC or their smartphone and create a user account to use all the drive system’s functions.

The user account can be used to change settings, analyse routes and ride data and activate premium functions among other things.

3.4.2.3 Software updates

Software updates are automatically transferred to the on-board computer in the background of the Bosch eBike Flow smartphone app as soon as the app is connected to the on-board computer.

Once an update has been completely transferred, this is displayed three times when the on-board computer is restarted.

Alternatively, the user can check whether an update is pending under SETTINGS <My eBike> <Components>.

3.4.2.4 Activity tracking

User recognition is required on a PC or smartphone to record activities.

The rider needs to agree to location data being saved on the portal or the app to record activities. Only then will all activities be displayed on the portal or app.

Your location will only be logged if the on-board computer is connected to the eBike Connect app.

Activities will be displayed after synchronisation in the app and on the portal.

3.4.2.5 Lock function

When the lock function is used, the on-board computer acts in a similar way to a key for the drive system. Once the lock function is switched on, the e-bike drive unit assistance is deactivated by removing the on-board computer. The rider can continue to use the mechanical drive system.

It can then only be activated using the on-board computer belonging to the pedelec. The lock function is linked to the eBike Connect app user account.

The lock function does not consist of theft detection; it is more a supplement to a mechanical lock. The lock function does not provide mechanical blocking of the pedelec or similar. It only deactivates assistance from the drive unit.

If third parties are to have temporary or permanent access to the pedelec, the lock function must be deactivated in the eBike Connect app.

When activating and deactivating the lock function, the drive system emits audible lock signals. The audible feedback signal is activated by default. The feedback signal can be deactivated under SETTINGS <My eBike>. 
3.4.3 Display

The display is controlled using the control panel.

Figure 41: BOSCH Kiox300 display

The following pages are on the display screen:

- START SCREEN – see section 3.4.8.1
- STATUS SCREEN – see section 3.4.8.3
- SETTINGS, see Section 3.4.8.5

3.4.3.1 START SCREEN

If no other page was selected before the last time display was switched off, the START SCREEN is displayed.

1. Unit of speed

The unit of speed is displayed either in km/h or mph.

2. Selected level of assistance indicator

The higher the selected level of assistance, the more the drive system assists with pedalling. eMTB mode is available for Performance Line CX drives. In eMTB mode, the assistance factor and the torque are dynamically adjusted depending on the pedalling force applied to the pedals.

<table>
<thead>
<tr>

Table 15: Overview of levels of assistance

3. Riding light symbol

The riding light symbol is shown when the riding light is on.

4. Battery level indicator (display screen)

If the on-board computer is removed from its mount, the last battery level message is saved. The battery level indicator (display screen) can be viewed on the STATUS SCREEN and in the status bar.

Figure 42: Overview of start screen

1  Unit of speed
2  Selected level of assistance indicator
3  Riding light symbol
4  Battery level indicator (display screen)
5  Title screen
6  Own power indicator
7  Motor power indicator
8  Speed indicator

Indicators 2 to 4 make up the status bar and are displayed on every page.
5. Title screen
The title screen indicates the page name and the displayed function.

6. Own power indicator
The power that is currently being applied to the pedals is displayed as a semi-circle.

7. Motor power indicator
The motor power used is displayed as a bar. The maximum motor power depends on the selected level of assistance.

8. Speed indicator
The speed is displayed either in km/h or mph.

Table 16: Basic structure of Kiox300 menu and sub-menu
3.4.4 Battery level indicator (battery)

Each battery has its own level indicator:

The five green LEDs on the battery level indicator battery show the charge level when the battery is switched on.

Each LED represents about 20% battery capacity. All five LEDs will light up when the battery is fully charged. If the battery level falls below 5%, all the LEDs on the operating status and battery level indicator will go out.
3.4.5 Gear shift

3.4.5.1 SHIMANO SW-E7000 derailleur gears

Only applies to vehicles with this equipment

The gear shift unit is on the left of the handlebars. The gear shift unit features 2 buttons.

Figure 44: SHIMANO SW-E7000 gear shift

1 Up button (gear shift)
2 Down button (gear shift)
3.4.6 Hand brake

There is a hand brake on the left and right of the handlebars.

Figure 45: Front wheel (2) and rear (1) brake levers – Shimano brake used as an example

- The left-hand brake controls the front wheel brake.
- The right-hand brake controls the rear wheel brake.

Table 26: Type number, model and pedelec type

* Vehicle weight without battery
# Not yet available when the instructions were produced

4.2 Designated handles, lifting points

The box does not have any handles.
4.3 Transportation

**Crash caused by unintentional activation**
There is a risk of injury if the drive system is activated unintentionally.

► Remove the battery.

4.3.1 Using the transport securing system
Applicable for pedelec disc brakes only

**CAUTION**

**Oil leak if no transport securing device**
The brake securing device prevents the brakes from being applied accidentally during transportation or shipment. This could cause irreparable damage to the brake system or an oil leak, which will harm the environment.

► Never push the brake lever when the wheel has been dismounted.

► Always use the transport securing system when transporting or shipping.

► Insert the transport securing devices between the brake linings.

✔️ Transport securing device is squeezed between the two linings and prevents undesired sustained braking which can cause brake fluid to leak out.

Figure 46: Fastening the transport securing device

4.3.2 Transporting the pedelec

Bicycle rack systems which use the handlebars or frame to hold the pedelec in an upside-down position exert inadmissible forces on its components during transportation. This can cause the supporting parts to break.

► Never use bicycle rack systems which use the pedelec’s handlebars or frame to hold it in an upside-down position. The specialist dealer will give a consultation on correct selection and safe use of a rack system.

► Take into account the weight of the ready-to-use pedelec when transporting it.

► Protect the electrical components and connections on the pedelec from the weather conditions with suitable protective covers.

► Transport the battery in a dry, clean position where it is protected from direct sunlight.

4.3.3 Shipping a pedelec

► When shipping the pedelec, we recommend that you have the specialist dealer place it in proper packaging.

4.3.4 Transporting the battery

*Batteries* are subject to hazardous goods regulations. Undamaged batteries may be transported by private persons in road traffic.

Commercial transport requires compliance with regulations concerning packaging, labelling and the transportation of hazardous goods. Open contacts must be covered and the battery securely packaged.

4.3.5 Shipping the battery

The battery is considered a hazardous good and only trained persons may pack and ship a battery. Contact specialist dealer.
4.4 Storing

- Store the pedelec, on-board computer, battery and charger in a clean, dry place where they are protected from sunlight.
- Do not store outdoors to ensure a long service life.

**Storage temperature**

<table>
<thead>
<tr>
<th>Temperature</th>
<th>+10… +40 °C</th>
</tr>
</thead>
</table>

**Optimum pedelec storage temperature**

| Temperature         | +10… +20 °C |

Table 27: Storage temperature for batteries and the pedelec

- Temperatures under -5 °C or over +40 °C must generally be avoided.
- Storage at about 10 °C to 20 °C is beneficial to a long battery life.
- Store pedelec, on-board computer, battery and charger separately.
- Store batteries in rooms with smoke detectors and not near flammable or easily flammable substances and not near sources of heat.

4.4.1 Break in operation

**Notice**

The battery discharges when not in use. This can cause irreparable damage to the battery.

- The battery must be recharged every 6 months.
- The battery may become damaged if it is connected permanently to the charger.
- Never connect the battery to the charger permanently.

If the battery is stored for a longer period of time when empty, it can become damaged despite low self-discharge and the storage capacity can be greatly reduced.

- Store battery with at least 30% charge.

- If the pedelec is removed from service for longer than four weeks, you need to prepare it for a break in operation.

4.4.1.1 Preparing a break in operation

- Remove the rechargeable battery from the pedelec.
- Charge battery between 30% and 60% so that 2 to 3 LEDs light up on the battery level indicator.
- The pedelec needs to be cleaned with a damp cloth and preserved with wax spray. Never wax the friction surfaces of the brake.
- Before longer periods without use, it is recommended to have the specialist dealer carry out maintenance and basic cleaning and apply preservative agent.

4.4.1.2 Carrying out a break in operation

1. Store the pedelec, battery and charger in a dry, clean environment. We recommend storing them in uninhabited rooms with smoke alarms. Dry locations with an ambient temperature between 10 °C and 20 °C are ideal.

2. Check the battery level after 6 months. If only one LED on the battery level indicator lights up, recharge the battery to between 30% and 60%.

**Table 27: Storage temperature for batteries and the pedelec**

- Temperatures under -5 °C or over +40 °C must generally be avoided.
- Storage at about 10 °C to 20 °C is beneficial to a long battery life.
- Store pedelec, on-board computer, battery and charger separately.
- Store batteries in rooms with smoke detectors and not near flammable or easily flammable substances and not near sources of heat.

**Notice**

The battery discharges when not in use. This can cause irreparable damage to the battery.

- The battery must be recharged every 6 months.
- The battery may become damaged if it is connected permanently to the charger.
- Never connect the battery to the charger permanently.

If the battery is stored for a longer period of time when empty, it can become damaged despite low self-discharge and the storage capacity can be greatly reduced.

- Store battery with at least 30% charge.

- Remove the on-board computer from its mount if the pedelec is not going to be used for up to four weeks. Store the on-board computer away safely in a dry environment at room temperature.
5 Assembly

Risk of eye injury
Problems may arise if components are set incorrectly. They may cause serious injuries to the face.
> Always wear safety glasses to protect eyes when assembling pedelecs.

Crash and crushing hazard caused by unintentional activation
There is a risk of injury if the drive system is activated unintentionally.
> Remove the battery.

✓ Assemble the pedelec in a clean, dry environment.
✓ The work environment temperature should be between 15 °C and 25 °C.
✓ The fitting stand used must be approved for a maximum weight of least 30 kg.

5.1 Unpacking
The packaging material consists mainly of cardboard and plastic film.
> Dispose of the packaging in accordance with the regulatory requirements (see Section 10).
✓ Pedelecs are fully assembled in the factory for test purposes and then dismantled for transportation. The pedelec is 95% to 98% pre-assembled.

Scope of delivery

![Table: Scope of delivery]

5.2 Required tools
The following tools are required to assemble the pedelec:

![Table: Tools required for assembly]

WARNING

Risk of eye injury
Problems may arise if components are set incorrectly. They may cause serious injuries to the face.
> Always wear safety glasses to protect eyes when assembling pedelecs.

CAUTION

Crash and crushing hazard caused by unintentional activation
There is a risk of injury if the drive system is activated unintentionally.
> Remove the battery.

Scope of delivery

- 1 pre-assembled pedelec
- 1 front wheel
- 2 pedals
- 2 quick releases (optional)
- 1 charger
- 1 set of operating instructions on CD.
- 1 battery (supplied separately from the pedelec)

5.2 Required tools
The following tools are required to assemble the pedelec:

- Knife
- Ring spanners 8 mm, 9 mm, 10 mm, 13 mm, 14 mm and 15 mm
- Torque wrench Working range 5–40 Nm
- by Schulz handlebars:
  TORX® bits: 4 mm, 5 mm and 6 mm
  If not:
  Hexagon bits: 4 mm, 5 mm and 6 mm
- Hexagon socket spanner
  2 mm, 2.5 mm, 3 mm, 4 mm, 5 mm, 6 mm and 8 mm
- Spline nut socket T25
- Cross-recess screwdriver
- Slotted-head screwdriver

Table 28: Tools required for assembly
5.3 Commissioning

Only trained specialist staff may perform initial commissioning since initial commissioning of the pedelec requires special tools and specialist knowledge.

Experience has shown that a pedelec which has not yet been sold is automatically handed to customers as soon as it appears ready to ride.

► It makes sense to prepare each pedelec so that it is fully ready for use immediately after being assembled.

► The assembly report (see Section 11.2) describes all safety-relevant inspections, tests and maintenance tasks.

► All assembly work must be completed to ensure the pedelec is ready to ride.

► Complete an assembly report to document quality assurance (see Section 11.1).

5.3.1 Checking the battery

The battery must be checked before it is charged for the first time.

► Press the On-Off button (battery).

► If none of the LEDs on the battery level indicator light up, the battery may be damaged.

► The battery may be fully charged if at least one, but not all, of the LEDs on the battery level indicator is lit up.
5.3.1.1 Securing the PowerTube BS3 battery mount

Only applies to pedelecs with this equipment

The BOSCH PowerTube BS3 battery mount must be secured by clamping a clip on its rear.

1 Use a TORX® T25 wrench to undo the screws in the battery mount.

2 Remove battery mount and turn over.

3 Clamp the clip (VLD-I-1222) onto the battery mount on the rear.

4 Turn battery mount over and place on the aluminium brace in the frame.

5 Use a TORX® T25 wrench to fasten the screws into the battery mount.
5.3.2 Preparing the wheel

There is an arrow on the sides of the tyres with the inscription ROTATION to show the direction of rotation. The inscription says DRIVE on older tyres. The rotation direction arrow indicates the recommended direction of rotation. On road tyres, the direction of rotation is mainly for optical reasons.

Figure 50: Rotation direction arrow

The direction of rotation is much more important on off-road terrain because the tread creates an interlock with the ground. While the rear wheel needs to transmit the drive forces, the front wheel is responsible for transmitting braking and steering forces. Drive and braking forces have different directions of action. This is why some tyres are mounted on the front and rear wheels in opposite directions. On these tyres, there are two rotation direction arrows:

- The FRONT rotation direction arrow indicates the recommended direction of rotation for the front wheel.
- The REAR rotation direction arrow indicates the recommended direction of rotation for the rear wheel.

Figure 51: Rotation direction arrow on MTB tyres

- The rotation direction arrow must point in the direction of travel when the wheel is placed in the fork.
- There are also non-directional tyre profiles with no rotation direction arrow.
5.3.3 Installing the wheel in the SUNTOUR fork

Only applies to Suntour forks with this equipment

5.3.3.1 Screw-on axle (12AH2 and 15AH2)

Only applies to Suntour forks with this equipment

✓ Before installing the wheel, ensure that the O-ring is in the right position on the thread piece.

1 Insert the front wheel into the fork ends.

2 Insert the axle into the hub on the drive side.

3 Use a 6 mm hex key to tighten the axle using between 8 and 10 Nm. The axle thread must be visible.

4 Insert the securing screw on the non-drive side.

5 Tighten the securing screw with a 5 mm hex key using between 5 and 6 Nm.

✓ The wheel is now fitted.
5.3.3.2 20 mm cross axle

Only applies to Suntour forks with this equipment.

1 Insert the cross axle into the hub on the drive side.

![Figure 56: Inserting the cross axle in the direction of the arrow](image)

2 Tighten the cross axle with the red handle.

![Figure 57: Tighten the axle in the direction of the arrow](image)

3 Push red lever into the cross axle.

![Figure 58: Pushing the red lever in the direction of the arrow](image)

4 Closing the quick release lever.

![Figure 59: Pressing the quick release lever in the direction of the arrow](image)

- The cross axle is secured.

---

**CAUTION**

Crash caused by loose quick release axle

A faulty or incorrectly installed cross axle may become caught in the brake disc and block the wheel. This will cause a crash.

- Never fit a defective cross axle.

Crash caused by faulty or incorrectly installed cross axle

The brake disc becomes very hot during operation. Parts of the cross axle may become damaged as a result. The cross axle becomes loose. This will cause a crash with injuries.

- The cross axle and the brake disc must be opposite one another.

Crash caused by incorrectly set cross axle

Insufficient clamping force will result in unfavourable transmission of force. The suspension fork or the quick release axle may break. This will cause a crash with injuries.

- Never fasten the cross axle with a tool (e.g. hammer or pliers).
5 Check the position and clamping force of the quick release lever. The quick release lever must be flush with the shock absorber.

![Figure 60: Perfect position for the clamping lever](image)

6 Use 4 mm hexagon socket spanner to adjust the clamping lever clamping force if required.

![Figure 61: Adjusting the quick release clamping force](image)

7 Check the quick release lever position and clamping force.

⇒ The wheel is now fitted.
5.3.3.3 Q-LOC quick release

Only applies to Suntour forks with this equipment

**CAUTION**

Crash caused by unfastened quick release

A faulty or incorrectly installed quick release may become caught in the brake disc and block the wheel. This will cause a crash.

- Never fit a defective quick release.

Crash caused by faulty or incorrectly installed quick release

The brake disc becomes very hot during operation. Parts of the quick release may become damaged as a result. The quick release comes loose. This will cause a crash with injuries.

- The front wheel quick release lever and the brake disc must be situated on opposite sides.

Crash caused by incorrectly set clamping force

Excessively high clamping force will damage the quick release and cause it to lose its function.

- Never fasten a quick release using a tool (e.g. hammer or pliers).
- Only use the clamping lever with the specified set clamping force.

✔ Before installing, ensure that the quick release flange is extended. Open the lever fully.

1. Push in the quick release until you can hear a click. Make sure that the flange is extended.

![Figure 63: Inserting the quick release in the direction of the arrow](image1)

2. Adjust tensioning with half-open clamping lever until the flange reaches the fork end.

![Figure 64: Adjusting the clamping](image2)

3. Fully close the quick release. Check that it is firmly in place and adjust it on the flange if necessary.

![Figure 65: Closing the quick release](image3)

✔ The wheel is now fitted.
5.3.4 Fitting the pedals

The pedals have two different threads to ensure they don’t come loose while the rider is pedalling.

- The pedal on the left facing the direction of travel has a left-hand thread and is marked L.
- The pedal on the right facing the direction of travel has a right-hand thread and is marked R.

The mark is either on the top end, the axle or the pedal body.

1 Coat threads in both pedals with waterproof grease.

2 Turn the pedal marked L anti-clockwise by hand into the crank arm on the left as seen when facing the direction of travel.

3 Turn the pedal marked R anti-clockwise by hand into the crank arm on the right as seen when facing the direction of travel.

4 Use a 15 mm spanner to fasten the left-hand pedal thread in an anti-clockwise direction and the right-hand pedal in a clockwise direction with a torque between 33 Nm and 35 Nm.
5.3.5 Preparing the LIMOTEC seat post

Only applies to pedelecs with this equipment

1 Use the seat height formula to calculate the optimum seat post height for the length of rider's leg:
   Seat height \( (SH) \) = inner leg length \( (l) \) \times 0.9

2 Lower the seat post further into the seat tube

3 The seat post Bowden cable must be tightened in the frame up to the remote control to the same length as the seat post was lowered.

4 Trim the seat post Bowden cable on the handlebars if necessary.
5.3.6 Checking the stem and handlebars

5.3.6.1 Checking the connections

1 Stand in front of the pedelec. Clamp the front wheel between your legs. Grasp the handlebar grips.
2 Try to twist the handlebars against the direction of the front wheel.
   ➤ The stem must not move or twist.
3 If the stem can be twisted, check fastening.
   ➤ If the stem cannot be fastened, contact your specialist dealer.

5.3.6.2 Checking stem is firmly in position

1 Press full body weight on the handlebars.
   ➤ The handlebars must not move downwards in the fork.

Stem with clamping lever version I

2 If the handlebars should move, increase the lever tension in the clamping lever.
3 Turn knurled nut in a clockwise direction with the clamping lever open.
4 Close clamping lever and check stem is firmly in position again.
5 If the handlebars cannot be fastened, contact your specialist dealer.

Stem with clamping lever version II and stem with screw

➤ If the handlebars cannot be fastened, contact your specialist dealer.

5.3.6.3 Checking the headset backlash

1 Place the fingers of one hand on the upper headset cup. Pull the front wheel brake with the other hand and try to push the pedelec backwards and forwards. Keep in mind that there may be noticeable backlash due to worn-out bearing bushes or brake lining backlash in suspension forks and disc brakes.
   ➤ The headset cup halves must not move towards one another.
2 Set bearing clearance as per the stem repair manual as quickly as possible as otherwise the bearing will become damaged. Contact specialist dealer.

5.4 Pedelec sale

➤ Complete Pedelec pass on the operating instructions envelope.
➤ Note down the manufacturer and the number of the battery key.
➤ Adjust the pedelec to the rider; see Section 6.5.
➤ Adjust the stand and shifter.
➤ Brief operator or rider on all the pedelec's functions (see Section 6.3).
6  Operation

6.1  Risks and hazards

WARNING

Injuries and fatalities caused by blind spots

Other road users, trucks, cars and pedestrians often underestimate the speed of pedelecs. Likewise, other road users frequently do not see pedelecs. This may cause a crash with serious injuries or even death.

▶ Wear a helmet. The helmet must have a reflective strip or a light in a clearly visible colour.

▶ Clothing should be retroreflective or as light as possible. Fluorescent materials are also suitable. High-visibility jackets and straps on your upper body ensure even greater safety.

▶ Always take a defensive approach to riding.

▶ Avoid the blind spots of vehicles turning off the road. Reduce speed as a precaution when other road users turn right.

WARNING

Injuries and death caused by distraction

A lack of concentration while riding increases the risk of an accident. This may cause a crash with serious injuries.

▶ Never allow yourself to be distracted by the on-board computer or your mobile phone.

▶ Stop the pedelec if you want to make inputs on the on-board computer other than change the level of assistance. Only enter data when stationary.

CAUTION

Crash caused by loose clothing

Shoe laces, scarves and other loose items may become entangled in the spokes on the wheels and on the chain drive. This may cause a crash with injuries.

▶ Wear sturdy footwear and close-fitting clothing.

Crash caused by difficult-to-spot damage

If the pedelec topples over or you have a fall or an accident, there may be difficult-to-spot damage to components such as the brake system, quick releases or frame. This may cause a crash with injuries.

▶ Take pedelec out of service. Contact specialist dealer.
Crash caused by material fatigue

Intensive use can cause material fatigue. A component may suddenly fail in case of material fatigue. This may cause a crash with injuries.

► Remove the pedelec from service immediately if there are any signs of material fatigue. Have your specialist dealer inspect the component.

► Arrange the mandatory maintenance appointments with your specialist dealer on a regular basis. During maintenance, the specialist dealer will inspect the pedelec for any signs of material fatigue on the frame, fork, suspension element mountings (if there are any) and components made of composite materials.

Carbon becomes brittle when exposed to heat radiation such as heating. This can cause the carbon part to break and result in a crash with injuries.

► Never expose carbon parts on the pedelec to strong sources of heat.

Crash caused by poor road conditions

Loose objects, such as branches and twigs, may become caught in the wheels and cause a crash with injuries.

► Be aware of the road conditions.

► Ride slowly and brake in good time.

The tyres may slip on wet roads. In wet conditions you must also expect a longer braking distance. The braking sensation differs from the usual sensation. This can cause loss of control or a crash, which may result in injuries.

► Ride slowly and brake in good time when it is raining.

Crash caused by soiling

Heavy soiling can impair pedelec functions, such as braking. This may cause a crash with injuries.

► Remove coarse soiling before riding.

Notice

Heat or direct sunlight can cause the tyre pressure to increase above the permitted maximum pressure. This can destroy the tyres.

► Never park the pedelec in the sun.

► On hot days, regularly check the tyre pressure and adjust it as necessary.

When riding downhill, high speeds may be reached. The pedelec is only designed to exceed a speed of 25 km/h for short intervals. The tyres in particular can fail if exposed to a continuous load.

► Use the brakes to decelerate the pedelec if you reach speeds greater than 25 km/h.

Moisture penetrating at low temperatures may impair individual functions due to the open structural design.

► Always keep the pedelec dry and free from frost.

► If the pedelec is used at temperatures below 3 °C, the specialist dealer must perform an inspection beforehand and prepared it for winter use.

Off-road riding subjects the joints in the arms to severe strain. Take a break from riding every 30 to 90 minutes, depending on the road surface and your physical fitness.
6.2 Tips for a greater range

The pedelec's range depends on many influencing factors. A single battery charge may only last fewer than 20 kilometres but much more than 100 is also possible. There are a few tips which will generally help you maximize range.

Suspension elements

➤ Only open suspension fork and damper when necessary on terrain or gravel paths. Block suspension fork and damper on tarmacked roads or on hills.

Mileage

The more own physical effort the rider makes, the greater the attainable range is.

➤ Shift down 1 to 2 gears to increase the induced power and pedalling frequency.

Pedalling frequency

➤ Ride using pedalling frequencies of over 50 revolutions per minute. This optimises the electric drive's efficiency.

➤ Avoid pedalling very slowly.

Weight

➤ Minimise the total weight of pedelec and baggage.

Stopping and starting

➤ Ride long distances at a constant speed.

➤ Avoid stopping and starting frequently.

Level of assistance

➤ The higher the selected levels of assistance are, the shorter the range is.

Gear shift

➤ Use a low gear and a low level of assistance on hills and when setting off.

➤ Switch up a gear depending on the speed and terrain.

➤ 50-80 crank rotations are optimal.

➤ Avoid high stress loads on the crank during a gear change.

➤ Switch gear back in good time, e.g. before inclines.

Tyres

➤ Always select the right tyres for the surface type. As a general rule, narrower treads move along more easily than heavier ones. Long studs and large grooves usually have an unfavourable effect on energy consumption.

➤ When riding on asphalt, it is important to always use the maximum permitted tyre pressure.

➤ When riding off-road on gravel tracks or soft woodland or meadow soils, it is important to remember the lower the tyre pressure is, the greater the rolling resistance is and thus the greater electric drive system energy consumption is.

Rechargeable battery

Electrical resistance increases as the temperature drops. Battery performance is reduced. As a result, you should expect the range to be shorter than normal in winter.

➤ Use a thermal protection sleeve on the battery in winter.

The range also depends on the battery's age, charge level and state of repair.

➤ Maintain the battery and replace older batteries where necessary.
6.3 Error message

6.3.1 On-board computer

The control panel indicates whether a critical or less critical error has arisen in the drive system.

The error messages generated by the drive system can be read in the eBike Flow app and by the specialist dealer.

The rider can use a link in the eBike Flow app to display all information on errors and assistance on eliminating errors.

6.3.1.1 Less critical errors

The indicator for the selected level for assistance will flash orange in the event of less critical errors.

- Press selection button.
- The error is acknowledged and the indicator for the selected level of assistance displays the colour for the configured level of assistance permanently.

You can eliminate errors yourself using the following table when necessary. Contact your specialist dealer if the problem persists.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
<th>Method of resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x523005</td>
<td>The sensors do not detect the magnetic field properly.</td>
<td>▶ Check that the magnet wasn't lost while riding.</td>
</tr>
<tr>
<td>0x514001</td>
<td></td>
<td>▶ If a magnet sensor is used, check that the sensor and magnet have been fitted properly. In doing so, ensure that the cable to the sensor is not damaged.</td>
</tr>
<tr>
<td>0x514002</td>
<td></td>
<td>▶ If a rim magnet is used, ensure that there are no magnetic field interference near the drive unit.</td>

<tr>
<td>0x514006</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

6.3.2 Rechargeable battery

The battery is protected against deep discharge, overcharging, overheating and short circuits by Electronic Cell Protection (ECP). In the event of a hazard, a protective circuit switches the battery off automatically. If a fault is detected in the battery, the LEDs flash on the battery level indicator.

<table>
<thead>
<tr>
<th>Description</th>
<th>Method of resolution</th>
</tr>
</thead>
</table>
| If the battery is outside its charging temperature range, three LEDs will flash on the battery level indicator. | 1 Disconnect charger from battery.  
  2 Leave battery to cool down or warm up.  
  3 Contact your specialist dealer if the problem persists. |
| If a fault is detected in the battery, two LEDs flash on the battery level indicator. | ▶ Contact specialist dealer. |
| No LEDs will light up if there is no power.     | 1 Check all plug connections.  
  2 Check contacts on the battery for dirt. Clean the contacts carefully if needed.  
  3 Contact your specialist dealer if the problem persists. |

Table 29: List of on-board computer error messages

6.3.1.2 Critical errors

The indicator for the selected level of assistance and battery level indicator flash red to indicate critical errors.

- Contact specialist dealer.
- Never connect a charger.

Table 30: List of battery error messages
6.4 Instruction and customer service

The supplying specialist dealer will provide customer service. Contact details can be found on the pedelec pass for these operating instructions. The specialist dealer will explain all the pedelec functions to the new owner in person, this being when the specialist dealer hands over the pedelec at the latest. These operating instructions are provided with every pedelec, so that the rider can consult them at a later stage.

The supplying specialist dealer will also perform all maintenance, modifications and repairs in the future.

6.5 Adjusting the pedelec

Crash caused by incorrectly adjusted torques

If a screw is fastened too tightly, it may break. If a screw is not fastened enough, it may loosen. This will cause a crash with injuries.

➤ Always observe the indicated torques on the screw and in the operating instructions.

Only a correctly adjusted pedelec will guarantee the desired ride comfort and health-promoting activity.

All settings must be re-configured if the body weight or maximum baggage weight changes.

6.5.1 Preparing

The following tools are required to adjust the pedelec:

<table>
<thead>
<tr>
<th>Tool</th>
<th>Description</th>
</tr>

*For pedelecs with components only*
6.5.3 Determining the sitting position

The starting point for a comfortable posture is the correct position of the pelvis. If the pelvis is in the wrong position, it can cause different types of pain, e.g. in the shoulder or back.

![The pelvis is in the right position (green) or incorrect position (red)](image)

Figure 69: The pelvis is in the right position (green) or incorrect position (red)

The pelvis is in the right position if the spine forms an S-shape and a natural, easy arch.

The pelvis is positioned incorrectly if it tilts slightly backwards. As a result, the spine becomes curved and can no longer deflect to an optimal extent.

A suitable sitting position must be selected beforehand depending on the pedelec type, physical fitness and desired trip distance or speed.

It is especially advisable to check and optimise the sitting position once more before longer rides.
<table>
<thead>
<tr>
<th>Angle of upper body (black dashed line)</th>
<th>Position on roadster</th>
<th>Position on city bike</th>
<th>Position on trekking bike</th>
<th>Position on sports bike</th>
</tr>
</thead>
<tbody>
<tr>
<td>Upright, almost vertical posture, back at an angle of almost 90°. Handlebars and handles are very close to the upper body.</td>
<td>Slightly inclined upper body, back at an angle of 60°–70°.</td>
<td>Considerably inclined upper body, back at an angle of 30°–60°. Greater distance between handlebars and saddle.</td>
<td>Sharply inclined upper body, back at an angle of 15°–30°. Saddle higher than the handlebars.</td>
<td></td>
</tr>
<tr>
<td>Angle between upper arm &amp; upper body (red line)</td>
<td>Extremely acute angle at around 20°. The upper arms are almost parallel to the upper body. The hands are simply placed loosely on the handlebars.</td>
<td>An angle of 75°–80° is optimum. Many people prefer a smaller angle of up to 60° as it requires less effort to support the shoulders, arms and hands.</td>
<td>An angle of 90° is optimum. The muscular support required in the arms, back and shoulder girdle is reduced at 90°.</td>
<td>Above 90° Shoulders, arms and hands need to provide a great deal of support, the supporting muscles in the back are heavily strained and the load on the bearing surface shifts to the front.</td>
</tr>
<tr>
<td>Saddle-handlebar height difference (blue and green line)</td>
<td>&gt;10 The handlebars are positioned far higher than the saddle.</td>
<td>10…5 The handlebars are positioned higher than the saddle.</td>
<td>5…0 Handlebars and saddle are almost at the same height.</td>
<td>&lt;0 The saddle is positioned far higher than the handlebars.</td>
</tr>
<tr>
<td>Benefits</td>
<td>The spine is intuitively moved into its natural S-shape. The strain on arms and hands is very slight – no effort required to support.</td>
<td>The upright position provides a good overview in traffic. Force can be applied to the pedals when pedalling without using much energy.</td>
<td>Shoulders, neck and hands provide more of the support effort, thus promoting a dynamic, agile riding style. Impact is reduced on the back, spine and buttocks, which is particularly important on longer rides. The whole body can apply force to the pedals effectively.</td>
<td>Optimum power transmission. Aerodynamic: low air resistance.</td>
</tr>
<tr>
<td>Disadvantages</td>
<td>Force is applied relatively inefficiently to the pedals. Weight rests exclusively on the buttocks. The spine slumps after a short time for many people (pelvic straightening).</td>
<td>The arms are often stretched through to the high handlebars – this leads to tense shoulders and painful hands. The spine tends to slump quickly due to the &quot;high position&quot;.</td>
<td>There is greater strain on the hands, neck and shoulders. The muscular system needs to be trained for this higher strain, i.e. riders should practise.</td>
<td>Requires highly trained muscles in back, legs, shoulders, abdomen! Comfortable position only for people who are fit.</td>

Table 32: Overview of sitting positions
6.5.4 Adjusting the saddle

6.5.4.1 Straightening the saddle

- Position saddle in direction of travel. In doing so, align the tip of the saddle with the top tube.

Figure 70: Positioning the saddle in direction of travel

Positioning the saddle with eightpins suspension seat post

Only applies to pedelecs with this equipment

1. Position saddle in direction of travel. In doing so, align the tip of the saddle with the top tube.

2. Use a torque wrench to tighten the seat post axle with 8 Nm.

Figure 71: Tightening the seat post axle

6.5.4.2 Adjusting the saddle height

✓ To adjust the saddle height safely, either:
  • Push the pedelec near to a wall so that the rider can lean on the wall to support themselves or
  • Ask another person to hold the pedelec.

1. Use the seat height formula to roughly set the saddle height:
   
   \[ \text{Seat height (SH)} = \text{inner leg length (l)} \times 0.9 \]

2. Climb onto the bicycle.

3. Place your heel on the pedal and extend your leg, so that the pedal is at the lowest crank rotation point. Your knee should now be fully extended.

Figure 72: Heel method

4. Take a test ride.

   • Riders should sit straight on the saddle at an optimal saddle height.
   • If the pelvis moves to the left and right as you pedal, the saddle is too high.
   • If your knees are painful after a few kilometres, the saddle is too low.

   ✓ Position the seat post according to needs if necessary. Adjust the seat height with the quick release.
5 Open the quick release on the seat post to change the seat height (1). To do so, push the clamping lever away from the seat post (3).

![Figure 73: Opening the seat post quick release](image)

6 Set the seat post to the required height.

**CAUTION**

**Crash caused by an excessively high seat post setting**

A seat post which is set too high will cause the seat post or the frame to break. This will cause a crash with injuries.

- Do not pull the seat post out of the frame beyond the minimum insertion depth marking.

![Figure 74: Detailed view of the seat post – examples of the minimum insertion depth marking](image)

7 To close it, push the seat post clamping lever as far as it will go into the seat post (2).

8 Check the clamping force of the quick releases.

6.5.4.3 Setting the saddle height with the remote control

Use the seat height formula to set the saddle height:

$$\text{Seat height (SH)} = \text{inner leg length (I)} \times 0.9$$

**Notice**

If you are unable to achieve the required saddle height, the seat post must be lowered further into the seat tube. The seat post Bowden cable must be tightened in the frame up to the remote control to the same length as the seat post was lowered. If this is not possible, contact your specialist dealer.

**Lowering the saddle**

1 Sit on the saddle.

2 Press the remote control operating lever.

겠다 The seat post will lower.

3 Release the remote control operating lever when you have reached the desired height.

![Figure 75: Remote control operating lever (1)](image)

**Raising the saddle**

1 Remove any pressure from the saddle.

2 Press the remote control operating lever.

겠다 The seat post will rise.

3 Release the remote control operating lever when you have reached the desired height.
6.5.4.4 Adjusting the saddle position

The saddle can be shifted on the saddle frame. The right horizontal position ensures an optimal leverage position for legs. This prevents knee pain and painful incorrect pelvis positions. If you have displaced the saddle more than 10 mm, you need to adjust the saddle height again since both settings affect one another.

✓ The saddle setting must only be made when the bicycle is stationary.
✓ To set the saddle position, either:
  • Push the pedelec near to a wall so that the rider can lean on the wall to support themselves or
  • Ask another person to hold the pedelec.
✓ Move the saddle within its permitted displacement range only (marked on the saddle stay).

1 Climb onto the pedelec.
2 Place the pedals into the vertical position with your feet.

† Riders are adopting the optimal saddle position if the perpendicular line from the kneecap runs through the pedal axle.
  ▶ If the perpendicular line crosses behind the pedal, bring the saddle further forward.
  ▶ If the perpendicular line crosses in front of the pedal, bring the saddle further back.

Figure 76: Knee cap perpendicular line

3 Unfasten and adjust the designated screw connections, and clamp them with the maximum tightening torque for the saddle clamping screws.

6.5.4.5 Adjusting the saddle tilt

The saddle tilt must be adjusted to the seat height, the saddle and handlebar position, and the saddle shape to ensure an optimum fit. The seating position can be optimised in this way if needed.

The saddle placed in a horizontal position prevents the rider from slipping backwards or forwards. This avoids seat problems. In any other position, the tip of the saddle may press uncomfortably into the crotch area. It is also recommended that the centre of the saddle is exactly straight. This ensures that the rider is seated with their sit bones on the wide rear part of the saddle.

1 Adjust the saddle tilt to horizontal.
2 Position saddle middle so that it is completely straight.

Figure 77: Horizontal saddle tilt with 0° tilt in the centre of the saddle

† Riders sit comfortably on the saddle and do not slip backwards or forwards.

3 If the rider tends to slip forwards or sit on the narrow part of the saddle, adjust the seat position (see Section 6.6.2.3) or tilt the saddle very slightly backwards.

6.5.4.6 Checking saddle stability

† Check saddle stability after adjusting it; see Section 7.5.6.
6.5.5 Handlebars

- Check handlebar width and hand position.
- Choose different handlebars if necessary. Contact specialist dealer.

6.5.5.1 Handlebar width

The handlebar width should be as wide as the rider's shoulders as a minimum. This is measured from mid-point to mid-point on the hand contact surfaces.

The wider the handlebars are, the more control they provide, although wide handlebars require greater supporting force. Wider handlebars are particularly useful to ensure a safer ride for loaded touring bikes.

6.5.5.2 Hand position

The hand is an optimal position on the handlebars when the forearm and hand are in a straight line, i.e. the wrist is not bent. In this way, the nerves are not pinched and do not cause pain.

The narrower the shoulders are, the greater the bend of the handlebars should be (maximum 28°).

Straight handlebars are advisable for sports bikes (e.g. MTB). They support direct steering behaviour, but lead to peaks in pressure and greater muscular strain on the arm and shoulder muscles.

6.5.5.3 Adjusting the handlebars

The handlebars and their position determine the posture that the rider adopts on the pedelec.

1 After selecting the seating position (see Section 6.6.2.1), determine the angle of the upper body and of the upper arm.

2 Pre-tension the back muscles when adjusting the handlebars. The only way to stabilise the spine and protect it from excessive strain is with the back and abdominal muscles pre-tensioned. Passive muscles are not able to perform this important task.

3 Set the required handlebar position by adjusting the stem height and angle (see Section 6.6.6).

4 After adjusting the handlebars, check the saddle height and seat position again. The position of the pelvis on the saddle may have changed when the handlebars were adjusted. This can have considerable impact on the position of the hip joint due to the pelvis tilting and may change the usable leg length on the saddle support by up to 3 cm.

5 Correct the saddle height and sitting posture if necessary.
6.5.6 Stem

6.5.6.1 Adjusting the handlebar height with quick release

Only applies to pedelecs with this equipment

1. Open the stem clamping lever.

![Figure 80: Open (2) and closed (1) stem clamping lever; All Up used as an example](image)

2. Pull out the handlebars to the required height.
   Observe minimum insertion depth.

3. Close the stem clamping lever.

![Figure 81: Pulling the locking lever upwards; All Up used as an example](image)

---

Adjusting the quick release clamping force

**CAUTION**

Crash caused by incorrectly set clamping force

Applying excessive clamping force damages the quick release. Insufficient clamping force will result in unfavourable transmission of force. This can cause components to break. This will cause a crash with injuries.

- Never fasten a quick release using a tool (e.g. hammer or pliers).

If the handlebar clamping lever stops before reaching its end position, unscrew the knurled nut.

- Tighten the knurled nut on the seat post if the seat post clamping lever’s clamping force is not effective enough.

- Contact your specialist dealer if the clamping force cannot be set.

---
6.5.6.2 Setting the quill stem
Only applies to pedelecs with this equipment
In the case of a quill stem, the stem and fork steerer form a permanently interconnected component, which is clamped in the fork steerer. The stem and shaft must be replaced together.

![Figure 82: Adjusting the quill stem height]

1. Undo screw.
2. Pull quill stem out.
3. Tighten screw.

6.5.6.3 Adjusting the Ahead stem
Only applies to pedelecs with this equipment
In the case of an Ahead stem, the stem is placed directly on the fork steerer, which protrudes over the frame.

![Figure 83: Raising the Ahead stem by fitting spacer rings]

The handlebar height is adjusted once during production using spacer rings. The part of the fork steerer protruding is then cut off. The handlebar stem can then no longer be raised.
6.5.6.4 Adjusting the angle-adjustable stem

Only applies to pedelecs with this equipment

Angle-adjustable stems are available in different lengths for quill and Ahead stems.

Figure 84: Different versions of angle-adjustable stems

Adjusting the stem angle (c) changes both the distance from the upper body to the handlebars (b) and the handlebar height (a).

Figure 85: City bike (blue) and trekking bike position (red) by changing the angle
### 6.5.7  Ergonomic handles

In the case of ergonomically shaped handles, the palm rests on the anatomically shaped handle. A greater contact surface means that the pressure is more evenly distributed. Nerves and vessels are no longer squeezed in the carpal tunnel.

![Figure 86: Correct (1) and incorrect (2) position of the handle](image)

1. Undo the handle screw.
2. Turn handle into the right position.
3. Tighten the screw.

#### 6.5.7.1 Checking handlebar stability

► See Section 7.5.5.
6.5.8 Tyres

It is not possible to offer a general recommended tyre pressure for a particular pedelec or tyre. The correct tyre pressure largely depends on the weight load on the tyres, mainly determined by body weight and baggage.

Unlike cars, the weight of the vehicle has only a small impact on the total weight. Moreover, the personal preferences for low rolling resistance or a high degree of suspension comfort vary a great deal. It is important to remember that

- the higher the tyre pressure is, the lower the wear, rolling resistance and the risk of breakdown are.
- The lower the pressure in the tyre is, the greater the comfort and grip that the tyre offers is.

In the case of pedelecs used on the road, the rule is the greater the tyre pressure is, the lower the tyre rolling resistance is. The risk of breakdown is also lower when the pressure is high. A permanently excessively low tyre pressure often leads to premature wear in the tyre. Cracking in the side wall is a typical consequence of very low tyre pressure. Abrasion is also unnecessarily high.

On the other hand, a tyre can absorb road impacts more effectively at a low pressure.

As a general rule, wide tyres are operated at a lower tyre pressure. They provide the option of exploiting the advantages of the lower tyre pressure without the serious disadvantages it causes with regard to wear, rolling resistance and breakdown protection.

✓ Never exceed or go below the minimum and maximum pressure limits indicated on the tyre.

1 Pump the tyre to the recommended tyre pressure.

Figure 88: Much too little tyre pressure
6.5.9 Brake

The brake lever grip distance can be adjusted to ensure that it can be reached more easily. The pressure point can also be adjusted to the rider's preferences.

6.5.9.1 Brake handle position

Having the brake handle in the correct position prevents the rider from stretching their wrist too far. Moreover, the brake can also be operated without any discomfort and without changing the handle position or releasing the handle.

✓ Apply the brake lever with the third finger phalanx to brake gently in bursts.
✓ The setting for the middle finger is used for riders who brake with their middle finger or with two fingers.

1 Position your hand on the handle in such a way that the outer heel of the hand is flush with the end of the handlebar.

2 Extend the index finger (about 15°).

3 Push brake lever outwards until the third finger phalanx sits in the brake lever recessed grip.

6.5.9.2 Brake handle tilt angle

The nerves that pass through the carpal tunnel are connected to the thumb and the index and middle fingers. An excessively steep or excessively flat brake angle will cause the wrist to bend, thus narrowing the carpal tunnel. This can cause numbness and tingling in the thumb and index and middle fingers.

1 Calculate the difference between the height of the handlebars and the saddle height to determine the saddle-handlebar height difference.

![Figure 90: Example of 4 different handlebar heights (A, B, C and D) and the saddle height (E)](image)

</tr>
</tbody>
</table>

Figure 92: Brake lever position
6.5.9.4 Retracting the brake linings

Disc brakes require wearing-in time. The braking force increases over time. The braking force is increased during break-in time. This is also the case when the brake pads or brake discs are replaced.

1. Accelerate pedelec to 25 km/h.
2. Brake pedelec until it comes to a halt.
3. Repeat process 30 to 50 times.

The disc brake is retracted and provides optimal braking power.
6.5.10 Tyres

It is not possible to offer a general recommended tyre pressure for a particular pedelec or tyre. The correct tyre pressure largely depends on the weight load on the tyres, mainly determined by body weight and baggage.

Unlike cars, the weight of the vehicle has only a small impact on the total weight. Moreover, the personal preferences for low rolling resistance or a high degree of suspension comfort vary a great deal. It is important to remember that

- the higher the tyre pressure is, the lower the wear, rolling resistance and the risk of breakdown are.
- The lower the pressure in the tyre is, the greater the comfort and grip that the tyre offers is.

In the case of pedelecs used on the road, the rule is the greater the tyre pressure is, the lower the tyre rolling resistance is. The risk of breakdown is also lower when the pressure is high.

A permanently excessively low tyre pressure often leads to premature wear in the tyre. Cracking in the side wall is a typical consequence of very low tyre pressure. Abrasion is also unnecessarily high.

On the other hand, a tyre can absorb road impacts more effectively at a low pressure.

As a general rule, wide tyres are operated at a lower tyre pressure. They provide the option of exploiting the advantages of the lower tyre pressure without the serious disadvantages it causes with regard to wear, rolling resistance and breakdown protection.

✓ Never exceed or go below the minimum and maximum pressure limits indicated on the tyre.

1 Pump the tyre to the recommended tyre pressure.

Table 36: Order for adjusting the suspension

6.5.12 Fork sag

**CAUTION**

**Crash caused by incorrectly set suspension**

If the suspension is set incorrectly, the fork may become damaged, meaning problems may occur when steering. This will cause a crash with injuries.

- Never ride the bicycle without air in the air suspension fork.
- Never use the pedelec without adjusting the suspension fork to the rider’s weight.

Settings on the chassis change riding performance significantly. The rider needs to get used to the pedelec and break it in to prevent accidents.

The sag depends on the position and rider’s weight and should be between 10% and 30% of the maximum fork deflection, depending on preferences and on how the pedelec is used.

**Greater sag (20%...30%)**

A greater sag increases sensitivity to bumps, thus producing greater suspension motion. A greater sensitivity to bumps ensures more comfortable ride performance and is used on bicycles with a longer deflection.

**Decreased sag (10%...20%)**

A decreased sag reduces sensitivity to bumps, thus producing less suspension motion. A lower sensitivity to bumps ensures a firmer, more efficient ride and is generally used on bicycles with a longer deflection.

The adjustment shown here represents a basic setting. The rider should change the basic setting to suit the surface and their preferences.

It is advisable to make a note of the basic settings. These can then be used as a starting point for subsequent optimised settings and as a safeguard against unintentional changes.
6.5.12.1 Adjusting the Suntour fork steel suspension
Only applies to pedelecs with this equipment

1 You will find the **sag setting wheel (1)** beneath the plastic cover on the crown. Remove the plastic cover.

![Sag setting wheel (1) on the suspension fork crown](image)

**Figure 96: Sag setting wheel (1) on the suspension fork crown**

- **Turn the sag setting wheel** clockwise to increase the spring pre-tensioning.
- **Turn the sag setting wheel** anti-clockwise to decrease the spring pre-tensioning.
- **You will have made the ideal setting when the shock absorber deflects 3 mm when subject to body weight.**

3 Replace the plastic cover on the crown after making the setting.
6.5.12.2 Adjusting the Suntour fork air suspension

Only applies to pedelecs with this equipment

- The air valve is located beneath the air valve cap on the crown. Twist off the air valve cap.

1. Attach a high-pressure damper pump to the air valve.

2. Pump air suspension fork to the required pressure. Observe the levels in the Suntour filling pressure table. Never exceed the recommended maximum tyre pressure.

Figure 97: Screw caps in different designs

</tbody>
</table>

Table 37: Suntour filling pressure table for air forks

3. Detach high-pressure damper pump.

4. Measure the distance between the crown and the dust seal. This distance is total deflection of the fork.

5. Push a cable tie attached temporarily downwards against the dust seal.

6. Put on your normal cycling clothing, including baggage.

7. Sit on the pedelec in your usual riding position and support yourself against an object, such as a wall or tree.

8. Get off the pedelec without allowing it to deflect.

9. Measure distance between the dust seal and the cable tie.

This measurement is the sag. The recommended value is between 15% (hard) and 30% (soft) of the total fork deflection.

10. Increase or reduce air pressure until you have reached the desired sag.

11. If the sag is correct, turn the air valve cap clockwise.

12. If you are unable to achieve the required sag, an internal adjustment may be needed. Contact specialist dealer.
6.5.13 Adjust the rear frame damper sag

Settings on the chassis change ride performance significantly. The rider needs to get used to the pedelec and break it in to prevent accidents.

Greater sag (20%–30%)

A greater sag increases sensitivity to bumps, thus producing greater suspension motion. A greater sensitivity to bumps ensures more comfortable ride performance and is used on pedelecs with a longer deflection.

Decreased sag (10%–20%)

A decreased sag reduces sensitivity to bumps, thus producing less suspension motion. A lower sensitivity to bumps ensures a firmer, more efficient ride performance and is generally used on pedelecs with a shorter deflection.

The adjustment shown here represents a basic setting. The rider should change the basic setting to suit the surface and their preferences.

It is advisable to make a note of the basic settings. These can then be used as a starting point for subsequent optimised settings and as a safeguard against unintentional changes.
6.5.13.1 Adjusting the Suntour rear frame damper

Only applies to pedelecs with this equipment

Every rear frame damper has a specific delivery air pressure ex works. These levels are starting points. These settings can be changed based on riding skills, trail conditions, frame design and personal preferences.

After setting up the rear wheel damper, check the sag to ensure the recommended sag settings are used.

| Recommended air pressure (psi) |
|-------------------------------|-----------------|----------------|----------------|----------------|
|                              | Body weight     | Triair         | EDGE-TT        | EDGE-TT        | RAIDON         |
|                              | Main body       | Air reservoir  | Main body      | Main body      | Main body      |
| Air pressure Factory reset   | 180             | 200            | 110            | 110            | 110            |
| Maximum air pressure         | 300             | 240            | 300            | 300            | 300            |

Table 38: Suntour filling pressure table for the rear frame damper

- The fork sag is adjusted.
- When adjusting the sag, ensure that the compression and rebound adjuster is in an open position, i.e. the lockout lever is in the OPEN position.

1. Remove the valve cap from the air valve.
2. Attach a fork/damper pump to the valve.
3. Pump the damper to the required pressure. Never exceed the recommended maximum air pressure.

Notice

The damper can be permanently damaged if the required air pressure in the rear frame damper is exceeded or not reached.

Do not exceed the maximum air pressure of 300 psi (20 bar).

4. Detach high-pressure damper pump.
5. Measure the distance between the air chamber seal and the end of the rear frame damper. This distance is the total rear frame damper deflection.
6. Use the O-ring or a cable tie on the damper body to gauge the sag correctly.
7. Put on your normal cycling clothing, including baggage.

8. Sit on the pedelec in your usual riding position and support yourself against an object, such as a wall or tree.
9. Push the O-ring or cable tie downwards against the air chamber seal.
10. Get off the pedelec without the suspension fork deflecting.
11. Measure the distance between the air chamber seal and the O-ring. This measurement is the sag. The recommended value is between 25% (hard) and 30% (soft) of the total rear frame damper deflection.

<table>
<thead>
<tr>
<th>Deflection</th>
<th>Sag</th>

<tr>
<td>50–75</td>
<td>20–25</td>
</tr>
</tbody>
</table>

Table 39: Recommended sag for the rear frame damper

12. Increase or reduce the air pressure until you have reached the desired sag.

- If the sag is correct, fasten the valve cap onto the valve.
6.5.14 Fork rebound damping

Only applies to pedelecs with this equipment

Rebound damping in the suspension fork and the rear frame damper determines the speed at which the rear frame damper rebounds after being subjected to load. Rebound damping controls the suspension fork extension and rebound speed, which, in turn, has an impact on traction and control.

Rebound damping can be adjusted to body weight, spring stiffness, deflection, the terrain and the rider’s preferences.

If the air pressure or spring stiffness increases, the extension and rebound speeds also increase.

Rebound damping needs to be increased to achieve an optimal setting if the air pressure or spring stiffness are increased.

The damper rebounds at a controlled speed if the fork is optimally adjusted. The wheel stays in contact with the ground when passing over bumps (blue line).

The fork head, handlebars and body follow terrain (green line) when riding over bumps. The suspension motion is predictable and controlled.

Figure 98: Optimum fork ride performance
6.5.14.1 Adjusting the Suntour fork rebound damping

Only applies to pedelecs with this equipment

The fork sag is adjusted.

1 Turn the **rebound screw** in a clockwise direction to the closed position until it stops.

2 Turn the **rebound screw** slightly in an anti-clockwise direction.

Adjust the rebound damping in such a way that the fork rebounds quickly, but without bottoming out upwards. Bottoming out refers to when the fork rebounds too quickly and stops moving abruptly once it has reached the full rebound distance. You can hear and feel a slight impact when this happens.
6.5.15 Adjusting the rear frame damper rebound damper

Only applies to pedelecs with this equipment

The rear frame damper rebounds at a controlled speed if it is optimally adjusted. The rear wheel does not bounce off rough surfaces or the ground; it stays in contact with the ground instead (blue line).

The saddle is raised slightly if the bump is compensated and gently sinks downwards when the suspension deflects as soon as the wheel touches the ground after the bump. The rear frame damper rebounds in a controlled way, so that the rider remains sitting in a horizontal position when the next bump is absorbed. The suspension motion is predictable and controlled. The rider is not thrown upwards or forwards (green line).

The rebound adjuster setting depends on the air pressure setting. A higher sag requires lower rebound damping.

Adjust the rebound damping in such a way that the rear frame damper rebounds quickly, but without bottoming out upwards. Bottoming out refers to when the rear frame damper rebounds too quickly and stops moving abruptly once it has reached the full rebound distance. You can hear and feel a slight impact when this happens.

Figure 100: Optimum rear frame damper riding performance

The suspension rebound speed affects the wheel's contact with the ground, which, in turn, has an influence on control and efficiency. The damper should rebound fast enough to sustain traction without producing an erratic or bumpy sensation. If rebound damping is too tight, the damper is unable to rebound fast enough before the next impact.
6.5.15.1 Adjusting the Suntour rear frame damper

Only applies to pedelecs with this equipment

![Suntour rebound adjuster wheel (1) on the rear frame damper](image)

Figure 101: Suntour rebound adjuster wheel (1) on the rear frame damper

- ✔ The sag in the rear frame damper is adjusted.
  - ▶ Turn **rebound wheel** towards minus.
  - ✰ The rebound movement is increased.
  - ▶ Turn **rebound wheel** towards plus.
  - ✰ The deflection movement is reduced.
6.5.16 Compression adjuster on rear frame damper

When optimally adjusted, the rear frame damper deflects quickly and unhindered when the bike hits bumps and absorbs a bump. Traction is retained (blue line).

The saddle rises slightly when absorbing a bump (green line).

Compression adjuster set to hard

- Allows the rear frame damper to move higher in the deflection range. This makes it easier to improve efficiency and maintain momentum when pedalling or riding over uniformly hilly terrain and around bends.
- Deflection feels somewhat harder on bumpy terrain.

Compression adjuster set to soft

- Allows the damper to deflect quickly and easily. This makes it easier to maintain speed and momentum when riding over bumpy terrain.
- Deflection feels somewhat less hard on bumpy terrain.

Figure 102: Optimum rear frame damper ride performance over bumps

Threshold

The damping threshold prevents deflection until a medium impact or downward force occurs. Threshold mode increases drive efficiency over level terrain.

The threshold setting can be used to improve pedalling efficiency over flat, hilly, level or slightly rugged terrain. In threshold mode, higher pedelec speeds lead to greater impact force when a pedelec hits a bump, causing the fork to deflect, and the bump is absorbed.

- When the compression adjuster is in the open position, the rear frame damper deflects quickly and unhindered through its entire deflection range.
- When the compression adjuster is in the threshold position, the rear frame damper counteracts deflection until a medium impact or downward force occurs.
- When the compression adjuster is in the blocked position, the rear frame damper counteracts deflection throughout its deflection range until a strong impact or downward force occurs.
6.5.16.1 Adjusting the Suntour compression adjuster

Only applies to pedelecs with this equipment

1 Set the compression adjuster to the middle position.
2 Ride the pedelec over a small obstacle.
   ▶ Turn compression adjuster anti-clockwise.
   ➤ The damping and compression hardness is reduced. The deflection stroke speed is increased.
   ▶ Turn compression adjuster clockwise.
   ➤ The damping and compression hardness is increased. The deflection stroke speed is reduced.
3 The ideal setting for the rebound damper has been achieved when the rebound movement of the rear wheel feels comparable to that of the front wheel.
6.5.17 Lighting

Example 1
If the front light is positioned too high, oncoming traffic will be dazzled. This can cause a serious accident with fatalities.

Example 2
Positioning the front light correctly can ensure that oncoming traffic is not dazzled and no-one is put at risk.

Example 3
If the front light is positioned too low, the space ahead is not illuminated to an optimum extent and the rider's vision is reduced in the dark.

6.5.17.1 Adjusting the lights

1 Position the pedelec so that its front is facing a wall.
2 Mark the height of the front light (1) on the wall with chalk.
3 Mark half the height of the front light (2) on the wall with chalk.
4 Place pedelec 5 m from the wall.

5 Stand the pedelec up straight. Hold the handlebars straight with both hands. Do not use the kickstand.

6 Switch on riding light.

7 Check the position of the light beam.
   - (I) If the upper edge of the light beam is above the front light height mark (1), the light will dazzle. The front light must be positioned lower.
   - (II) If the mid-point of the light beam is on or slightly below the mark showing half the front light (2), the light is optimally positioned.
   - (III) If the light beam is in front of the wall, move front light up.

Figure 106: Light positioned too high (1), correctly (2) and too low (3)
6.5.18 On-board computer

A smartphone with the eBike Flow application is required to use all drive system functions. The pedelec is connected to the app via a Bluetooth® connection.

6.5.18.1 Creating a user account

The rider needs to register online and create a user account first.

Registering on a PC
1 Create the user account on the BOSCH website.
2 Enter all the details required for registration.

Registering on a smartphone

Apple iPhones
1 Download the Bosch eBike Flow smartphone app from the App Store free of charge.

Android devices
1 Download the eBike Flow smartphone app from the Google Play Store free of charge.

6.5.18.2 Connecting the on-board computer with the smartphone

✓ The BOSCH eBike Flow app is downloaded onto the smartphone.
✓ The drive system is switched on.
✓ The pedelec is stationary.
1 Launch app.
2 Select the <My eBike> tab in the app.
3 Select the <Add new eBike device> tab in the app.
4 Press the On-Off button on the pedelec for longer than 3 seconds.
✓ The top bar on the control panel battery level indicator flashes blue.
✓ The on-board computer will switch the Bluetooth® Low Energy connection on and change to pairing mode.
5 Release the On-Off button.
6 Accept the connection prompt in the app.

7 Follow the instructions on the display.
✓ The user data will be synchronised once the pairing process is complete.

6.5.18.3 Update software

Software updates are managed by the Bosch eBike Flow smartphone app.
✓ The on-board computer is now connected to the smartphone.
✓ The drive system is switched on.
✓ The pedelec is stationary.
✓ A new software update is downloaded automatically onto the on-board computer.
✓ The battery level indicator will flash green during updates to show how the update is progressing.
✓ The system is restarted after an update has completed successfully.

6.5.18.4 Activating activity tracking

✓ Your location will only be logged if the on-board computer is connected to the Bosch eBike Flow smartphone app.
1 Agree to activities being collected and stored on the platform or in the app.
✓ All the pedelec’s activities are stored and displayed on the platform and in the app.

6.5.18.5 Setting up the lock function (optional)

The user account can be used to activate the lock function. This will create a digital key on the smartphone, which is required to start the drive system.
Once the lock function is switched on, the pedelec can only be put into use if:

- the configured smartphone is switched on,
- the smartphone is charged sufficiently and
- the smartphone is directly next to the control panel.

If the key is not immediately verified on the smartphone, the battery level indicator and the display of selected support level on the pedelec flash white to indicate a search for the key. If the key is found, the battery level indicator flashes white. The last configured level of assistance is displayed. If the key cannot be found on the smartphone, the pedelec drive system switches off. The indicators on the control panel go off.

As the smartphone is only used as a contactless key to switch on the pedelec, the battery and control panel can still be used on another, unblocked pedelec.

6.5.18.6 Inserting the display

1. Place display (1) on the locking hook (2) on the front edge of display mount (3) facing the direction of travel.

2. Press display rear onto the display mount.

6.5.18.7 Securing the on-board computer (optional)

It is possible to secure the on-board computer so that it cannot be removed. The locking plate does not offer theft detection.

Figure 108: Position of headset screw

1. Insert locking plate (3) into the adapter tray (2) until you hear the locking plate lock into position.

The display mount (1) can now only be removed if the two attachment screws (4) are undone.

6.5.18.8 Removing the on-board computer

The on-board computer can be removed if it is not secured.

Figure 109: Removing the on-board computer

Pull display (1) forwards until the display is lifted from the display mount (2).
6.5.18.9 Adjust on-board computer

Notice

Never use on-board computer, the display or the display mount as a handle. If the on-board computer, display or display mount are used to lift the pedelec, components can become irreparably damaged.

![Figure 110: Overview of BOSCH LED Remote control panel](image)

You can use the select button (4) to perform the following functions:

- Open the QUICK MENU while riding.
- Open the SETTINGS MENU on the STATUS SCREEN while the bicycle is stationary.
- Confirm values and accept information notifications
- Leave a dialogue.

You can use the forward button (7) and back button (8) to access the different user interfaces with information on ride values even when riding. This means both hands remain on the handlebars while you are cycling.

You can use the plus button (9) and the minus button (10) to increase and decrease the level of assistance. You can use the buttons to scroll up and down a list (such as the SETTINGS menu).

Open start screen

Press On-Off button

The START SCREEN is displayed.

Opening the screens

Press the forward button or back button.

A new screen is displayed.

Open Status screen

1 Open the START SCREEN.
2 Press the Back button.

The STATUS SCREEN is displayed.
6.5.18.10 Adjust on-board computer

✓ The pedelec is stationary. You cannot open and adjust the settings while riding.
✓ The display is inserted and shows the start screen.

1 Open STATUS SCREEN.
2 Press the Select button.

The settings menu is displayed.

<table>

Table 41: Basic structure of Kiox300 menu and sub-menu

✓ Use the Plus and Minus buttons to select the required setting.
➢ Press the Select button to confirm.
➢ Use the Back button to return to the previous menu.
➢ Follow the instructions on the on-board computer.

6.5.18.11 Selects the language

1 Open <System> menu item.
2 Open <Language> sub-menu item.
3 Follow the instructions on the on-board computer.

✓ The language has been selected.

6.5.18.12 Adjusting the clock

1 Open <System> menu item.
2 Open <Time> sub-menu item.
3 Follow the instructions on the on-board computer.

✓ The time has been set.

6.5.18.13 Adjusting the time format

1 Open <System> menu item.
2 Open <Time format> sub-menu item.
3 Follow the instructions on the on-board computer.

✓ The Time Format is set.

6.5.18.14 Selecting units

1 Open <System> menu item.
2 Open <Units> sub-menu item.
3 Follow the instructions on the on-board computer.

✓ The unit of speed is displayed in the selected km/h or mph format.

6.5.18.15 Setting the brightness

1 Open <System> menu item.
2 Open <Brightness> sub-menu item.
3 Follow the instructions on the on-board computer.

✓ The brightness has been set.
6.5.18.16 Reset settings

1. Open <System> menu item.
2. Open <Settings reset> sub-menu item.
3. Follow the instructions on the on-board computer.

⚠️ All settings are reset to the factory settings. All user data has been cleared.
We recommend a parking stand into which either the front wheel or rear wheel can be inserted securely for pedelecs which do not have a kickstand. The following accessories are recommended:

</tbody>
</table>

Table 42: Accessories

### 6.6.1 Child seat

#### WARNING

**Crash caused by incorrect child seat**

The pannier rack and down tube are unsuitable for mounting child seats and may break. Such an incorrect position may cause a crash with serious injuries for the rider or child.

- Never attach a child seat to the saddle, handlebars or down tube.

#### CAUTION

**Crash caused by improper handling**

When using child seats, the pedelec’s handling characteristics and stability change considerably. This can cause a loss of control, a crash and injuries.

- You should practice how to use the child seat safely before using the pedelec in public spaces.

**Risk of crushing due to exposed springs**

The child may crush his/her fingers on exposed springs or open mechanical parts of the saddle or the seat post.

- Never install saddles with exposed springs if a child seat is being used.
- Never install seat posts with suspension with open mechanical parts or exposed springs if a child seat is being used.

**Notice**

- Observe the legal regulations on the use of child seats.
- Observe the operating and safety instructions for the child seat system.
- Never exceed the maximum permitted total weight.

The specialist dealer will advise you on choosing a suitable child seat system for the child and the pedelec.

The specialist dealer must install the child seat the first time to ensure that it is safely fitted.

When installing a child seat, the specialist dealer makes sure that the seat and the fastening mechanism for the seat are suitable for the pedelec and that all components are installed and firmly fastened. They will also ensure that shift cables, brake cables, hydraulic lines and electrical cables are adjusted as necessary, the rider has optimum freedom of movement and the pedelec’s maximum permitted total weight is complied with.

The specialist dealer will provide instruction on how to handle the pedelec and the child seat.
6.6.2 Trailer

Crash caused by brake failure

The braking distance may be longer if the trailer is carrying excessive load. The long braking distance can cause a crash or an accident and injuries.

► Never exceed the specified trailer load.

Notice

► The operating and safety instructions for the trailer system must be observed.
► The statutory regulations on the use of bicycle trailers must be observed.
► Only use type-approved coupling systems.

A pedelec which is approved for towing a trailer will bear an appropriate adhesive label. You may only use trailers with a tongue load and weight which do not exceed the permitted values.

Figure 111: Trailer sign

The specialist dealer will advise on choosing a suitable trailer system for the pedelec. The specialist dealer must install the trailer the first time to ensure that it is fitted safely.

6.6.2.1 Approval for trailer with Enviolo hub

Only applies to pedelecs with this equipment

Only compatible bicycle trailers are approved for ENVILO hub gears.

KETTLER

KETTLER QUADRIGA child trailer.

6.6.2.2 Approval for trailer with ROHLOFF hub
Only applies to pedelecs with this equipment

ROHLOFF Speedhub 500/14

As a basic rule, it is permitted to use a trailer in combination with the ROHLOFF SPEEDHUB 500/14.

There must be no component contact with the cover of the ROHLOFF E-14 gear shift unit caused by pressure or tension at any time during assembly or when riding with the trailer under any circumstances.

Collision causing possible damage to the ROHLOFF E-14 gear shift unit can be avoided with suitable washers or special axle adapters (spacers or polygon) from the coupling manufacturer concerned.

Speedhub with A-12

6.6.3 Mobile holder
Only applies to pedelecs with this equipment

A holder for SP Connect mobile case is fitted to the stem.

✓ Observe the operating instructions for the mobile and the SP Connect mobile case.
✓ Use on tarmacked roads only.
✓ Protect mobile from theft.

► To attach: insert the SP Connect mobile case in the holder and turn 90° to the right.
► To release: turn the SP Connect mobile case 90° to the left and remove.

6.6.4 Tubeless and airless tyres

Bicycle riding without tubes reduces the risk of tyre punctures or even avoids them completely.

The specialist dealer will advise on choosing a suitable tyre system for the pedelec.

A specialist dealer must carry out conversion to tubeless or airless tyres for safety reasons.

6.6.5 Suspension fork coil spring

If the desired suspension fork sag cannot be achieved after adjustment, the coil spring assembly must be replaced with a softer or harder spring.

► Fit a softer coil spring assembly group to increase the sag.
► Fit a harder coil spring assembly group to decrease the sag.

6.6.6 Pannier rack

The specialist dealer will advise on choosing a suitable pannier rack.

The specialist dealer must install the pannier rack the first time to ensure that it is safely fitted.

When installing a pannier rack, the specialist dealer makes sure that the fastening mechanism is suitable for the pedelec and that all components are installed and firmly fastened. They will also ensure that shift cables, brake cables, hydraulic lines and electrical cables are adjusted as necessary, the rider has optimum freedom of movement and the pedelec's maximum permitted total weight is not exceeded.

The specialist dealer will provide instruction on how to handle the pedelec and the pannier rack.

6.6.7 Panniers and cargo boxes

► Use a paint protection film when attaching panniers. This will reduce abrasion on paint and wear on components.
### 6.7 Personal protective equipment and accessories for road safety

Seeing and being seen is crucial in road traffic. The following requirements must be met for riding a road-safe vehicle on public roads.

![Figure 112: Road safety](image)

1. The helmet must have a reflective strip or a light in a clearly visible colour.

2. **Cycle clothing** is essential at all times of year. Clothing should be retroreflective or as light as possible. Fluorescent materials are also suitable. High-visibility jackets and straps on your upper body ensure even greater safety. Never wear a skirt. Always wear trousers which reach down to your ankles instead.

3. The **large red reflector** with a “Z” registration mark and the **red rear light** must be clean. The rear light is attached high enough so that cars can see it (minimum height 25 cm). The rear light must work.

4. The two **reflectors on the two non-slip pedals** must be clean.

5. The **yellow spoke reflectors** on both wheels or the **white, fluorescent surface** on both wheels must be clean.

6. The **white front light** must work and must be positioned so that it does not dazzle other road users. If the **white reflector** is not integrated into the front light, it must be clean at all times.

7. **The two separate brakes** on the pedelec must work at all times.

8. **The clear sounding bell** must be fitted and must work.

### 6.8 Before each ride

- Check pedelec before each ride; see section 7.1.

<table>
<thead>
<tr>
<th>Check list before each ride</th>
</tr>
</thead>
<tbody>
<tr>
<td>☐ Check everything is sufficiently clean.</td>
</tr>
<tr>
<td>☐ Check guards.</td>
</tr>
<tr>
<td>☐ Check battery to ensure it is firmly in place.</td>
</tr>
<tr>
<td>☐ Check lights.</td>
</tr>
<tr>
<td>☐ Check brake.</td>
</tr>
<tr>
<td>☐ Check suspension seat post.</td>
</tr>
<tr>
<td>☐ Check pannier rack.</td>
</tr>
<tr>
<td>☐ Check bell.</td>
</tr>
<tr>
<td>☐ Check handles.</td>
</tr>
<tr>
<td>☐ Check rear frame damper.</td>
</tr>
<tr>
<td>☐ Check frame.</td>
</tr>
<tr>
<td>☐ Check wheel concentricity.</td>
</tr>
<tr>
<td>☐ Check quick releases.</td>
</tr>
<tr>
<td>☐ Check mudguards.</td>
</tr>
<tr>
<td>☐ Check USB cover.</td>
</tr>
</tbody>
</table>

- Be alert to any unusual noises, vibrations or odours while riding. Be alert to any unusual operating sensations when braking, pedalling or steering. This indicates material fatigue.

- Take pedelec out of service if there are any deviations from the “Before each ride” check list or any unusual behaviour. Contact your specialist dealer.
6.9 Straightening the quickly adjustable stem

Only applies to pedelecs with this equipment

1 Open stem clamping lever.

Figure 113: Example of All Up with open stem clamping lever

2 Pull handlebars into the highest possible position.

Figure 114: Example of All Up pulled into highest possible position

3 Turn handlebars 90° anti-clockwise so that they are straight.

Figure 115: Example of All Up in straight position

4 Place handlebars at required height

5 Close stem clamping lever.

6.10 Using the pannier rack

Crash caused by loaded pannier rack

The pedelec is handled differently with a loaded pannier rack, in particular when the rider needs to steer and brake. This can lead to a loss of control. This may cause a crash with injuries.

► You should practice how to use a loaded pannier rack safely before using the pedelec in public spaces.

Crushing the fingers in the spring flap

The spring flap on the pannier rack operates with a high clamping force. There is a risk of crushing the fingers.

► Never allow the spring flap to snap shut in an uncontrolled manner.

► Be careful where you position your fingers when closing the spring flap.

Crash caused by unsecured baggage

Loose or unsecured objects on the pannier rack, e.g. belts, may become caught in the rear wheel. This may cause a crash with injuries. Objects which are fastened to the pannier rack may cover the reflectors and the riding light. Other users may not see the pedelec on public roads as a result. This may cause a crash with injuries.

► Secure any objects which are attached to the pannier rack sufficiently.

► Objects fastened to the pannier rack must never cover the reflectors, the front lamp or the rear light.

► Distribute the baggage as evenly as possible between the left- and right-hand side.

► We recommend the use of panniers and baggage baskets.
Operation

6.11 Raising the kickstand

- Use your foot to raise kickstand completely before setting off.

6.12 Using the saddle

- Do not wear studded jeans as these can damage the saddle covering.
- Wear dark clothes for your first few rides as new leather saddles can stain clothing.

6.12.1 Using the leather saddle

Sunlight and UV light damage the colour and can cause the leather to dry out and fade.
- Do not expose the pedelec to the sun for longer periods of time.
- Moisture may cause the leather to detach from material beneath and mould can form.
- If the leather handles get wet, dry handles completely.

6.13 Using the pedals

- The ball of the foot is placed on the pedal when riding and pedalling.

6.14 Using the multifunctional handlebars or bar ends

- Vary handle position to avoid overstraining and tiring the hands.

6.14.1 Using leather handles

Sweat and grease from the skin are two of the greatest enemies of leather. They penetrate the surface of leather and cause it to disintegrate more quickly, meaning the leather can soften and abrade.
- Wear gloves.

Sunlight and UV light damage the colour and can cause the leather to dry out and fade.
- Do not expose the pedelec to the sun for longer periods of time.

Moisture may cause the leather to detach from material beneath and mould can form.
- If the leather handles get wet, dry handles completely.

6.15 Using the bell

1  Press the bell button downwards.
2  Let button spring back.
6.16 Using the battery

✓ Switch off the battery and the drive system before removing or inserting the battery.

6.16.1 Removing the battery

1. Open battery lock with battery key (1).
   - The battery is released and falls into the retainer guard (2).
2. Hold the battery in your hand from below. Use the other hand to push on the retainer guard from above (3).
   - The battery is released and falls into the hand (4).
3. Remove the battery from the frame.
4. Remove the battery key from the battery lock.

6.16.1.1 Inserting the battery

✓ The key is inserted in the lock.
✓ The lock is unlocked.

1. Place the battery into the lower mount with the contacts facing the front (1).
2. Flip the battery upwards so that the battery is held by the retainer guard (2).
3. Keep the lock open with the key.
4. Push the battery upwards (3).
   - The battery can be heard locking into place.
5. Check battery to ensure it is firmly in place on all sides.
6. Lock the battery with the battery key; otherwise, the battery may fall out of the mount when you open the see (4).
7. Remove the battery key from the battery lock.
8. Check the battery to ensure it is firmly in place before each ride.
6.16.2 Charging the battery

The battery can remain on the pedelec or can be removed for charging. Interrupting the charging process does not damage the battery. The battery is fitted with a temperature monitoring system which only allows charging within a temperature range between 0 °C and 40 °C.

✓ The ambient temperature during the charging process lies within the range between 0 °C to 40 °C.

1 Remove the cable connection cover if necessary.

2 Connect the mains plug of the charger to a normal domestic, grounded socket.

Connection data

| Connection data | 230 V, 50 Hz |

Notice

► Check that mains voltage! The power source voltage must match the voltage indicated on the charger nameplate. Chargers labelled 230 V may be operated at 220 V.

3 Connect the charging cable to the battery's charging port.

✓ The charging process starts automatically.

✓ The battery level indicator shows the charge level during charging. When the drive system is switched on, the on-board computer displays the charging process.

Notice

If an error occurs during the charging process, a system message is displayed.

► Remove the charger and battery from operation immediately and follow the instructions.

✓ The charging process is complete when the LEDs on the battery level indicator go out.

4 Once charging is complete, disconnect the battery from the charger.

5 Disconnect the charger from the mains.
6.17 Using pedelec with the electric drive system

6.17.1 Switching on the electric drive system

![CAUTION]

Crash caused by lack of readiness for braking

When it is switched on, the drive system can be activated by the application of force on the pedals. There is a risk of a crash if the drive is activated unintentionally and the brake is not reached.

Never start the electric drive system, or switch it off immediately, if the brake cannot be reached safely and reliably.

- A sufficiently charged battery has been inserted into the pedelec.
- The battery is firmly positioned and locked. The battery key has been removed.
- The speed sensor is connected correctly.

There are two options for switching on the drive system.

On-Off button (control panel)

- Press the **On-Off button (control panel)** briefly (< 3 seconds).

On-Off button (battery)

- Press the **On-Off button (battery)** briefly.

- All LEDs on the control panel will light up briefly.

- The battery level is displayed in colour by the battery level indicator (control panel) and the configured level of assistance by the indicator for the configured level of assistance. The pedelec is ready to ride.

- If the battery capacity is less than 5%, the battery level indicator will remain dark. Only the control panel indicates whether the drive system is switched on or not.

If the drive system is switched on, the drive is activated as soon as the pedals are moved with sufficient force (except if the selected level of assistance is "OFF"). The motor power is based on the level of assistance selected on the control panel.

6.17.2 Switching off the electric drive system

As soon as the rider stops pushing the pedals in normal mode or reaches a speed of 25 km/h, the drive system switches off the assistance system. The assistance system starts up again when you push the pedals and your speed is less than 25 km/h.

The system switches off automatically ten minutes after the last command.

There are two options for switching off the drive system manually.

On-Off button (control panel)

- Press the **On-Off button (control panel)** briefly (< 3 seconds).

On-Off button (battery)

- Press the **On-Off button (battery)**.

- The battery level indicator (control panel) and the indicator for the selected level of assistance go out.

- The pedelec is switched off.

Figure 120: Position of the On-Off button on the BOSCH LED remote
6.18 Using the on-board computer

Notice

Never use on-board computer, the display or the display mount as a handle. If the on-board computer, display or display mount are used to lift the pedelec, components can become irreparably damaged.

Figure 121: Overview of BOSCH LED Remote control panel

Table 43: Overview of control panel

6.18.1 Using the diagnosis port

Notice

A USB connection is not a waterproof plug connection. Any moisture penetrating through the USB port may trigger a short circuit in the control panel.

Never connect an external device.

Regularly check the position of the rubber cover on the USB port and adjust it as necessary.

The diagnosis connection is only designed for maintenance purposes and is not suitable for connecting external devices.

Keep the diagnosis port flap closed at all times to ensure no dust or moisture can penetrate through the port.

6.18.2 Charging the control panel battery

If both the charge level in the battery and the control panel’s internal battery are low, the battery can be charged via the diagnosis port.

Connect the internal battery to a power bank or another suitable power source with a USB type C® cable. (charge voltage: 5 V; charging current: max. 600 mA).
6.18.3 Using the riding light

- The drive system needs to be already switched on to turn on the riding light.

![Figure 122: Position of riding light button (1)](image)

- Press the light button for longer than 1 seconds.
- The front light and rear light are both switched on (riding light symbol is displayed) and switched off (riding light symbol is switched off) at the same time.

6.18.4 Setting the brightness of indicators

The ambient light sensor regulates the indicator brightness.

- The ambient light sensor must be clean and must not be covered.

![Figure 123: Position of increase brightness button (2) and decrease brightness button (1)](image)

- Press the increase brightness button and decrease brightness button to set the brightness of the indicator LEDs.

6.18.5 Using the push assist system

**CAUTION**

Injury from pedals or wheels

The pedals and the drive wheel turn when the push assist system is used. There is a risk of injury if the pedelec wheels are not in contact with the ground when the push assist system is used (e.g. when carrying the pedelec up stairs or when placing it on a bicycle rack).

- Only use the push assist mode when pushing the pedelec.
- You must steer the pedelec securely with both hands when using push assist.
- Allow for enough freedom of movement for the pedals.

The push assist helps move the pedelec. The push assist system speed depends on the selected gear. The lower the selected gear is, the lower the speed in the push assist function is (at full power). The maximum speed is 6 km/h.

- We recommend using first gear for cycling uphill to protect the drive.
1 Press **Push assist button** for longer than 1 seconds. Hold down the button.

- The battery level indicator goes out and a white running light in the direction of travel indicates push assist is ready.

2 One of the following actions must be taken within the next 10 seconds:

- Push pedelec forwards.
- Push pedelec backwards.
- Make a weaving movement with the pedelec.
- The push assist is activated. The continuous white bars change colour to ice blue.
- The motor starts to push.

3 Release **push assist button** on the control panel to switch off push assist.

4 Push the **push assist button** within 10 seconds to reactivate motor assistance.

5 If motor assistance deactivates within 10 seconds, the push assist function switches off automatically.

Push assist will also switch off automatically if

- the rear wheel blocks
- speed bumps cannot be ridden over
- a part of the body is blocking the bicycle crank
- an obstacle turns the crank further
- the rider pedals
- the **plus button** or **On-Off button** is pressed.

The push assist mode of operation is subject to country-specific regulations and may therefore differ from the above description or may be deactivated.

6.18.6 Selecting the level of assistance

The control panel is used to set how much the electric drive should assist the rider when pedalling. You can change the level of assistance at any time while you are cycling.

![Figure 125: Position of plus and minus buttons]

- Press the **plus button** (2) on the control panel to increase the level of assistance.
- Press the **minus button** (1) on the control panel to reduce the level of assistance.
- The motor power used is displayed in colour in the level of assistance indicator.

If the system is switched off, the level of assistance last displayed is saved.
### 6.19 Brake

**WARNING**

**Crash caused by brake failure**

Oil or lubricant on the brake disc in a disc brake or on the rim of a rim brake can cause the brake to fail completely. This may cause a crash with serious injuries.

- Never allow oil or lubricant to come into contact with the brake disc or brake linings or on the rim of a rim brake.
- If the brake linings have come into contact with oil or lubricant, contact specialist dealer to have the components cleaned or replaced.

If the brakes are applied continuously for a long time (e.g. while riding downhill for a long time), the fluid in the brake system may heat up. This may create a vapour bubble. This will cause air bubbles or water contained in the brake system to expand. This may suddenly make the lever travel wider. This may cause a crash with serious injuries.

- Release the brake regularly when riding downhill for a longer period of time.

The motor drive force is shut off during the ride as soon as the rider is no longer pedalling. The drive system does not switch off when braking.

- In order to achieve optimum braking results, do not pedal while braking.

### 6.19.1 Using the brake lever

**Figure 126: Brake lever, rear (1) and front (2), SHIMANO brake used as an example**

- Push the left-hand brake lever to apply the front wheel brake.
- Push the right-hand brake lever to apply the rear wheel brake.
- Turn the setting wheel in an anti-clockwise direction to increase the rebound speed.
- Turn the setting wheel in a clockwise direction to decrease the rebound speed.
6.20  Gear shift

The selection of the appropriate gear is a prerequisite for a physically comfortable ride and making sure that the electric drive system functions properly. The ideal pedalling frequency is between 70 and 80 revolutions per minute.

► Stop pedalling briefly when changing gears. This makes it easier to switch gears and reduces wear on the drivetrain. However, keep the crank moving while switching gears.

6.20.1 Using the derailleur gears

Only applies to pedelecs with this equipment

The speed and range can be increased while applying the same force if you select the right gear.

✔ Stop pedalling briefly when changing gears. This makes it easier to switch gears and reduces wear on the drivetrain. However, keep the crank moving while switching gears.

Lever A switches from a smaller pinion to a larger one. The number of pinions switched depends on the selected position of lever A.

► Place shifter A in position 1.

✔ System shifts one pinion higher.

► Place shifter A in position 2.

✔ System shifts two pinions higher.

Figure 127: Switching gears with lever A, using gear shift SL-M315 as an example

Lever B switches from a larger pinion to a smaller one.

► Place shifter B in position 1.

✔ System shifts one pinion lower.

Switching gears

► Select the appropriate gear with the gear shift unit.

✔ The gear shift switches the gear.

✔ The shifter returns to its original position.

► Clean and lubricate the rear derailleur if gear changes block.

Figure 128: Switching gears with lever B, using gear shift SL-M315 as an example
6.21 Parking

Notice
Heat or direct sunlight can cause the tyre pressure to increase above the permitted maximum pressure. This can destroy the tyres.

► Never park the pedelec in the sun.
► On hot days, regularly check the tyre pressure and adjust it as necessary.

Moisture penetrating at low temperatures may impair individual functions due to the open structural design.

► Always keep the pedelec dry and free from frost.
► If the pedelec is used at temperatures below 3 °C, the specialist dealer must perform maintenance beforehand and prepare it for winter use.

The pedelec's force of weight may cause the kickstand to sink into soft ground, possibly causing the pedelec to topple over as a result.

► The pedelec must be parked on firm, level ground only.

1 Switch off drive system (see section 6.17.2).
2 After getting off, use your foot to lower the kickstand completely before parking. Ensure that it is stable.
3 Park the pedelec carefully and check that it is stable.
4 Protect saddle with saddle cover if you park the pedelec outside.
5 Lock the pedelec with the bicycle lock.
6 Remove battery to protect against theft (see section 6.16.1.1).
7 Clean and service pedelec after every ride; see section 7.2.

Check list after each ride

<table>

Cleaning

- Lights and reflectors (see section 7.2.5)
- Brake (see section 7.2.5)
- Suspension fork (see section 7.2.1)
- Suspension seat post (see section 7.2.6)
- Rear frame damper (see section 7.2.7)
- Pedal (see section 7.2.4)

Service

- Suspension fork (see section 3)
6.21.1 Screwing in the quickly adjustable stem

Only applies to pedelecs with this equipment

Screw in the All Up stem to save space when parking.

1 Open stem clamping lever.

2 Pull handlebars into highest possible position.

3 Turn handlebars 90° in a clockwise direction.

4 Place handlebars at required height.

5 Close stem clamping lever.
6.21.2 Activating the lock function

Only applies to pedelecs with this equipment

- Remove the on-board computer used during set-up.
- The lock function is activated. The drive system now provides no assistance. However, the rider can continue to use the pedelec without assistance.
- The drive unit will emit a lock sound (an audible signal) as long as the drive system is switched on.
- The lock function status is displayed with a lock icon on the on-board computer for around 3 seconds.
7 Cleaning, servicing and maintenance

- Clean, service and maintain pedelec as indicated on check list. Complying with these measures is the only way to reduce wear on components, increase the operating hours and guarantee safety.

Cleaning, servicing and maintenance

**Crash caused by brake failure**

Oil or lubricant on the brake disc in a disc brake or on the rim of a rim brake can cause the brake to fail completely. This may cause a crash with serious injuries.

- Never allow oil or lubricant to come into contact with the brake disc or brake linings or on the rim of a rim brake.
- If the brake linings have come into contact with oil or lubricant, contact specialist dealer to have the components cleaned or replaced.
- Apply the brakes a few times to test them after cleaning, servicing or repair.

The brake system is not designed for use on a pedelec which is placed on its side or turned upside down. The brake may not function correctly as a result. This can cause a crash, which may result in injuries.

- If the pedelec is placed on its side or turned upside down, apply the brakes a couple of times before setting off to ensure they work as normal.

The brake seals are unable to withstand high pressures. Damaged brakes can fail and cause an accident with injury.

- Never clean the pedelec with a pressure washer or compressed air.

Take great care when using a hosepipe. Never point the water jet directly at the seal section.

**Notice**

**Crash and falling caused by unintentional activation**

There is a risk of injury if the drive system is activated unintentionally.

Remove the battery before cleaning.

- Never clean pedelec with a pressure washer, water jet or compressed air.

Greased parts, such as the seat post, the handlebars or the stem, may no longer be safely and reliably clamped.

- Never apply grease or oil to parts which are clamped.

Harsh cleaning agents such as acetone, methylene and trichloroethylene and solvents such as thinners, alcohol and corrosion protection can attack pedelec components and damage them permanently.

- Use approved bicycle or pedelec cleaning and care products only.

**WARNING**

**CAUTION**
7.1 **Before each ride**

Complying with these cleaning instructions is the only way to reduce wear on components, increase the operating hours and guarantee safety.

7.1.1 **Checking the guards**

The chain or belt guards, mudguards or the motor cover can break off and go missing when the pedelec is transported or parked outside.

- Check that all guards are in place.

7.1.2 **Checking the frame**

- Check frame for cracks, warping and damage to the paintwork.

- If there are any cracks, warping or damage to the paintwork, remove the pedelec from service. Contact specialist dealer.

7.1.3 **Checking the fork**

- Check fork for cracks, warping, tarnished components, leaked oil and damage to the paintwork. Also look at hidden parts on the underside.

- If there are any cracks, warping, tarnished components, leaked oil or damage to the paintwork, remove the pedelec from service. Contact specialist dealer.

7.1.4 **Checking the rear frame damper**

- Check rear frame damper for cracks, warping, tarnished components, leaked oil and damage to the paintwork. Also look at hidden parts on the underside.

- If there are any cracks, warping, tarnished components, leaked oil or damage to the paintwork, remove the pedelec from service. Contact specialist dealer.

7.1.5 **Checking the pannier rack**

1. Hold onto pedelec by its frame. Hold onto pannier rack with the other hand.

2. Move the pannier rack backwards and forwards to check that all screw connections are firmly in place.

- Tighten loose screws.

- Attach loose baskets permanently with a basket bracket or cable ties.

7.1.6 **Checking the guards**

1. Hold onto pedelec by its frame. Hold onto mudguard rack with the other hand.

2. Move the mudguard backwards and forwards to check that all screw connections are firmly in place.

- Tighten loose screws.

7.1.7 **Checking wheel concentricity**

- Lift the front and rear wheels one after the other. and spin each wheel when lifted.

- If the wheel is loose or is crooked when it turns, take pedelec out of service. Contact specialist dealer.

7.1.8 **Checking the quick releases**

- Check quick releases to ensure that all quick releases are firmly in their fully closed end position.

- If a quick release is not firmly in its closed end position, open quick release and place in its end position.

- If the quick release cannot be firmly placed in its end position, take pedelec out of service. Contact specialist dealer.

7.1.9 **Checking the suspension seat post**

- Deflect and let the suspension seat post rebound.

- If you hear unusual noises when the suspension seat post deflects and rebounds, or it yields without any resistance, take pedelec out of service. Contact specialist dealer.
7.1.10 Checking the bell

1. Press the bell button downwards.
2. Let button spring back.
   - If you do not hear a clear, distinct ring of the bell, replace bell. Contact specialist dealer.

7.1.11 Checking the handles

- Check the handles are firmly in place.
- Screw loose handles firmly into place.

7.1.12 Checking the USB cover

- If featured, check the position of the cover on the USB port on a regular basis and adjust if necessary.

7.1.13 Checking the lighting

1. Switch light on.
2. Check that the front and rear lights come on.
   - If the front and rear lights do not come on, take pedelec out of service. Contact specialist dealer.

7.1.14 Checking the brake

1. Pull both brake levers when stationary.
2. Push the pedals.
   - If no resistance is generated in the usual brake lever position, take pedelec out of service. Contact specialist dealer.
   - If the brake is losing fluid, take pedelec out of service. Contact specialist dealer.
7.2 After each ride

Complying with these cleaning instructions is the only way to reduce wear on components, increase the operating hours and guarantee safety.

The following items should be ready for use to clean the pedelec after each ride:

<table>
<thead>
<tr>
<th>Tool</th>
<th>Cleaning agent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cloth</td>
<td>Bucket</td>
</tr>
<tr>
<td></td>
<td>Water</td>
</tr>
<tr>
<td></td>
<td>Dish-washing liquid</td>
</tr>
<tr>
<td>Brush</td>
<td>Fork oil</td>
</tr>
</tbody>
</table>

Table 44: Required tools and cleaning agents after each ride

7.2.1 Cleaning the lights and reflectors

1. Clean front light, rear light and reflectors with a damp cloth.

7.2.2 Cleaning the suspension fork

1. Remove dirt and deposits from the stanchions and deflector seals with a damp cloth. Check the stanchions for dents, scratches, staining or leaking oil.

2. Lubricate the dust seals and stanchions with a few drops of silicone spray.

3. Care for the suspension fork after cleaning.

7.2.3 Caring for the suspension fork

- Treat dust seals with fork oil.

7.2.4 Cleaning the pedals

- Clean pedals with a brush and soapy water.

7.2.5 Cleaning the brake

- Clean dirt on the rim and brake components with a slightly dampened cloth.

7.2.6 Cleaning the suspension seat post

- Clean dirt on the articulated joints with a slightly dampened cloth immediately after a ride.

7.2.7 Cleaning the rear frame damper

- Clean dirt on the articulated joints with a slightly dampened cloth immediately after a ride.
7.3 Basic cleaning

Complying with these basic cleaning instructions is the only way to reduce wear on components, increase the operating hours and guarantee safety.

The following are required for basic cleaning:

<table>
<thead>
<tr>
<th>Tool</th>
<th>Cleaning agent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gloves</td>
<td>Toothbrush</td>
</tr>
<tr>
<td>Cloth</td>
<td>Paintbrush</td>
</tr>
<tr>
<td>Sponge</td>
<td>Watering can</td>
</tr>
<tr>
<td>Brushes</td>
<td>Bucket</td>
</tr>
</tbody>
</table>

Table 45: Required tools and cleaning agents for basic cleaning

1. Remove battery and on-board computer before thorough cleaning.

7.3.1 On-board computer and control panel

Notice

If water enters the on-board computer, it will be permanently damaged.

- Never immerse the on-board computer in water.
- Never use a cleaning agent.
- Carefully clean the on-board computer and control panel with a soft, damp cloth.

7.3.2 Rechargeable battery

![CAUTION]

Risk of fire and explosion due to penetration by water

The battery is only protected from simple spray water. Penetration by water can cause a short circuit. The battery may self-ignite and explode.

- Keep contacts dry and clean.
- Never immerse the battery in water.

Notice

- Never use a cleaning agent.

1. Clean the battery electrical connections with a dry cloth or paintbrush only.

2. Wipe off the decorative sides with a damp cloth.

7.3.3 Motor

Notice

If water enters the motor, it will be permanently damaged.

- Never open the motor.
- Never immerse the motor in water.
- Never use cleaning agents.
- Carefully clean the motor on the outside with a soft, damp cloth.
7.3.4 Frame, fork, pannier rack, guards and kickstand

1 Soak the components with dish-washing detergent if the dirt is thick and ingrained.
2 After leaving it to soak for a short time, remove the dirt and mud with a sponge, brush and toothbrushes.
3 Rinse off the components with water from a watering can.
4 Wipe away oil stains with a degreaser.

7.3.5 Stem

1 Clean stem with a cloth and soapy water.
2 Rinse off component with water from a watering can.

7.3.6 Handlebars

1 Clean handlebars, including handles and all gears or twist grips, with a cloth and soapy water.
2 Rinse off component with water from a watering can.

7.3.7 Handles

1 Clean handles with sponge, water and soapy water.
2 Rinse off component with water from a watering can.
3 Care for rubber handles after cleaning (see Section 7.4.8).

7.3.7.1 Leather handles

Leather is a natural product and has similar properties to human skin. Regular cleaning and care help to prevent leather dehydrating, fading or becoming brittle or stained.

1 Remove dirt with a soft, damp cloth.
2 Remove stubborn stains with a leather cleaner.
3 Care for leather handles after cleaning (see Section 7.4.8.2).

7.3.8 Seat post

1 Clean seat post with a cloth and soapy water.
2 Rinse off component with water from a watering can.
3 Wipe away any grease or assembly paste residue with a cloth and degreaser.

7.3.9 Saddle

1 Clean the saddle with lukewarm water and a cloth dampened with soapy water.
2 Rinse off component with water from a watering can.
7.3.9.1 Leather saddle

Leather is a natural product and has similar properties to human skin. Regular cleaning and care help to prevent leather dehydrating, fading or becoming brittle or stained.

1. Remove dirt with a soft, damp cloth.
2. Remove stubborn stains with a leather cleaner.
3. Care for leather saddle after cleaning (see Section 7.4.11).

7.3.10 Tyres

1. Clean tyres with a sponge, a brush and soap cleaner.
2. Rinse off component with water from a watering can.
3. Remove any embedded chips and small stones.

7.3.11 Spokes and spoke nipples

1. Clean spokes from the inside to the outside with a sponge, brush and soapy water.
2. Clean rim with a sponge.
3. Rinse off component with water from a watering can.
4. Care for spoke nipples after cleaning (see Section 7.4.13).

7.3.12 Hub

1. Put on protective gloves.
2. Remove dirt from hub with a sponge and soapy water.
3. Rinse off component with water from a watering can.
4. Wipe off oily dirt with a degreaser and a cloth.

7.3.13 Switching elements

1. Clean gear shift, shift cables and transmission with water, a brush and dish-washing detergent.
2. Rinse off component with water from a watering can.

7.3.13.1 Shifter

Carefully clean shifter with a damp, soft cloth.

7.3.14 Cassette, chain wheels and front derailleur

1. Put on protective gloves.
2. Spray the cassette, the chain wheels and the front derailleur with a degreasing agent.
3. Clean coarse dirt with a brush after soaking for a short time.
4. Wash down all parts with dish-washing detergent and a toothbrush.
5. Rinse off component with water from a watering can.
7.3.15 Brake

7.3.15.1 Brake lever

- Carefully clean the brake levers with a damp, soft cloth.

7.3.16 Brake disc

Notice
- Protect brake disc against lubricants and grease from hands.

1. Put on protective gloves.
2. Spray brake disc with brake disc cleaning spray.
3. Wipe with a cloth.

7.3.17 Belt

Notice
- Never use aggressive (acid-based) cleaners, rust removers or degreasers when cleaning the belt.

1. Dampen a cloth with soapy water. Place the cloth on the belt.
2. Hold and apply slight pressure while slowly turning the rear wheel, so the belt passes through the cloth.

7.3.18 Chain

7.3.18.1 Chain with all-round chain guard

Notice
- Clean water hole on the chain guard lower surface.
- Care for chain after cleaning (see Section 7.4.16.1).

- Never use aggressive (acid-based) cleaners, rust removers or degreasers when cleaning the chain.
- Never use gun oil or rust remover spray.
- Never use chain cleaning devices or chain cleaning baths.
- Have chain with all-round guard cleaned and cared for during maintenance.
- Place newspaper or paper towels underneath to collect dirt.
- Slightly dampen a brush with dish-washing liquid. Brush both sides of the chain.
- Dampen a cloth with soapy water. Place the cloth on the chain.
- Hold and apply slight pressure while slowly turning the rear wheel, so the chain passes through the cloth.
- Wipe off oily, dirty chains thoroughly with a cloth and degreaser.
- Care for chain after cleaning (see Section 7.4.16).

Notice
- Never use aggressive (acid-based) cleaners, rust removers or degreasers when cleaning the chain.
- Never use gun oil or rust remover spray.
- Never use chain cleaning devices or chain cleaning baths.
- Have chain with all-round guard cleaned and cared for during maintenance.
- Place newspaper or paper towels underneath to collect dirt.
- Slightly dampen a brush with dish-washing liquid. Brush both sides of the chain.
- Dampen a cloth with soapy water. Place the cloth on the chain.
- Hold and apply slight pressure while slowly turning the rear wheel, so the chain passes through the cloth.
- Wipe off oily, dirty chains thoroughly with a cloth and degreaser.
- Care for chain after cleaning (see Section 7.4.16).

Notice
- Never use aggressive (acid-based) cleaners, rust removers or degreasers when cleaning the chain.
- Never use gun oil or rust remover spray.
- Never use chain cleaning devices or chain cleaning baths.
- Have chain with all-round guard cleaned and cared for during maintenance.
- Place newspaper or paper towels underneath to collect dirt.
- Slightly dampen a brush with dish-washing liquid. Brush both sides of the chain.
- Dampen a cloth with soapy water. Place the cloth on the chain.
- Hold and apply slight pressure while slowly turning the rear wheel, so the chain passes through the cloth.
- Wipe off oily, dirty chains thoroughly with a cloth and degreaser.
- Care for chain after cleaning (see Section 7.4.16).

Notice
- Never use aggressive (acid-based) cleaners, rust removers or degreasers when cleaning the chain.
- Never use gun oil or rust remover spray.
- Never use chain cleaning devices or chain cleaning baths.
- Have chain with all-round guard cleaned and cared for during maintenance.
- Place newspaper or paper towels underneath to collect dirt.
- Slightly dampen a brush with dish-washing liquid. Brush both sides of the chain.
- Dampen a cloth with soapy water. Place the cloth on the chain.
- Hold and apply slight pressure while slowly turning the rear wheel, so the chain passes through the cloth.
- Wipe off oily, dirty chains thoroughly with a cloth and degreaser.
- Care for chain after cleaning (see Section 7.4.16).

Notice
- Never use aggressive (acid-based) cleaners, rust removers or degreasers when cleaning the chain.
- Never use gun oil or rust remover spray.
- Never use chain cleaning devices or chain cleaning baths.
- Have chain with all-round guard cleaned and cared for during maintenance.
- Place newspaper or paper towels underneath to collect dirt.
- Slightly dampen a brush with dish-washing liquid. Brush both sides of the chain.
- Dampen a cloth with soapy water. Place the cloth on the chain.
- Hold and apply slight pressure while slowly turning the rear wheel, so the chain passes through the cloth.
- Wipe off oily, dirty chains thoroughly with a cloth and degreaser.
- Care for chain after cleaning (see Section 7.4.16).
7.4 Servicing

Complying with these servicing instructions is the only way to reduce wear on components, increase the operating hours and guarantee safety.

Figure 132: Diagram showing wear, operating hours (x) vs. material erosion (y)

The service life (3) of an optimally serviced drive chain (1) is almost three times as long with lubrication (A) compared to a drive chain (2) lubricated on an irregular basis.

These tools and cleaning agents are required for servicing:

<table>
<thead>
<tr>
<th>Tool</th>
<th>Cleaning agent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cloth</td>
<td>Toothbrush</td>
</tr>
<tr>
<td></td>
<td>Frame wax spray</td>
</tr>
<tr>
<td></td>
<td>Silicone or Teflon oil</td>
</tr>
<tr>
<td></td>
<td>Acid-free lubricating grease</td>
</tr>
<tr>
<td></td>
<td>Fork oil</td>
</tr>
<tr>
<td></td>
<td>Teflon spray</td>
</tr>
<tr>
<td></td>
<td>Spray oil</td>
</tr>
<tr>
<td></td>
<td>Chain oil</td>
</tr>
<tr>
<td></td>
<td>Leather care product</td>
</tr>
</tbody>
</table>

Table 46: Required tools and cleaning agents for servicing

7.4.1 Frame

Notice

- Hard wax polish and protection wax are particularly resistant on gloss paintwork. These car accessory retail products are unsuitable for matt paint finishes.
- Try wax spray out on a small spot before application.

1 Dry frame with a cloth.
2 Spray frame with spray wax and leave to dry.
3 Wipe away any wax residue with a cloth.

7.4.2 Fork

Notice

- Hard wax polish and protection wax are particularly resistant on gloss paintwork. These car accessory retail products are unsuitable for matt paint finishes.
- Try wax spray out on a small spot before application.

1 Dry frame with a cloth.
2 Spray care oil on frame and leave to dry.
3 Wipe away any wax residue with a cloth.
7.4.3 Pannier rack

1 Dry pannier rack with a cloth.
2 Spray pannier rack with spray wax and leave to dry.
3 Wipe pannier rack with a cloth.
4 Protect chafing points on panniers with adhesive film. Replace worn adhesive film.
5 Care for coil springs with silicone spray or wax spray from time to time.

7.4.4 Mudguard

► Depending on the requirements for the material in the mudguard, apply hard wax polish, metal polish or a plastic care product as per the product instructions.

7.4.5 Servicing the kickstand

1 Dry kickstand with a cloth.
2 Spray kickstand rack with spray wax and leave to dry.
3 Wipe down kickstand with a cloth.
4 Lubricate the kickstand joints with spray oil.

7.4.6 Stem

1 Spray painted and polished metal surfaces with wax spray and leave to dry.
2 Wipe away any wax residue with a cloth.
3 Apply silicone or Teflon oil to the stem shaft tube and the quick release lever pivot point with a cloth.
4 If you have a Speedlifter Twist, also apply oil to the unlocking bolt groove in the Speedlifter body.
5 Apply a little acid-free lubricant grease between the stem quick release lever and the sliding piece to reduce the quick release lever operating force.
6 If you have a stem with a cone clamp, apply a new protective layer of assembly paste onto the stem and fork steerer contact point once a year.

7.4.7 Handlebars

7.4.8 Handle

7.4.8.1 Rubber handles

1 Apply talcum powder to sticky rubber handles.

Notice

► Never apply talcum powder to leather or foam handles.

7.4.8.2 Leather handle

Standard leather care products keep leather smooth and resistant, brighten its appearance and improve or replace stain protection.
1 Try leather care product out on a less visible spot before use.
2 Care for leather handles with a leather care product.
Cleaning and servicing

7.4.9 Seat post

1. Carefully preserve screw connections with wax spray. In doing so, ensure that no wax is applied to the metal contact surfaces.

2. Replace the assembly paste protective layer on the metal contact surfaces on the seat post and seat tube every year.

7.4.9.1 Suspension seat post

1. Lubricate articulated joints with spray oil.

2. Deflect and let the suspension seat post rebound five times. Remove any surplus lubricant with a clean cloth.

7.4.9.2 Carbon seat post

1. Take out the carbon seat post.

2. Remove old assembly paste with a cloth.

3. Apply new assembly paste with a cloth.

4. Re-insert the carbon seat post.

7.4.10 Rim

1. Care for chrome rims, stainless steel rims and polished aluminium with chrome or metal polish. Never care for the brake surface with polish.

7.4.11 Leather saddle

Standard leather care products keep leather smooth and resistant, brighten its appearance and improve or replace stain protection.

1. Try leather care product out on a less visible spot before use.

2. Care for leather saddle from below with a leather care product. Only care for the top of leather saddles with a leather care product if they are badly worn and dried-out.

3. Avoid wearing light-coloured trousers after care due to staining.

7.4.12 Hub

1. Apply wax spray especially around the spoke holes. In doing so, ensure that no wax is applied to brake parts.

2. Treat rubber seals with a cloth with one or two drops of silicone spray. Never use oil if you have disc brakes.

7.4.13 Spoke nipples

1. Apply wax spray onto the spoke nipples from the rim side.

2. Treat heavily corroded spoke nipples with a drop of penetrating of special care oil.

Notice

Rain and puddle water can cause contact corrosion if carbon seat posts are used in an aluminium frame without protective assembly paste. It may then take a great deal of force to remove the seat post. The carbon seat post may break as a result.
### 7.4.14 Gear shift

#### 7.4.14.1 Rear derailleur articulated shafts and jockey wheels

- Treat front and rear derailleur articulated shafts and jockey wheels with Teflon spray.

#### 7.4.14.2 Shifter

- Lubricate articulated joints and mechanical parts which are accessible from outside with a few drops of spray oil or precision mechanics oil.

### Notice

- Never treat shifters with degreaser or penetrating oil spray.

- Lubricate articulated joints and mechanical parts which are accessible from outside with a few drops of spray oil or precision mechanics oil.

### 7.4.15 Pedal

1. Treat pedals with spray oil. In doing so, ensure that no lubricant is applied to the pedal surfaces.
2. Lubricate seals and mechanical parts sparingly with a few drops of oil.
3. Remove any surplus lubricant with a clean cloth.
4. Spray metal foot rests with silicone spray.

### 7.4.16 Caring for the chain

- Place newspaper or paper towels underneath to collect chain oil.
1. Lift rear wheel.
2. Turn the crank briskly in an anti-clockwise direction.
3. Use slight finger pressure to the chain oil bottle to apply a wafer-thin thread of oil to the chain links. The faster the crank is turned, the thinner the threads of oil will be.

![Figure 133: Lubricating the chain](image)

- Remove excessive chain oil with a cloth. If you apply too much oil, it will make the chain all the dirtier at a later point in time.
- Leave chain oil to penetrate into the chain links for a few hours or overnight.
7.4.16.1 Caring for the chain and all-round chain guard

- Place newspaper or paper towels underneath to collect chain oil.

1. Lift rear wheel.

2. Turn the crank briskly in an anti-clockwise direction.

3. Use slight finger pressure to the chain oil bottle to apply a wafer-thin thread of oil onto the chain links through the oil hole on the upper surface of the chain guard. The faster the crank is turned, the thinner the threads of oil will be.

4. Remove excessive chain oil with a cloth. If you apply too much oil, it will make the chain all the dirtier at a later point in time.

5. Leave chain oil to penetrate into the chain links for a few hours or overnight.

7.4.17 Caring for the battery

-Grease plug terminals on the battery with terminal grease or contact spray from time to time.

7.4.18 Caring for the brake

7.4.18.1 Caring for the brake

**Notice**

- Never treat brake levers with degreaser or penetrating oil spray.

- Lubricate articulated joints and mechanical parts which are accessible from outside with a few drops of spray oil or precision mechanics oil.

7.4.19 Lubricating the Eightpins seat post tube

- Use a 2.5 ml syringe to carefully fill Eightpins Fluid V3 very slowly into the lubricating nipple on the outer tube.

**Notice**

- Fill a maximum of 2.5 ml since otherwise the reservoir inside will overflow and the oil will spill into the frame.
7.5 Maintenance

The following tools are required for maintenance:

<table>
<thead>
<tr>
<th>Tool</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gloves</td>
<td></td>
</tr>
<tr>
<td>Ring spanners</td>
<td>8 mm, 9 mm, 10 mm, 13 mm, 14 mm and 15 mm</td>
</tr>
<tr>
<td>Torque wrench</td>
<td>Working range 5–40 Nm</td>
</tr>
<tr>
<td>by.schulz handlebars:</td>
<td>TORX® bits: 4 mm, 5 mm and 6 mm</td>
</tr>
<tr>
<td>If not:</td>
<td>Hexagon bits: 4 mm, 5 mm and 6 mm</td>
</tr>
<tr>
<td>Hexagon socket spanner</td>
<td>2 mm, 2.5 mm, 3 mm, 4 mm, 5 mm, 6 mm and 8 mm</td>
</tr>
<tr>
<td>Spline nut socket T25</td>
<td></td>
</tr>
<tr>
<td>Cross-recess screwdriver</td>
<td></td>
</tr>
<tr>
<td>Slotted-head screwdriver</td>
<td></td>
</tr>
</tbody>
</table>

Table 47: Tools required for maintenance

7.5.1 Wheel

1 Hold pedelec.

2 Hold onto the front or rear wheel and try to move the wheel sideways. In doing so, check to see if the wheel nuts or quick releases move.

✓ If the wheel, the wheel nut or quick release moves sideways, take pedelec out of service. Contact specialist dealer.

3 Lift pedelec slightly. Turn front or rear wheel. In doing so, check whether the wheel deflects sideways or outwards.

✓ If the wheel deflects sideways or outwards, take pedelec out of service. Contact specialist dealer.

7.5.1.1 Checking the tyre pressure

Notice

If the tyre pressure is too low in the tyre, the tyre does not achieve its load bearing capacity. The tyre is not stable and may come off the rim.

➢ If the tyre pressure is too high, the tyre may burst.

Tyres are wear parts and wear away due to fatigue, storage, environmental influences or mechanical impacts. Only optimum tyre pressure will guarantee effective protection against punctures, lower rolling resistance, a longer service life and greater safety.

Air loss

Even the most airtight tube will lose pressure on a continuous basis since the air pressures in a pedelec tyre are significantly higher and the wall thicknesses significantly finer than in a car tyre. Pressure loss of 1 bar per month can be regarded as normal. During this process, the pressure loss is significantly faster at high pressures and significantly slower at low pressures.

Checking tyre pressure

The permitted pressure range is indicated on the side of the tyre.

Figure 135: Tyre pressure in bar (1) and psi (2)

➢ Verify tyre pressure against the value noted in the pedelec pass every 10 days as a minimum.
Dunlop valve
Only applies to pedelecs with this equipment

The tyre pressure cannot be measured on the simple Dunlop valve. The tyre pressure is therefore measured in the filling hose when pumping slowly with the bicycle pump.

✔ It is recommendable to use a bicycle pump with a pressure gauge.

1 Unscrew and remove the valve cap.
2 Undo the rim nuts.
3 Connect the bicycle pump.
4 Pump up the tyre slowly and pay attention to the tyre pressure in the process.
5 Correct the tyre pressure to meet the specified value in the Pedelec pass.
6 If the tyre pressure is too high, unfasten the union nut, let air out and re-tighten the union nut.
7 Remove the bicycle pump.
8 Screw the valve cap tight.
9 Screw the rim nut gently against the rim with the tips of your fingers.

✔ Correct tyre pressure if necessary (see Section 6.5.10).

Schrader valve
Only applies to pedelecs with this equipment

✔ It is recommended to use the air pump at a filling station. Older and easy bicycle pumps are unsuitable for filling tyres via a Schrader valve.

1 Unscrew and remove the valve cap.
2 Undo the rim nuts.
3 Attach the bicycle pump.
4 Pump up the tyre slowly and pay attention to the tyre pressure in the process.

✔ The tyre pressure has been adjusted as per the specifications.
5 Remove the bicycle pump.
6 Screw the valve cap tight.
7 Screw the rim nut gently against the rim with the tips of your fingers.

✔ Correct tyre pressure if necessary (see Section 6.5.10).

Presta valve
Only applies to pedelecs with this equipment

✔ It is recommendable to use a bicycle pump with a pressure gauge. The operating instructions for the bicycle pump must be adhered to.

1 Unscrew and remove the valve cap.
2 Open the knurled nut around four turns.
3 Carefully apply the bicycle pump so that the valve insert is not bent.
4 Pump up the tyre slowly and pay attention to the tyre pressure in the process.
5 Correct the tyre pressure as per the specifications on the tyre.
6 Remove the bicycle pump.
7 Tighten the knurled nut with your fingers.
8 Screw the valve cap tight.
9 Screw the knurled nut gently against the rim with the tips of your fingers.

✔ Correct tyre pressure if necessary (see Section 6.5.10).
7.5.1.2 Checking the tyres

The tread is far less important for bicycle tyres than it is for car tyres, for example. Consequently, tyres can still be used with a worn tread with the exception of tyres on mountain bikes.

1 Check the tread wear. The tyre is worn if the anti-puncture protection or the carcass cords are visible.

Since resistance to punctures also depends on the thickness of the tread, it may make sense to change the tyre at an earlier stage.

2 Check the side walls for wear. If there are any cracks or tears, the tyre must be replaced.

Figure 136: Tyre without tread which can still be used (1) and tyre with puncture protection showing through (2), which needs to be replaced.

Figure 137: Examples of fatigue cracks (1) and ageing cracks (2)

Replacing a wheel requires considerable mechanical expertise. If a tyre is worn, it needs to be replaced at a specialist dealer’s.
7.5.1.3 Checking the rims

**WARNING**

**Crash caused by a worn rim**

A worn rim can break and block the wheel. This may cause a crash with serious injuries.

- Check rim wear on a regular basis.
- Take pedelec out of service if the rim has any cracks or warping. Contact specialist dealer.

Rims are wear parts and wear away due to fatigue, mechanical impacts, environmental influences or due to braking if rim brakes are used.

- Check the rim well for wear.
- The rims of a rim brake with invisible wear indicator are worn as soon as the wear indicator becomes visible in the area of the rim joint.
- The rims with visible wear indicator are worn as soon as the black, all-round groove on the pad friction surface is no longer visible. We recommend that you also replace the rims with every second brake lining replacement.
- We recommend that you also replace the rims at the same time as every second brake lining replacement.

7.5.1.4 Checking the nipple holes

Nipples cause fatigue and stress on the edge of the nipple hole.

- Check whether there are cracks on the edge of the nipple hole.

If there are cracks on the edge of the nipple hole, contact your specialist dealer.

7.5.1.5 Checking the nipple well

The nipple holes can weaken the tyre bed.

- Check to see if cracks are emerging from the nipple holes.
- If there are cracks radiating from the nipple hole, contact your specialist dealer.

7.5.1.6 Checking the rim hooks

Mechanical impacts can warp the rim hooks. There is no longer a guarantee that a tyre can be fitted safely if this is the case.

- Check for twisted rim hooks.
- Replace rims with twisted rim hooks. Never repair the rim with pliers and bend the hook back.

7.5.1.7 Checking the spokes

- Press spokes slightly together with your thumb and index finger. Check to ensure that the tension is the same for all spokes.
- Contact your specialist dealer if the spokes are loose or are tensioned differently.
7.5.2 Checking the brake system

Crash caused by brake failure
Worn brake discs and brake linings and a lack of hydraulic fluid in the brake line reduce the braking power. This may cause a crash with serious injuries.

► Check brake disc, brake linings and the hydraulic brake system regularly. Contact specialist dealer.

The maintenance interval for the brake depends on how often it is used and the weather conditions. If the pedelec is used under extreme conditions such as rain, dirt or high mileage, maintenance must be performed more frequently.

7.5.2.1 Checking the hand brake
1 Check whether all screws in the handbrake are firmly in place.
► Tighten loose screws.

2 Check whether the brake lever is torsionally rigid on the handlebars.
► Tighten loose screws.

3 Check that there is a gap of at least 1 cm between the handbrake lever and the handle when the brake lever is fully applied.
► Adjust the grip distance if the gap is too narrow (see Section 6.5.9.6, Section 6.5.10.1 or Section 6.5.10.2).

4 Check the braking effect by pedalling while pulling the brake lever.
► If the braking power is too weak, adjust the brake pressure point (see Section 6.5.9.8).
► Contact your specialist dealer if the pressure point cannot be reached.

7.5.2.2 Checking the hydraulic system
1 Push the brake lever and check whether any brake fluid leaks out of the lines, connections or on the brake linings.
► If any brake fluid leaks from anywhere, take pedelec out of service. Contact specialist dealer.

2 Push brake lever and hold several times.
► If you are unable to clearly detect the pressure point and it changes, the brake needs to be bled. Contact specialist dealer.

7.5.2.3 Checking the Bowden cables
1 Pull on the brake lever several times. Check whether the Bowden cables get stuck or they make scraping noises.

2 Check the physical condition of the Bowden cables for visible damage and check to see if wire strands are broken.
► Have defective Bowden cables replaced. Contact specialist dealer.

Crash caused by brake failure
Worn brake discs and brake linings and a lack of hydraulic fluid in the brake line reduce the braking power. This may cause a crash with serious injuries.
7.5.2.4 Checking the disc brake  
Only applies to pedelecs with this equipment

Checking the brake linings

- Check that the brake linings are no less than 1.8 mm wide at any point and there are no less than 2.5 mm between the brake lining and supporting plate.

![Figure 138: Checking the brake lining when fitted with the help of the transport safety wear gauge](image)

1. Check brake linings for damage and thick dirt.
   - Have damaged or very dirty brake linings replaced. Contact specialist dealer.

2. Push brake lever and hold.

3. In doing so, check whether the transport safety wear gauge can fit between the brake lining supporting plates.
   - If the transport safety wear gauge fits between the supporting plates, the brake linings have not reached their wear limit. Contact your specialist dealer if they are worn.

Checking the brake discs

- Put on gloves as the brake disc is very sharp.

1. Take hold of brake disc and joggle it gently to check whether the brake disc is positioned against the wheel free of backlash.

2. Check that the brake linings move uniformly and symmetrically back towards the brake disc when you pull and release the brake lever.
   - If the brake disc can be moved or the brake linings move erratically, contact your specialist dealer.

3. Check that the brake disc is no less than 1.8 mm thick at any point.
   - If the brake disc is under the wear limit and is less than 1.8 mm thick, the brake disc must be replaced. Contact specialist dealer.
7.5.2.5 Checking the back-pedal brake
Only applies to pedelecs with this equipment

✔ There are sharp corners and edges on the back-pedal brake. Wear gloves.

1 Hold and check counter support to ensure it is firmly attached to rear frame down tube.
   ⇨ Tighten screw into the counter support if it is loose.

2 Carry out brake test. Listen for noises while doing so.
   ⇨ If braking with the backpedal makes noises, contact specialist dealer.
7.5.2.6 Checking the rim brake
Only applies to pedelecs with this equipment

Checking the brake linings

► We recommend that you also replace the rims at the same time as every second brake lining replacement.

1 Check whether the brake linings are worn evenly on both sides of the rim.

2 Check whether the brake linings are worn to one side.
   ⇔ If the brake linings are worn unevenly or worn to one side, contact your specialist dealer.

3 Check whether the brake lining wear limit has been reached.
   ⇔ If the brake linings have reached their wear limit, they need to be changed. Contact specialist dealer.

4 Check whether the brake linings can be twisted.
   ⇔ If the brake linings twist, the brake lining bracket is defective and must be replaced. Contact specialist dealer.

5 Check that the brake linings move uniformly and symmetrically towards the rim when you pull and release the brake lever.
   ⇔ If the brake linings move unevenly, contact your specialist dealer.

Checking the rim braking surface for wear

The side wall is more prone to wear in rim brakes. The wear depends on the stress loads during rides. Dirt between the brake lining and rim and strong braking forces can have an impact on the service life.

The rim must be replaced if the wall is less than 0.9 mm thick. If deep grooves are visible, rim hooks will warp towards the outside or the braking power will change, contact your specialist dealer as soon as possible.

► Replacing a rim requires considerable mechanical expertise. Only a specialist dealer should carry out this task.
7.5.3 Checking the lighting

1 Check the cable connections on the front and rear lights for damage and corrosion and ensure they are firmly in position.

- If cable connections are damaged or corroded, or are not firmly in position, take pedelec out of service. Contact specialist dealer.

2 Switch light on.

3 Check that the front and rear lights come on.

- If the front or rear lights do not come on, take pedelec out of service. Contact specialist dealer.

4 Place pedelec 5 m from the wall.

5 Stand the pedelec up straight. Hold the handlebars straight with both hands. Do not use the kickstand.

6 Check the position of the light beam.

- If the light is positioned too high or too low, adjust riding light (see Section 6.5.17).

Figure 139: Light positioned too high (1), correctly (2) and too low (3)
7.5.4 Checking the stem

- The stem and quick release system must be inspected at regular intervals. The specialist dealer should adjust them if they require adjustment.
- If the hexagon socket head screw is also loosened, the headset backlash also needs to be adjusted. Medium-strength thread locker, such as Loctite blue, then needs to be applied to the loosened screws and the screws tightened as per specifications.
- Check metal contact surfaces on cone, stem clamping screw and fork steerer for corrosion.
- Take pedelec out of service if there is any wear or signs of corrosion. Contact specialist dealer.

7.5.5 Check the handlebars

1. Take hold of handlebars with both hands on the handles.
2. Move handlebars up and down and press to tilt.
   - If the handlebars move, contact specialist dealer.
3. Place front wheel in position where it can’t move sideways (e.g. in a bike stand).
4. Hold handlebars firmly with both hands.
5. Check if the handlebars are able to twist against the front wheel.
   - If the handlebars can move, contact your specialist dealer.

7.5.6 Checking the saddle

1. Hold saddle firmly.
2. Check whether the saddle twists, tilts or can be pushed in one direction or other.
   - If the saddle twists, tilts or can be pushed in one direction or other, adjust the saddle (see Section xxx).
   - Contact your specialist dealer if the saddle cannot be fixed into position.

7.5.7 Checking the seat post

1. Take seat post out of the frame.
2. Check seat post for cracks and corrosion.
3. Reinsert seat post.
4. Check pedal.
5. Hold pedal and try to move it sideways toward the inside or outside. In doing so, observe whether the crank arm or bearing move sideways.
   - If the pedal, crank arm or crank bearing moves sideways, fasten screw on the pedal crank rear.
6. Hold pedal and try to move it upwards and downwards vertically. In doing so, observe whether the pedal, crank arm or crank bearing moves vertically.
   - If the pedal, crank arm or crank bearing moves vertically, fasten screw.

7.5.8 Checking the chain

- Check chain for rust or warping.
- Replace a rusted chain since it will not be able to withstand the tensile loads from the drive. Contact your specialist retailer.

7.5.9 Checking the chain and belt tension

Notice

Excessive chain tension increases wear. If the chain tension is too low, there is a risk that the chain will slip off the chain wheels.

- Check the chain tension once a month.

7. If a hub gear is fitted, the rear wheel must be pushed backwards and forwards to tighten the chain. Contact specialist dealer.
7.5.9.1 Checking the derailleur gears

The chain is tensioned by the rear derailleur in pedelecs with derailleur gears.

1. Place the pedelec on stand.
2. Check to see if the chain is sagging (visual inspection).
3. Gently press the rear derailleur forwards to check whether it moves and whether it goes back into position by itself.
   - If the chain is sagging or the rear derailleur does not go back into position by itself, contact your specialist dealer.

7.5.9.2 Checking the hub gear

In the case of pedelecs with a hub gear or back-pedal brake, the chain or the belt is tensioned by a eccentric bearing in the bottom bracket axle. Special tools and specialist knowledge are required to tension the chain. Contact specialist dealer.

- Remove the chain guard on pedelecs with a circumferential chain guard.

1. Place the pedelec on stand.
2. Check the chain and belt tension in three or four positions, turning the crank a full revolution.
   - If the chain or the belt can be pushed more than 2 cm, the chain will need to be re-tensioned. Contact specialist dealer.
   - If the chain or belt can only be pushed up and down less than 1 cm, you will need to the chain or belt slightly. Contact specialist dealer.
   - The ideal chain and belt tension has been achieved if the chain can be pushed between a maximum of 10 and 15 mm in the middle between the pinion and the toothed wheel. The crank must also turn without resistance.

7.5.10 Checking the gear shift

1. Check whether all gear shift components are free of damage.
2. Contact your specialist dealer if components are damaged.
3. Place the pedelec on stand.
4. Turn the pedal crank clockwise.
5. Switch through all speeds.
6. Check that pedelec can switch through all speeds without making unusual noises.
7. Adjust the gear shift if gears can not be changed correctly.

7.5.10.1 Electric gear shift

1. Check the cable connections for damage and corrosion and ensure they are firmly in position.
   - If cable connections are loose, damaged or corroded, contact your specialist dealer.

7.5.10.2 Mechanical gear shift

1. Change gear a number of times. Check whether the Bowden cables get stuck or they make scraping noises.
2. Check the physical condition of the Bowden cables for visible damage and check to see if wire strands are broken.
   - Have defective Bowden cables replaced. Contact specialist dealer.

7.5.10.3 Checking the derailleur gears

1. Check that there is clearance between the chain tensioner and spokes.
   - If there is no clearance or the chain scrapes against the spokes or tyres, contact your specialist dealer.
2. Check that there is clearance between the chain or rear derailleur and spokes.
   - If there is no clearance or the chain scrapes against the spokes, contact your specialist dealer.
7.5.11 Adjusting gear shift

7.5.11.1 ROHLOFF hub

Only applies to pedelecs with this equipment

1 Check whether the shift cable tension is set in such a way that there is a perceptible play of around 5 mm when the shift handle is turned.

2 Adjust the shift cable tension by turning the tension adjuster.

اسلینگ: Unscrew the tension adjuster to increase the shift cable tension.

اسلینگ: Tighten the tension adjuster to decrease the shift cable tension.

Figure 141: The tension adjuster on Rohloff hub versions with internal switch control is located on the tension counter support

Figure 142: The tension adjuster on Rohloff hub versions with external switch control is located on the cable box positioned on the left-hand side

3 If the marking and numbers on the shift handle to no longer coincide after the gear shift is adjusted, tighten one of the tension adjusters and screw out the other tension adjuster to the same extent.

7.5.12 Bowden-cable-operated gear shift, single-cable

Only applies to pedelecs with this equipment

- Adjust the play on the adjusting sleeves on the shifter housing to ensure a smooth gear shift.

Figure 143: Adjusting sleeve (1) for the single-cable, Bowden-cable-operated gear shift with shifter housing (2), example

7.5.13 Bowden-cable-operated gear shift, dual-cable

Only applies to pedelecs with this equipment

- For a smooth gear shift, set the adjusting sleeves underneath the chain stay on the frame.

- The shift cable has around 1 mm play when it is pulled out gently.

Figure 144: Adjusting sleeves (2) on two alternative versions (A and B) of a dual-cable, Bowden-cable-operated gear shift on the chain stay (1)
7.5.14 Bowden-cable-operated twist grip, dual-cable

Only applies to pedelecs with this equipment

► For a smooth gear shift, set the adjusting sleeves on the shifter housing.

✉ There is noticeable play of 2 to 5 mm (1/2 gear) when you turn the twist grip.

Figure 145: Twist grip with adjusting sleeves (1) and play in the gear shift (2)

7.5.15 Checking kickstand stability

1 Place the pedelec on a slight elevation of 5 cm.
2 Extend kickstand.
3 Jolt pedelec to check stability.

✉ If the pedelec topples over, tighten screws or change height of the kickstand.
8 Maintenance

8.1 Initial inspection

After 200 km or 4 weeks after purchase

Vibrations produced while riding can cause screws and springs that were tightened during manufacture of the pedelec to settle or come loose.

➤ Arrange an appointment for the initial inspection directly when purchasing the pedelec.

➤ Have the initial inspection entered and stamped in the maintenance book.

➤ Carrying out the initial inspection, see Section 8.4.

8.2 Maintenance

every six months

You must have your specialist dealer perform maintenance every six months as a minimum. This is the only way to ensure that the pedelec remains safe and fully functional.

Maintenance tasks require technical expertise, special tools and special lubricants. The pedelec may become damaged if the stipulated maintenance intervals and procedures are not carried out. This is why only specialist dealers may carry out maintenance.

➤ Contact your specialist dealer and arrange an appointment.

➤ Enter and stamp maintenance tasks in the maintenance book.

➤ Perform maintenance.

8.3 Component-specific maintenance tasks

High-quality components require extra maintenance. Maintenance tasks require technical expertise, special tools and special lubricants. The pedelec may become damaged if the stipulated maintenance intervals and procedures are not carried out. This is why only specialist dealers may carry out maintenance.

Correct maintenance on the fork not only guarantees a long service life, but also ensures optimal performance.

Each maintenance interval shows the maximum cycling hours for the required type of maintenance that the component manufacturer recommends.

➤ Optimise performance with shorter maintenance intervals, depending on use, terrain and environmental conditions.

➤ Enter any components with extra maintenance requirements with their corresponding maintenance intervals into the maintenance book when the pedelec is purchased.

➤ Inform the buyer of the additional maintenance schedule.

➤ Enter and stamp maintenance tasks in the maintenance book.
### Suspension fork maintenance intervals

</tbody>
</table>
8.4 Carry out initial inspection

Vibration produced while riding can cause screws and springs that were tightened during manufacture of the pedelec to settle or come loose.

- Check quick release system is fixed in position.
- Check all tightening torques of screws and screw connections.

Incorrectly fastened screws may come loose due to impact. The stem may no longer be firmly fixed in its position as a result. This will cause a crash with injuries.

Check the handlebars and the stem quick release system are firmly in position after the first two hours of riding.
## 8.5 Maintenance instructions

Complying with these maintenance instructions is the only way to reduce wear on components, increase the operating hours and guarantee safety.

8.5.1 Servicing the frame

1 Check frame for cracks, warping and damage to the paintwork.

➤ If there are any cracks, warping or damage to the paintwork, remove the pedelec from service. New frame as specified in the parts list.

8.5.1.1 Servicing the carbon frame

You need to distinguish between scratches on the paintwork and impacts if the carbon frame paintwork is damaged.

➤ Ask customer what caused the damage.

➤ Examine damage with a magnifying glass to see if fibres are permanently damaged.

Damage to paintwork

1 Gently sand paintwork damage with 600-grit sandpaper.

2 Smooth edges.

3 Apply one or two coats of repair paint.

Damage from impact

There may be damage to the laminate beneath the paintwork in the case of impact damage. The frame may break even under light stress.

1 Take pedelec out of service.

2 Send frame to a fibre composite repair company or purchase new frame as specified in the parts list.

8.5.2 Checking the pannier rack

Scratches, cracks and breaks may appear on the pannier rack caused by the panniers and cargo boxes.

1 Examine pannier rack for scratches, cracks and breaks.

➤ Replace damaged pannier racks.

➤ If the paint protection film is missing or has worn away, affix a new paint protection film.

8.5.3 Servicing axle with quick release

1 Undo quick release.

2 Fasten quick release.

3 Check the position and clamping force of the quick release lever.

Caution

Crash caused by unfastened quick release

A faulty or incorrectly installed quick release may become caught in the brake disc and block the wheel. This will cause a crash.

➤ Install the front wheel quick release lever on the opposite side to the brake disc.

Crash caused by faulty or incorrectly installed quick release

The brake disc becomes very hot during operation. Parts of the quick release may become damaged as a result. The quick release comes loose. This will cause a crash with injuries.

➤ The front wheel quick release lever and the brake disc must be situated on opposite sides.

Crash caused by incorrectly set clamping force

Excessively high clamping force will damage the quick release and cause it to lose its function.

Insufficient clamping force will cause a detrimental transmission of force. The suspension fork or the frame may break. This will cause a crash with serious injuries.

➤ Never fasten a quick release using a tool (e.g. hammer or pliers).

➤ Only use the clamping lever with the specified set clamping force.

1 Undo quick release.

2 Fasten quick release.

3 Check the position and clamping force of the quick release lever.
The quick release lever is flush with the lower housing.
You should be able to see slight impression on the palm of your hand when you close the quick release lever.

Figure 146: Adjusting the quick release clamping force

4 Use a 4 mm hexagon socket spanner to adjust the clamping lever clamping force if required.
5 Check the quick release lever position and clamping force again.

Figure 147: Adjusting the quick release clamping force

8.5.4 Maintaining the stem
Incorrectly fastened screws may come loose due to impact. The stem may no longer be firmly fixed in its position as a result. This will cause a crash with injuries.

- Check the handlebars and the stem’s quick release are firmly in position.

8.5.5 Servicing the gear hub
8.5.5.1 Adjusting the hub with cone bearing
In the case of hubs with a cone bearing, the bearing shell fixed in the hub cone body rotates with its larger ball bearing surfaces around the inner bearing cone resting against the fork end. The outer bearing shell rotating around the stationary bearing cone is subject to considerably more evenly distributed loads thanks to its larger ball running surface.

1 Attach a small, red colour marking on the lock nut.
2 Turn the wheel axle 40° to 90° every 1,000 to 2,000 km.
- The bearing cone is subject to evenly distributed loads.
8.5.6 Servicing the steering headset

1. Remove fork.
2. Clean steering headset. If it is very dirty, flush the bearing with cleaning agents such as WD-40 or Karamba.
3. Check steering headset for damage.
   - If the steering headset is damaged, replace steering headset as specified in the parts list.
4. Grease steering headset and bearing seat with highly viscous, water-repellent grease (e.g. Dura Ace special grease by SHIMANO).
5. Re-fit fork with steering headset as per fork instructions.

8.5.7 Servicing the fork

Only applies to pedelecs with this equipment

**WARNING**

Injury due to explosion

The air chamber is pressurised. If the air system in a faulty suspension fork is maintained, it can explode and cause serious injury.

- Wear safety goggles, protective gloves and safety clothing when assembling or carrying out maintenance on the bicycle.
- Release the air for the air chambers. Detach all air insert fitments.
- Never service or dismantle a suspension fork if it has not completely rebounded.

**CAUTION**

Hazard for the environment due to toxic substances

The suspension fork contains toxic and environmentally harmful oils and lubricants. Such fluids will contaminate if they enter the sewers or groundwater.

- Dispose of lubricants and oils left over after repairs in an environmentally responsible way in accordance with statutory regulations.

1. Remove fork.
2. Check fork for cracks, warping and damage to the paintwork.
   - If there are any cracks, warping or damage to the paintwork, remove the pedelec from service. New fork as specified in the parts list.
3. Clean inside and exterior.
5. Install fork.
8.5.7.1 Servicing the carbon suspension fork

1. Remove fork.
2. Check fork for cracks, warping and damage to the paintwork.
3. You need to distinguish between scratches on the paintwork and impacts if the carbon suspension fork paintwork is damaged.
   ▶ Ask customer what caused the damage.
   ▶ Examine damage with a magnifying glass to see if fibres are permanently damaged.

Damage to paintwork

1. Gently sand paintwork damage with 600-grit sandpaper.
2. Smooth edges.
3. Apply one or two coats of repair paint.

Damage from impact

There may be damage to the laminate beneath the paintwork in the case of impact damage. The fork may break even under light stress.

▶ Take pedelec out of service. New fork as specified in the parts list.

爱奇 The fork must be free from any defects.

4. Clean inside and exterior.
5. Grease fork.
6. Install fork.

8.5.7.2 Servicing the suspension fork

1. Remove fork.
2. Check fork for cracks, warping and damage to the paintwork.

爱奇 If there are any cracks, warping or damage to the paintwork, remove the pedelec from service. New fork as specified in the parts list.

3. Dismantle suspension fork.
4. Lubricate dust seals and slide bushings.
5. Check torques.
6. Clean inside and exterior.
7. Grease fork.
8. Install fork.
9. Adjust suspension fork (see Section 6.3.14).
8.5.8 Servicing seat post

1. Remove seat post from the frame.
2. Clean seat post on the inside and outside.
3. Examine seat post rack for scratches, cracks and breaks.
   ▶ Replaced damaged seat post as specified in the parts list.
   ▶ If the paint protection film is missing or has worn away, affix a new paint protection film.
4. Fit seat post as per height specifications in the pedelec pass.

8.5.8.1 Servicing the carbon seat post

Only applies to pedelecs with this equipment

You need to distinguish between scratches on the paintwork and impacts if the carbon seat post paintwork is damaged.

▶ Ask customer what caused the damage.
▶ Examine damage with a magnifying glass to see if fibres are permanently damaged.

Damage to paintwork

1. Gently sand paintwork damage with 600-grit sandpaper.
2. Smooth edges.
3. Apply one or two coats of repair paint.

Damage from impact

There may be damage to the laminate beneath the paintwork in the case of impact damage. The carbon seat post may break even under light stress.

1. Take pedelec out of service.
2. New carbon seat post as specified in the parts list.

Intoxication from lubrication oil

The lubrication oil for eightpins seat posts is toxic if touched or inhaled.

▶ Always wear safety goggles and nitrile gloves when working with lubrication oil.
▶ Lubricate seat post in the open air or in a well-ventilated room only.
▶ Avoid skin coming into contact with lubrication oil. Wear nitrile gloves when lubricating, cleaning and servicing the vehicle.
▶ Use an oil catchment tray under the section where the seat post is serviced.

WARNING
8.5.8.2 by.schulz suspension seat post
Only applies to pedelecs with this equipment
1. Remove seat post from the frame.
2. Remove safety and protective cover.
3. Clean seat post on the inside and outside.
4. Examine seat post rack for scratches, cracks and breaks.
   ▶ Replaced damaged seat post as specified in the parts list.
   ▶ If the paint protection film is missing or has worn away, affix a new paint protection film.
5. Lubricate screws in the parallel suspension.
6. Reinsert seat post as per height specifications in the pedelec pass. Check screws for correct tightening torques.

7. Put on safety and protective cover.

8.5.8.3 Suntour suspension seat post
Only applies to pedelecs with this equipment
1. Remove seat post from the frame.
2. Remove safety and protective cover.
3. Examine seat post rack for scratches, cracks and breaks.
   ▶ Replaced damaged seat post as specified in the parts list.
   ▶ If the paint protection film is missing or has worn away, affix a new paint protection film.
4. Undo pre-tensioning adjuster and take out steel spring.
5. Clean seat post on inside and outside.
7. Lubricate pressure roller with bike chain oil.
   ▶ Lubricate articulated joints in parallel suspension with bike chain oil.
8. Reinsert seat post as per height specifications in the pedelec pass.
9. Check screws for correct tightening torques.

8.5.8.4 eightpins NGS2 seat post

Only applies to pedelecs with this equipment

Removing the seat post

1 Use a 2.5 mm hex key to turn the height adjustment 45° anti-clockwise and move to the “Open position”.

![Figure 149: Moving height adjustment to the “Open position”](image)

2 Activate operating lever. Pull seat post upwards at the same time and remove completely.

![Figure 150: Pulling the seat post out](image)

3 Activate operating lever. Hold Bowden cable fastener and pull or tilt forwards. Remove outer sleeve from the seat post remote control.

![Figure 151: Removing the cartridge](image)

4 Use a 5 mm to undo Postpin axle and pull out.

![Figure 152: Undipping the Postpin axle](image)

5 Pull cartridge from the piston rod while pushing the outer sleeve into the frame at the same time to help.

![Figure 153: Pulling the cartridge out](image)

6 Hold the cartridge with one hand at the height of the mechanism and pull the Bowden cable straight down with the other.

7 Hold the white actuating slide in the locking mechanism with your thumb.

8 Carefully push the Bowden cable upwards with the other hand and detach it.

![Figure 154: Detaching the Bowden cable](image)

**Notice**

Never pull Bowden cable forwards at an angle.

![Figure 155: Bowden cable position](image)
9 Pull out the outer sleeve end cap from the counter support on the Postpin interface on the seat post.

Caring for the outer sleeve
1 Detach spring washer or outer sealing ring.

Figure 156: Pulling the end cap out

Removing the outer sleeve and slide bushing
2 Use a 3 mm hex spanner to remove attachment screw on the outer sleeve.
3 Detach outer sleeve by pulling upwards with your hand.
4 Pull slide bushing tube out of the seat tube.

Figure 157: Removing the outer sleeve and slide bushing

Caring for the outer sleeve
2 Carefully remove the wiper from the groove.

Figure 158: Removed spring washer

3 Carefully remove the wiper from the groove.
4 Use a small, sharp object to look for and remove the end of the felt ring.
5 Remove felt ring.
6 Clean or replace felt ring.

Figure 159: Removing the wiper

Figure 160: Removing the felt ring

7 Clean inside of outer sleeve with a cloth.

Figure 161: Cleaning the outer sleeve
8 Carefully re-insert dry felt ring with one end in the designated groove.
9 Unfurl felt ring within the outer sleeve, so that it lies on the groove.
10 Carefully press felt ring into the groove by hand. Ensure that both ends are fully pressed in and meet and that they do not overlap and are not twisted.

Figure 162: Inserting the felt ring

11 Insert cleaned or new wiper in the upper groove.
12 Stretch spring washer over the wiper.

Figure 163: inserting and fastening the wiper

Cleaning the slide bushing
1 Clean the slide bushing tube with a damp cloth.

Figure 164: Cleaning the slide bushing tube

Notice
- Do not squash. The slide bushing tube wall is very thin.

Increasing the air pressure
1 Use 3 mm hex spanner to unscrew valve cap.

Figure 165: Unscrewing the valve cap

2 Screw valve adapter into mounting interface from below.

Figure 166: Screwing the valve adapter in

3 Use compression pump to pump the cartridge up to 24 bar.

Figure 167: Pumping the cartridge up

Notice
Screwing in the valve adapter will not open the valve. No pressure is displayed. The pressure is displayed when you start pumping.

4 Unscrew pump and valve adapter.
5 Use a 3 mm hex spanner to screw the valve lid back on and tighten with a maximum of 0.5 Nm.

Figure 168: Fastening the cartridge valve lid

Notice
► The cartridge is not airtight without the valve lid.

3 Set the torque to 18 Nm with a torque wrench and a 6 mm hex bit with a shaft length of at least 25 mm. Rotate clockwise.

Figure 171: Setting in a clockwise direction

4 Use a 3 mm hex spanner to screw the valve lid on and tighten with a maximum of 0.5 Nm.

Figure 172: Fastening the cartridge valve lid

Notice
► The cartridge is not airtight without the valve lid.

Setting the slipper clutch
1 Use 3 mm hex spanner to unscrew valve cap.

Figure 169: Unscrewing the valve cap

2 Secure the mounting interface against twisting with a 24 mm open-end spanner.

Figure 170: Securing against twisting
installing the outer sleeve and slide bushing

1. Carefully push slide bushing tube into the seat tube.
2. Press outer sleeve downwards with your hand.
3. Use a 3 mm hex spanner to fasten the attachment screw on the outer sleeve.

Figure 173: Fitting the slide bushing and outer sleeve

Fitting the seat post

1. Attach the outer sleeve end cap in the counterholder on the seat post frame interface.

Figure 174: Attaching the end cap

2. Use both thumbs to push white activation slider downwards and hold with one thumb.

Figure 175: Pushing the white activation slider downwards

3. Attach Bowden cable with the nipple to the bracket for the Bowden cable.

Figure 176: Correct and incorrect Bowden cable

Notice

Never pull Bowden cable forwards at an angle.

4. Carefully push cartridge into the seat tube. Pull the Bowden cable out of the frame to help.

Figure 177: Fastening the cartridge valve lid

Notice

Before continuing with installation, ensure that the Bowden cable is fed into the middle of the longitudinal guide. If the Bowden cable is off-centre, it will be pinched by the tube.

5. Look at the frame interface through the hole in the Postpin. Push the cartridge down until the Postpin mounting interface on the seat post reaches the Postpin interface on the frame.

6. If necessary, turn the seat post slightly and push it to the correct position so that the Postpin axle can be inserted.

Figure 178: Fastening the cartridge valve lid

7. Use a 5 mm hex spanner to screw in Postpin axle and fasten slightly.

8. Use torque spanner to tighten Postpin axle with 8 Nm.

Figure 179: Fastening the Postpin axle
9 Carefully insert slide bushing tube into the seat tube.

Figure 180: Inserting the slide bushing tube into the seat tube

10 Place outer sleeve on the seat tube and push downwards firmly.

Figure 181: Attaching the outer sleeve

11 Turn the outer sleeve so that the outer sleeve mounting hole is aligned with the fastening hole in the frame.

12 Use a 3 mm hex spanner to fasten the M5 attachment screw into the outer sleeve.

13 Tighten screw gently with a maximum torque of 0.5 Nm.

> The screw must easily screw into the outer sleeve without any resistance. If this is not the case, the hole in the frame is not aligned with the mounting hole in the outer sleeve. Turn outer sleeve into the right position.

Figure 182: Fastening the outer sleeve

14 Feed height adjustment clamp into the seat tube.

> The two height adjustment clamp guides are in the longitudinal grooves inside the seat post.

Figure 183: Feeding the height adjustment clamp in

15 Push the seat post carefully downwards and feed into the wiper.

Figure 184: Pushing the seat post downwards

Notice

Never let the seat post tube collide with the piston rod. There is a risk of scratches and damage to the piston rod. This will cause loss of air.

16 Move operating lever and press seat post downwards to the required height as per the values in the pedelec pass.

Figure 185: Setting the seat post height

17 Turn the height adjustment mechanism 45° in a clockwise direction and place in the “Closed position”.

Figure 186: Closing the height adjustment
8.5.8.5 eightpins H01 seat post

Only applies to pedelecs with this equipment

Removing the seat post

1 Use a 5 mm hex spanner to unscrew the Postpin axle.

![Figure 187: Undoing the seat post](image)

- Detach Bowden cable from the on-bar remote control on the seat post.
- Detach the operating lever from the handlebars in the case of under-bar-remote control on the seat post. Activate operating lever. Hold Bowden cable fastener and pull or tilt forwards.

![Figure 188: Unfastening the remote control](image)

2 Pull seat post slowly out of the frame.

![Figure 189: Removing the seat post](image)

3 Pull out the special end cap for the outer sleeve from the bracket.

4 Detach the Bowden cable head from the hydraulic activation lever bracket.

5 If necessary, operate the lever by hand to make more space for detaching it.

![Figure 190: Removing the Bowden cable](image)

Removing the outer sleeve and slide bushing

1 Use a 3 mm hex spanner to remove attachment screw on the outer sleeve.

2 Detach outer sleeve by pulling upwards with your hand.

3 Pull slide bushing tube out of the seat tube.

![Figure 191: Removing the outer sleeve and slide bushing](image)

Caring for the outer sleeve

1 Push the blue wiper towards the edge.

2 Detach the seal lip ring.

![Figure 192: Detaching the seal lip ring](image)

3 Detach spring washer or outer sealing ring.

![Figure 193: Removed spring washer](image)
4 Carefully remove the wiper from the groove.

Figure 194: Removing the wiper

5 Use a small, sharp object to look for and remove the end of the felt ring.

6 Carefully take out the felt ring.

7 Remove felt ring.

8 Clean or replace felt ring.

Figure 195: Removing the felt ring

9 Clean inside of outer sleeve with a cloth.

Figure 196: Cleaning the outer sleeve

10 Carefully re-insert dry felt ring with one end in the designated groove.

11 Unfurl felt ring within the outer sleeve, so that it lies on the groove.

12 Carefully press felt ring into the groove by hand. Ensure that both ends are fully pressed in and meet and that they do not overlap and are not twisted.

Figure 197: Inserting the felt ring

13 Insert cleaned or new wiper in the upper groove.

14 Stretch spring washer over the wiper.

Figure 198: inserting and fastening the wiper
Clean slide bushing

1. Clean the slide bushing tube with a damp cloth.

![Figure 199: Cleaning the slide bushing tube](image1)

**Notice**

- Do not squash. The slide bushing tube wall is very thin.

Cleaning and lubricating the guide grooves

1. Push the operating lever forwards.

![Figure 200: Opening the height adjustment](image2)

2. Pull seat post out with your hand until it will go no further.

![Figure 201: Pulling the seat post out](image3)

3. Clean the seat post longitudinal grooves with a damp cloth.

![Figure 202: Cleaning the longitudinal groove](image4)

4. Apply grease into the longitudinal groove and on both cross-pieces.

![Figure 203: Applying grease](image5)

5. Push seat post together.

![Figure 204: Pushing the seat post together](image6)

6. Push the height adjustment operating lever backwards.

![Figure 205: Closing the height adjustment](image7)
installing the outer sleeve and slide bushing

1. Carefully push slide bushing tube into the seat tube.
2. Press outer sleeve downwards with your hand.
3. Use a 3 mm hex spanner to fasten the attachment screw on the outer sleeve.

Figure 206: Fitting the slide bushing and outer sleeve

Fitting the seat post

1. Attach Bowden cable head to the hydraulic activation lever bracket.
2. Push special end cap for the outer sleeve into the holder on the mounting interface.
3. Carefully push the seat post into the frame. In doing so, ensure that the wiper and the slide bushing do not become damaged.
4. Hold the Bowden cable firmly on the handlebars while feeding it in. Carefully pull the end of the Bowden cable from the frame so that the seat post slides downwards unhindered.

Figure 207: Attaching and pushing in the seat post

5. Look at the frame interface through the hole in the Postpin. Push the seat post down until the Postpin mounting interface on the seat post reaches the Postpin interface on the frame.

Figure 209: Hole in the Postpin interface

6. If necessary, turn the seat post slightly and push it to the correct position so that the Postpin axle can be inserted.
7. Use a 5 mm hex spanner to screw in Postpin axle and fasten slightly.
8. Straighten saddle.
9. Use torque spanner to tighten Postpin axle with 8 Nm.

Figure 210: Screwing the seat post into position
8.5.9 Rear frame damper

Only applies to pedelecs with this equipment

---

**WARNING**

Injury due to explosion

The air chamber is pressurised. If the air system is serviced in a rear frame damper, it can explode and cause serious injury.

- Wear safety goggles, protective gloves and safety clothing when assembling or carrying out maintenance on the bicycle.
- Release the air for the air chambers. Detach all air insert fitments.
- Never service or dismantle a rear frame damper if it has not completely rebounded.

**CAUTION**

Hazard for the environment due to toxic substances

The rear frame damper contains toxic and environmentally harmful oils and lubricants. Such fluids will contaminate if they enter the sewers or groundwater.

- Dispose of lubricants and oils left over after repairs in an environmentally responsible way in accordance with statutory regulations.

---

1 Dismantle the rear frame damper.
2 Clean and inspect its interior and exterior.
3 Recondition air springs.
4 Replace airtight seals on air springs.
5 Change oil.
6 Replace dust wipers.

---

**Intoxication from suspension oil**

Suspension oil is poisonous to the touch, irritates respiratory tracts and causes cancer, sterility and mutation in germ cells.

- Always wear safety goggles and nitrile gloves when carrying suspension oil.
- Never perform maintenance when you are pregnant.
- Use an oil catchment tray under the section where the rear frame damper is being serviced.

**Intoxication from lubrication oil**

The lubrication oil for eightpins seat posts is toxic if touched or inhaled.

- Always wear safety goggles and nitrile gloves when working with lubrication oil.
- Lubricate seat post in the open air or in a well-ventilated room only.
- Avoid skin coming into contact with lubrication oil. Wear nitrile gloves when lubricating, cleaning and servicing the vehicle.
- Use an oil catchment tray under the section where the seat post is serviced.
8.5.9.1 FOX component-specific maintenance

FOX Service must perform maintenance on suspension forks, rear frame dampers and suspension seat posts.

- Maintenance includes a complete inspection of interiors/exteriors.
- All dampers are reconditioned.
- The airtight seals are replaced in air suspension forks.
- The air spring is reconditioned.
- The oil is changed.
- The dust wipers are replaced.

9 Troubleshooting, fault clearance and repair

9.1 Troubleshooting and fault clearance

The control panel indicates whether a critical or less critical error has arisen in the drive system.

The error messages generated by the drive system can be read in the eBike Flow app and by the specialist dealer.

The rider can use a link in the eBike Flow app to display all information on errors and assistance on eliminating errors.

9.1.1 Drive system or on-board computer does not start up

If the on-board computer and/or the drive system do not start up, proceed as follows:

1 Check whether the battery is switched on. If not, start the battery.
   ➔ Contact your specialist dealer if the battery level indicator LEDs do not light up.

2 If the LEDs on the Battery Level indicator light up, but the drive system does not start, remove the battery.

3 Insert the battery.

4 Start the drive system.

5 If the drive system does not start up, remove the battery.

6 Clean all the contacts with a soft cloth.

7 Insert the battery.

8 Start the drive system.

9 If the drive system does not start up, remove the battery.

10 Fully charge the battery.

11 Insert the battery.

12 Start the drive system.

13 If the drive system does not start, press the On-Off button (control panel) for at least 8 seconds.

14 If the drive system does not start after about 6 seconds, press the On-Off button (control panel) for at least 2 seconds.

15 Contact your specialist dealer if the drive system won’t start.

</tr>
</tbody>
</table>

Table 52: Other drive system errors
9.1.7 Suntour suspension fork

9.1.7.1 Rebound too fast

The suspension fork rebounds too quickly, producing a "pogo stick" effect, where the wheel lifts from the ground in an uncontrolled way. This impairs traction and control (blue line). Fork head and handlebars are deflected upwards if the wheel bounces back from the ground. Body weight may be thrown up and back in an uncontrolled way (green line).

Figure 211: Suspension fork rebounding too quickly

Solution

Figure 212: Suntour rebound screw (1)

▶ Turn rebound screw in a clockwise direction.
▶ The rebound speed is decreased (slower return).
9.1.7.2 Rebounding too slowly

The fork does not rebound quickly enough after absorbing a bump. The fork also remains deflected over subsequent bumps, which reduces deflection and increases the hardness of impacts. Available deflection, traction and control decrease (blue line).

![Suspension fork rebounding too slowly](image)

Solution

![Suntour rebound screw (1)](image)

- Turn **rebound screw** in an anti-clockwise direction.
- The rebound speed is increased (faster return).
9.1.7.3 Suspension too soft on inclines
The fork deflects at a low point in the terrain. The deflection is quickly used up, body weight shifts forward and the pedelec loses some momentum.

Figure 215: Excessively soft suspension in the suspension fork on hilly terrain

Solution

Figure 216: Changing compression adjuster to a harder setting

> Turn compression adjuster in a clockwise direction towards LOCK.

♀ The damping and compression hardness are increased and the deflection stroke speed. Efficiency on hilly and flat terrain is improved.
9.1.7.4 Excessively hard damping on bumps

When the bike hits a bump, the fork deflects too slowly and the wheel lifts up from the bump. Traction decreases when the wheel no longer touches the ground. The headset and handlebars are deflected upwards significantly, which can impair control.

Figure 217: Excessively hard damping in the suspension fork on bumps

Solution

Figure 218: Changing compression adjuster to a softer setting

- Turn compression adjuster in a clockwise direction towards OPEN.
- The damping and compression hardness reduces and the deflection stroke speed is reduced. Sensitivity to small bumps is increased.
9.1.8 Rear frame damper

9.1.8.1 Rebound too fast

The rear frame damper rebounds too quickly, producing a “pogo stick” effect or causing the bike to bounce after the wheel hits a bump and lands on the ground again. This impairs traction and control due to the uncontrolled speed at which the damper rebounds after deflecting (blue line). Saddle and handlebars are deflected upwards when the wheel bounces back from the ground. The rider’s body weight may be shifted upwards and forwards if the damper fully rebounds too quickly (green line).

Figure 219: Rear frame damper rebounding too quickly

Solution

Figure 220: Suntour rebound adjuster wheel (1) on the rear frame damper

- Turn **rebound wheel** towards plus.
- The deflection movement is reduced.
9.1.8.2 Rebounding too slowly

The rear frame damper does not rebound quickly enough after a bump has been compensated and is not in the required initial position when the wheel hits the next bump. The rear frame damper remains compressed during successive bumps, thus reducing deflection and ground contact and increasing hardness on the next impact. The rear wheel bounces off the second bump since the rear frame damper does not rebound quickly enough to make contact with the ground and return to the initial position again. The available deflection and traction are reduced (blue line).

The rear frame damper remains in a deflected state after contact with the first bump. When the rear wheel hits the second bump, the saddle follows the path of the rear wheel instead of remaining in a horizontal position. The available deflection and potential absorption of bumps are reduced, which causes instability and loss of control during successive bumps (green line).

Solution

- Turn rebound wheel towards minus.
- The rebound movement is increased.
9.1.8.3 Suspension too soft on inclines

The rear frame damper deflects deeply through the deflection range. Deflection is quickly used up, the rider's weight shifts forward and the bicycle loses some momentum.

Figure 223: Excessively soft suspension in the rear frame damper on hilly terrain

Solution

Figure 224: Suntour compression adjuster (1) on the rear frame damper

- Turn compression adjuster clockwise.
- The damping and compression hardness is increased and the deflection stroke speed is reduced. Efficiency on hilly and flat terrain is improved.
9.1.8.4 Excessively hard damping on bumps

When the bike hits a bump, the damper deflects too slowly and the rear wheel lifts up from the bump. Traction is reduced (blue line).

Saddle and rider are deflected upwards and forwards, the rear wheel loses contact with the ground and control is reduced (green line).

Figure 225: Excessively hard damping in the rear frame damper on bumps

Solution

Figure 226: Suntour compression adjuster (1) on the rear frame damper

- Turn compression adjuster anti-clockwise.
- The damping and compression hardness is reduced and the deflection stroke speed is increased. Sensitivity to small bumps is increased.
9.2 Repair

Special expertise and tools are required for many repairs. For this reason, repairs may only be carried out at a specialist dealer. These include:

- Replacing tyres and rims
- Replacing rims, brake linings and brake discs
- Replacing and tensioning the chain.

9.2.1 Original parts and lubricants

The individual pedelec parts have been carefully selected and matched to one other.

Only original parts and lubricants must be used for maintenance and repair.

The constantly updated accessory approval and parts lists are in Section 11, Documents and Drawings.

▷ Follow the operating instructions for the new components.

9.2.2 Replacing the lighting

▷ Only use components of the respective power class for replacement.

9.2.3 Setting the front light

▷ The front light must be set so that its light beam shines on the road 10 m in front of the pedelec.

9.2.4 Checking tyre clearance

The tyre needs to be checked each time a suspension fork tyre is changed to another size.

1 Release pressure from the fork.
2 Press fork together fully.
3 Measure the gap between the top of the tyre and the crown's lower surface. The gap must not be less than 10 mm. If the tyre is too large, the tyre will touch the crown's lower surface if the fork is fully pressed together.
4 Release pressure on fork and pump it up again if it is an air suspension fork.
5 Take into account the fact that the gap will be smaller if there is a guard. Check again to ensure that there is sufficient clearance for the tyre.
9.2.5 Replacing pedelec components if lock function is installed

9.2.5.1 Replacing a smartphone

1 Install Bosch eBike connect app on the new smartphone.
2 Log on using the same account which was used to activate the lock function.
3 Connect on-board computer with the smartphone while the on-board computer is in use.
   ▶ The lock function is shown as set up in the BOSCH eBike Connect app.

9.2.5.2 Replacing the on-board computer

▶ Connect on-board computer with the smartphone while the on-board computer is in use.
   ▶ The lock function is shown as set up in the BOSCH eBike Connect app.

9.2.5.3 Activating the lock function after motor replacement

✓ The lock function is displayed as deactivated in the eBike Connect app when the motor has been replaced.
1 Open the <My eBike> menu item in the eBike Connect app.
2 Push the <Lock function> slider to the right.
   ▶ The drive unit assistance can now be deactivated by removing the on-board computer.
10 Recycling and disposal

This device is marked according to the European Directive 2012/19/EU on waste electrical and electronic equipment – WEEE and the European Directive 2006/66/EC on accumulators. The directive provides the framework for the return and recycling of used devices across the EU. Consumers are legally required to return all used batteries of any type. It is forbidden to dispose of batteries in domestic waste. The battery manufacturer is legally obliged to take back used and old batteries free of charge according to Section 9 German Batteries Act. The pedelec frame, battery, motor, on-board computer and charger are recyclable materials. You must dispose of and recycle them separately from the domestic waste in compliance with applicable statutory regulations. Separate collection and recycling saves reserves of raw materials and ensures that all the regulations for protection of health and the environment are adhered to when recycling the product and/or the battery.

► Never dismantle the pedelec, battery or charger for disposal.

The pedelec, on-board computer, the unopened and undamaged battery and the charger can be returned to any specialist dealer free of charge. Further disposal options may be available, depending on the region.

► Store the individual parts of the decommissioned pedelec in a dry place, free from frost, where they are protected from direct sunlight.

10.1 Removal of waste guidelines

<table>
<thead>
<tr>
<th>Waste type</th>
<th>Disposal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-hazardous waste</td>
<td>Recycling</td>
</tr>
<tr>
<td>Waste paper, cardboard</td>
<td>Return paper collection bin, paper container, undamaged transport packaging to suppliers</td>
</tr>
<tr>
<td>Scrap metal and aluminium</td>
<td>Take to municipal collection points or have collected by waste disposal companies</td>
</tr>
</tbody>
</table>
| Tyres, tubes | Tyre manufacturers’ collection points, collection forms and fax templates available from tyre manufacturers
Otherwise, residual waste bin (grey bin) |
| Fibre composite components (e.g. carbon, GRP) | Large carbon components such as defective frames and carbon rims can be sent to special collection points for recycling; see www.cfkr-cycling.de/index.php?id=57 |
| Dual system sales packaging made of plastic, metal and composite material, lightweight packaging | Collection by waste disposal firm where applicable; return transport packaging to suppliers
Plastic waste bin (yellow bin) |
| CDs, DVDs | Take to municipal collection points since they are made of high-grade plastic and are easy to recycle
Otherwise, residual waste bin (grey bin) |

11.4 Charger operating instructions

Charger
BPC3400

en Original operating instructions
4A Charger
Safety instructions

Read all the safety and general instructions. Failure to observe the safety and general instructions may result in electric shock, fire and/or serious injury.

Save all safety warnings and instructions for future reference.

The term battery is used in these instructions to mean all original Bosch eBike rechargeable battery packs.

- Do not expose the charger to rain or wet conditions. If water enters a charger, there is a risk of electric shock.
- Charge only Bosch lithium-ion batteries that are approved for use in eBikes. The battery voltage must match the battery charging voltage of the charger. Otherwise there is a danger of fire and explosion.
- Keep the charger clean. Dirt poses a risk of electric shock.
- Always check the charger, cable and plug before use. Stop using the charger if you discover any damage. Do not open the charger. Damaged chargers, cables and plugs increase the risk of electric shock.
- Do not operate the charger on an easily ignited surface (e.g. paper, textiles, etc.) or in a flammable environment. There is a risk of fire due to the charger heating up during operation.
- Take care if you touch the charger while it is charging. Wear protective gloves. The charger can get very hot, especially when the ambient temperature is high.
- The battery may give off fumes if it becomes damaged or is used incorrectly. Ensure the area is well ventilated and seek medical attention should you experience any adverse effects. The fumes may irritate the respiratory system.
- The eBike battery must not be left unattended while charging.
- Supervise children during use, cleaning and maintenance. This will ensure that children do not play with the charger.
- Children or persons who, owing to their physical, sensory or mental limitations or to their lack of experience or knowledge, are not capable of safely operating the charger may only use this charger under supervision or after having been instructed by a responsible person. Otherwise, there is a danger of operating errors and injuries.
- Read and observe the safety warnings and directions contained in all the eBike system operating instructions and in the operating instructions of your eBike.
- A sticker in English is adhered to the bottom of the charger (marked (4) in the diagram on the graphics page). This says:

Use ONLY with BOSCH lithium-ion rechargeable batteries!

Product description and specifications

Intended Use

In addition to the functions shown here, changes to software relating to troubleshooting and functional modifications may be introduced at any time.

The Bosch eBike chargers are intended exclusively for charging Bosch eBike batteries and must not be used for any other purpose.

Product features

The numbering of the components shown refers to the illustrations on the graphics pages at the beginning of the manual.

</tbody>
</table>

The specifications apply to a rated voltage (V) of 230 V. These specifications may vary at different voltages and in country-specific models.

Operation

Start-up

Connecting the charger to the mains (see figure A)

- Pay attention to the mains voltage. The voltage of the power source must match the voltage specified on the rating plate of the charger. Chargers marked 230 V can also be operated at 220 V.

Plug the device connector (3) of the power cable into the device socket (2) on the charger.

Connect the power cable (country-specific) to the mains.

Charging the removed battery (see figure B)

Switch the battery off and remove it from its holder on the ebike. When doing so, read and observe the operating instructions of the battery.

Ensure the battery is placed on clean surfaces only. Avoid getting dirt, e.g. sand or soil, in the charging socket and contacts in particular.

Plug the charging connector (5) of the charger into the socket (6) on the battery.

Charging the battery on the bike (see figure C)

Switch the battery off. Clean the cover of the charging socket (7). Avoid getting dirt, e.g. sand or soil, in the charging socket and contacts in particular. Lift the cover of the charging socket (7) and plug the charging connector (5) into the charging socket (6).

There is a risk of fire due to the charger heating up during charging. Ensure the battery on the bike is completely dry and placed on a fireproof surface before charging. If this is not possible, remove the battery from the holder and charge it in a more suitable location. When doing so, read and observe the operating instructions of the battery.

Charging process

The charging process begins as soon as the charger is connected to the battery or charging socket on the bike and to the mains.

Note: The charging process is only possible when the temperature of the ebike battery is within the permitted charging temperature range.

Note: The drive unit is deactivated during the charging process.

The battery can be charged with and without the on-board computer. When charging without the on-board computer, the charging procedure can be observed on the battery charge indicator.

When the on-board computer is connected, a charging notification appears on the display.

The state of charge is displayed by the battery charge indicator (8) on the battery and by the bars on the on-board computer.

The LEDs on the battery charge indicator (8) flash during the charging process. Each solid illuminated LED represents approximately 20 % of the charging capacity. The flashing LED indicates the next 20 % currently charging.

Once the ebike battery is fully charged, the LEDs go out immediately and the on-board computer is switched off. The charging process is terminated. The state of charge can be displayed for 5 seconds by pressing the on/off button (9) on the ebike battery.

Disconnect the charger from the mains and the battery from the charger.

When the battery is disconnected from the charger, the battery is automatically switched off.

Note: If you have charged the battery on the bike, carefully close the charging socket (6) with the cover (7) after charging, so that no dirt or water can get in.

If the charger is not disconnected from the battery after charging, after a few hours the charger will switch itself back on, check the state of charge of the battery and begin the charging procedure again if necessary.
Errors – causes and corrective measures

<table>
<thead>
<tr>
<th>Cause</th>
<th>Corrective measures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery defective</td>
<td>Two LEDs flash on the battery. Contact an authorised bike dealership.</td>
</tr>
<tr>
<td>Battery too warm or too cold</td>
<td>Three LEDs flash on the battery. Disconnect the battery from the charger until the charging temperature range has been reached. Do not reconnect the battery to the charger until it has reached the correct charging temperature.</td>
</tr>
<tr>
<td>The charger is not charging.</td>
<td>No LEDs flashing (one or more LEDs will remain permanently lit depending on the state of charge of the eBike battery). Contact an authorised bike dealership.</td>
</tr>

Maintenance and servicing

Maintenance and cleaning

If the charger fails, please contact an authorised bike dealership.

After-sales service and advice on using products

If you have any questions about the eBike system and its components, contact an authorised bicycle dealer. For contact details of authorised bike dealerships, please visit www.bosch-ebike.com.

Disposal

Chargers, accessories and packaging should be recycled in an environmentally friendly manner. Do not dispose of chargers along with household waste.

Only for EU countries:

According to the European Directive 2012/19/EU on Waste Electrical and Electronic Equipment and its implementation into national law, chargers that are no longer usable must be collected separately and disposed of in an environmentally friendly manner.

Subject to change without notice.

Bicycle for young adults
Source: ISO 4210-2: pedelec designed for use on public roads by a young adult whose weight is less than 40 kg, with maximum saddle height of 635 mm or more and less than 750 mm (see ISO 4210).

Brake lever
Source: EN 15194:2017: lever used to apply the brake.

Braking distance
Source: EN 15194:2017: distance travelled by a pedelec between the commencement of braking and the point at which the pedelec comes to rest.

Cargo bike
Source: DIN 79010: pedelec mainly designed to carry goods.

CE marking
Source: Directive on Machinery: the manufacturer uses the CE marking to declare that the pedelec complies with the applicable requirements.

City and trekking bicycles
Source: EN-ISO 4210 - 2: pedelec designed for use on public roads primarily for means of transport or leisure.

Consumables
Source: EN 82079-1: any part or material that is needed to continue using or maintain the product.

Continuous power rating
Source: ISO 15194:2017, output power specified by the manufacturer at which the motor reaches its thermal equilibrium under the specified ambient conditions.

Decommissioning

Disc brake
Source: EN 15194:2017: brake in which brake pads are used to grip the lateral faces of a thin disc attached to or incorporated into the wheel hub.

Drive belt
Source: EN 15194:2017: seamless ring belt which is used as a means of transmitting drive force.

Electrical control system
Source: EN 15194:2017: electronic and/or electrical component or an assembly of components provided for installation into a vehicle, together with all electrical connections and associated wiring for the motor electrical power assistance.

Electrically power assisted pedelec, pedelec
Source: EN 15194:2017: electrically power assisted cycle pedelec EPAC bicycles, equipped with pedals and an auxiliary electric motor, which cannot be propelled exclusively by means of the auxiliary electric motor, except in start-up assistance mode.

Emergency stop
Source: ISO 13850:2015, function or signal, designed: — to avert arising or reduce existing hazards to persons, damage to machinery or to work in progress; – to be initiated by a single human action.

Fault
Source: EN 13306:2018-02, 6.1: state of an item (4.2.1) characterized by inability to perform a required function (4.5.1), excluding the inability during preventive maintenance or other planned actions, or due to lack of external resources.

Folding bicycle
Source: ISO 4210-2: pedelec designed to fold into a compact form, making it easy to transport and store.
Fork steerer
Source: EN 15194:2017: part of a fork that rotates around the steering axis of a pedelec frame head tube. It is normally connected to the fork crown or directly to the fork legs, and is normally the point of connection between the fork and the handlebar stem.

Fracture
Source: EN 15194:2017: unintentional separation into two or more parts.

Maintenance
Source: DIN 31051: maintenance is generally performed at regular intervals and often carried out by trained technical staff. This ensures a maximum service life and low wear and tear for the maintained items. Proper maintenance is often also a pre-requisite for providing a warranty.

Manufacturer
Source: Directive 2006/42/EC on Machinery, 17.05.2006 Any natural or legal person who designs and/or manufactures machinery or partly completed machinery covered by this Directive and is responsible for the conformity of the machinery or the partly completed machinery with this Directive with a view to its being placed on the market, under his own name or trademark or for his own use.

Maximum continuous power rating
Source: ZEG: the maximum continuous power rating is the maximum power for the electric motor output shaft during 30 minutes.

Maximum permitted total weight
Source: EN 15194:2017: weight of the fully assembled pedelec plus the rider and baggage, as specified by the manufacturer.

Maximum saddle height
Source: EN 15194:2017: vertical distance from the ground to the point where the top of the seat surface is intersected by the seat-post axis, measured with the saddle in a horizontal position and with the seat-post set to the minimum insertion-depth mark.

Maximum tyre pressure
Source: EN 15194:2017: maximum tyre pressure recommended by the tyre or rim manufacturer for a safe and efficient performance. If the rim and tyre both indicate a maximum tyre pressure, the maximum inflation pressure is the lower of the two pressures indicated.

Minimum insertion depth
Source: EN 15194:2017: mark indicating the minimum insertion depth of handlebar stem into fork steerer (fork stem) or seat post into frame.

Model year
Source: ZEG: the model year refers to the first production year that the series-manufactured pedelec was manufactured in the version in question and is not always identical with the year of manufacture. The year of manufacture may be before the model year in some cases. If no technical modifications are introduced to the series, production may continue of pedelecs from a previous model year.

Mountain bike
Source: ISO 4210 - 2: pedelec designed for use off-road on rough terrain, on public roads, and on public pathways, equipped with a suitably strengthened frame and other components, and typically, with wide-section tyres with coarse tread patterns and a wide range of transmission gears.

Negative deflection
Negative deflection or sag is fork compression caused by body weight and gear (e.g. a backpack), their sitting position and the frame geometry.

Off-road rough terrain
Source: EN 15194:2017: rough gravel tracks, forest trails and other generally off-road tracks where tree roots and rocks are likely to be encountered.

Operating instructions
Source: ISO/DIS 20607:2018: part of the user information that machine manufacturers provide to machine operators; it contains guidance, instructions and tips related to the use of the machine in all its life cycle phases.
Placing on the market

*Source: Directive 2006/42/EC on Machinery, 17.05.2006, Making available for the first time in the Community machinery or partly completed machinery with a view to distribution or use, whether for reward or free of charge.*

Pressure point

*Source: ZEG: the pressure point on a brake is the point on the brake lever where the brake disc and brake pads respond and the braking process is initiated.*

Quick-release device, quick release

*Source: EN 15194:2017: lever actuated mechanism that connects, retains or secures a wheel or any other component.*

Racing bicycle

*Source: ISO 4210-2: pedelec designed for amateur rides at high speed and for use on public roads having a control and steering assembly with multiple grip positions to provide an aerodynamic posture Bicycle multi-speed transmission system and a tyre width not greater than 28 mm with the fully assembled bicycle having a maximum mass of 12 kg.*

Rebound

The rebound defines the speed at which the fork rebounds after being loaded.

Rechargeable battery, battery

*Source: DIN 40729:1985-05: a rechargeable battery is an energy storage device that can store supplied electrical energy as chemical energy (charging) and release it as electrical energy when required (discharging).*

Seat post

*Source: EN 15194:2017: component that clamps the saddle (with a bolt or assembly) and connects it to the frame.*

Serial number

*Source – ZEG: each pedelec has an eight-digit type number which is used to specify the design model year, the type and the version.*

Shut-off speed

*Source: EN 15194:2017: speed reached, by the pedelec, at the moment the current has dropped to zero or to the no load current value.*

Slippage

*Source: DIN 75204-1:1992-05: the difference in relation to vehicle speed between the vehicle speed and the speed of its wheels at their circumference.*

Spare part

*Source: EN 13306:2018-02, 3.5: item intended to replace a corresponding item in order to retain or maintain the original required function of the item.*

Suspension fork

*Source: EN 15194:2017: front wheel fork incorporating controlled, axial flexibility to reduce the transmission of road-shocks to the rider.*

Suspension frame

*Source: EN 15194:2017: frame incorporating controlled, vertical flexibility to reduce the transmission of road-shocks to the rider.*

Total deflection

*Source: Benny Wilbers, Werner Koch: Neue Fahrwerkstechnik im Detail (New chassis technology in detail): The distance that the wheel travels between an unloaded and a loaded position is called total deflection. When at rest, the vehicle's mass is applied to the springs and reduces the total deflection by the negative deflection to the positive deflection.*

Wear

*Source: DIN 31051: reduction in useful life (4.3.4), caused by chemical and/or physical processes.*

Weight of ready-to-ride pedelec

*Source: ZEG: the indicated weight for a ready-to-ride pedelec refers to the weight of a pedelec at the time of sale. The weight of each additional accessory must be added to this weight.*
Wheel
Source: ISO 4210 - 2: unit or combination of hub, rim and spokes or disc, but excluding tyre assembly.

Work environment
Source: ISO 9000:2015: set of conditions under which work is performed.

Year of manufacture
Source: ZEG: the year of manufacture is the year in which the pedelec was manufactured. The production period is always from May to July the following year.

Year of manufacture 2021 and year of manufacture 2022, complies with the following applicable EU provisions:

- Machinery Directive 2006/42/EC
- RoHS Directive 2011/65/EU
- Electromagnetic Compatibility Directive 2014/30/EU.

The safety objectives in the Low Voltage Directive 2014/35/EU have been met in compliance with Appendix I, No. 1.5.1 of the Machinery Directive 2006/42/EC.

The following harmonised standards have been applied:

- ISO 20607:2018 Safety machinery – Instruction handbook – General drafting principles
- EN 15194:2017, Cycles – Electrically power assisted cycles – EPAC Bicycles

The following other technical standards have been applied:

- EN 11243:2016: Cycles – Pannier racks for bicycles – Requirements and test methods

Cologne, 19/04/2021

Egbert Hageböck, Chairman, ZEG Zweirad-Einkaufs-Genossenschaft eG

II. Declaration of conformity with RED Directive

Robert Bosch GmbH, Bosch eBike Systems, hereby declares that the LED Remote radio system type complies with Directive 2014/53/EU. The complete EU declaration of conformity is available online at:
